# ETEM HISTORY

ETEM is a leading aluminium extrusion company. It was founded in 1971 as a part of the largest metal manufacturing holding in the Balkans. With over 40 years of experience ETEM is a fully integrated designer and producer of architectural systems and aluminium profiles for industrial applications.

Our mission is to listen and promptly respond to our customers' requests and design and manufacture aluminium products and systems, taking into consideration technical and aesthetic requirements.

ETEM focuses on sustainable development and has proven its concern about the protection of the natural environment by making considerable investments in anti-pollution measures and by optimizing production processes following the applicable standards of the European Union.

## SERVICES WE PROVIDE

ETEM supports you with the following:

- ▷ design of conventional and bespoke architectural system solutions
- ▷ innovative engineering in the field of curtain walls, ventilated facades, doors, windows
- ▷ professional consultation and adequate technical advices ensured by our engineering team with wide experience in the field of profile extrusion as well as architectural systems' engineering

- ▷ reliable customer care constant support trainings, technical support and audits on site
- ▷ high quality engineering which guarantees offering the best solution according to the specific features of every single project
- ▷ managing the process of certification in accordance with the applicable European standards in Notified Bodies
- ▷ production of non-standard length profiles and non-standard processing high quality powder coating

# ETEM PRODUCTS AND SUSTAINABLE DEVELOPMENT

SUSTAINABLE DEVELOPMENT IS DEVELOPMENT THAT MEETS THE NEEDS OF THE PRESENT WITHOUT COMPROMISING THE ABILITY OF FUTURE GENERATIONS TO MEET THEIR OWN NEEDS.\*

For many, sustainable development is about environmental conservation. This is true but it also includes two other aspects: a social aspect and an economic aspect.

Sustainable development means striking the right balance between economic development, social equity and environmental protection.

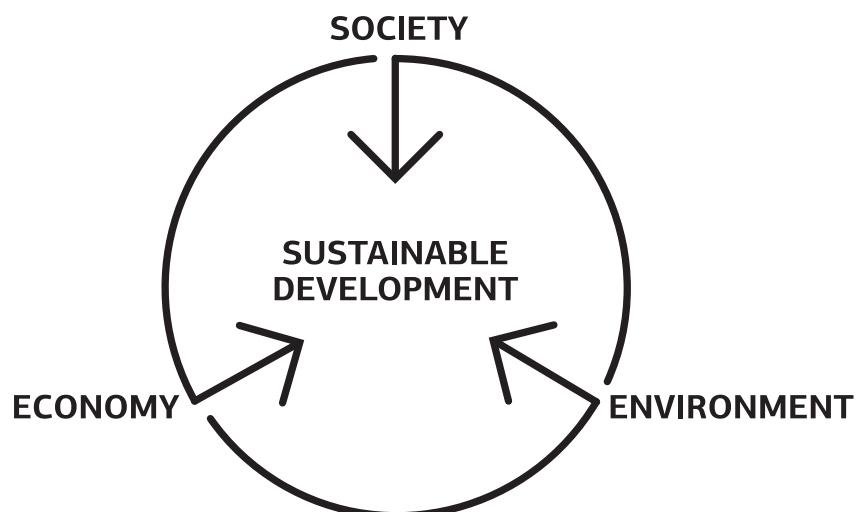

For us meeting this objective translates into the challenge of satisfying market demands at the lowest economic, social and environmental cost possible.

ETEM has always designed architectural systems which are in compliance with all requirements for achieving high energy efficiency.

In order to assure the comfort of the building inhabitants, ETEM systems adapt their functions to the changing environment.

As a moderator between outside and inside our systems provide:

- › ENERGY EFFICIENCY
- › DAYLIGHT
- › SUN-SHADING
- › VENTILATION AND GOOD AIR QUALITY
- › SAFETY AND SECURITY

CONCEPT / ADVANTAGES / CERTIFICATES

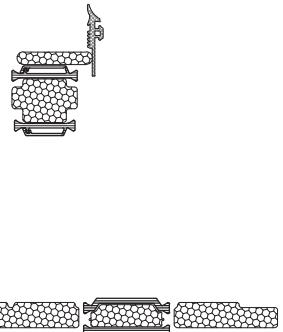

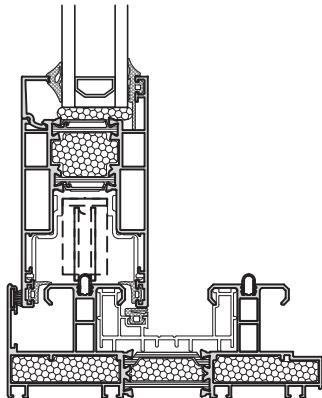

# E50 WINDOW CONCEPT

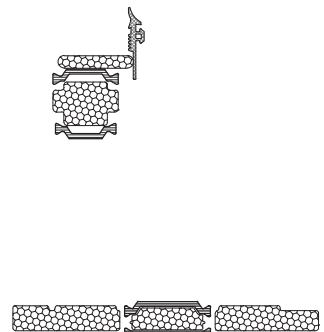

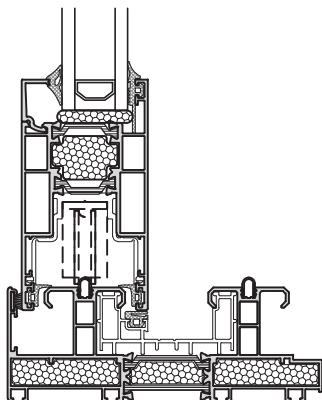

E50 IS A HIGH-END SLIDING WINDOW SYSTEM WITH THERMAL BREAK, SUITABLE FOR OPPOSED & POCKET BALCONY DOORS AND WINDOWS WITH HIGH REQUIREMENTS FOR THERMAL INSULATION, FUNCTIONALITY AND AESTHETICS.

- Elegant straight design
- Excellent water-tightness and air-permeability
- High thermal insulation
- Glazing sash with 50.0 mm width allowing glass panel from 23.0 up to 34.0 mm
- Ability of excellent view, using narrow interlock profile
- Ability of construction single and double vent pocket doors and windows
- Maximum weight per sash 200 kg
- Optimum design for excellent ratio of weight per linear meter

# COMPLIANCE WITH APPLICABLE REGULATIONS

## Production management

Quality Management system is certified in accordance with EN ISO 9001:2008.

Environmental management system is certified in accordance with EN ISO 14001.

Factory production control system is certified according to the requirements of EN 15088. All ETEM profiles are CE marked and in compliance with applicable European Standards.

ETEM is authorized to use the QUALICOAT quality sign for paint, lacquer and powder coating on aluminium for architectural applications.

Occupational Health & Safety Management System is certified in accordance with OHSAS 18001.

## PERFORMANCE CHARACTERISTICS OF E50

| Characteristic          | Classification / value        | Standard            |
|-------------------------|-------------------------------|---------------------|
| Air permeability        | Up to class 4                 | EN 1026 / EN 12207  |
| Watertightness          | Up to class E1200             | EN 1027 / EN 12208  |
| Resistance to wind load | Up to class C3                | EN 12211 / EN 12210 |
| Thermal transmittance   | from 2,04 W/m <sup>2</sup> .K | EN ISO 10077-2      |
| Sound insulation        | 41 (-1, -3) dB                | EN ISO 10140-2      |

# CLASSIFICATION OF CHARACTERISTICS

## for windows without resistance to fire and/or smoke leakage characteristics according to EN 14351-1

| Characteristic / value / dimension   | Classification / Value |   |            |               |             |               |                  |             |

# BUILDING PHYSICS

DIMENSIONING / FORMULAS / EXAMPLES

# ALUMINIUM AS MATERIAL

ALUMINIUM IS A VERY YOUNG METAL, EXTRACTED FOR THE FIRST TIME IN 1854. COMMERCIALLY PRODUCED AS A PRECIOUS METAL FROM 1886, ITS INDUSTRIAL PRODUCTION FOR CIVIL APPLICATIONS ONLY ACHIEVED WIDE USE IN THE 1950'S.

NOW ALUMINIUM PLAYS A KEY ROLE FOR THE SUSTAINABILITY OF NEW BUILDINGS AND THE RENOVATION OF EXISTING ONES. THANKS TO ITS PERFORMANCE PROPERTIES ALUMINIUM CONTRIBUTES TO THE ENERGY PERFORMANCE, SAFETY AND COMFORT OF NEW BUILDINGS.

## ADVANTAGES

### DESIGN FLEXIBILITY

The extrusion process offers an almost infinite range of forms and sections, allowing designers to integrate numerous functions into one profile

### LONG SERVICE LIFE

Aluminium building products are made from alloys that are weatherproof, corrosion-resistant and immune to the harmful effects of UV rays, ensuring optimal performance over a very long period of time

### HIGH STRENGTH-TO-WEIGHT RATIO

Thanks to the metal's inherent strength and stiffness, aluminium window and curtain wall frames can be very narrow. Material's light weight makes it easier to transport and handle on-site, reducing the risk of work-related injury

### HIGH-REFLECTIVITY

This characteristic feature makes aluminium a very efficient material for light management. Aluminium shading devices can be used to reduce the need for air conditioning in summer

### FIRE SAFETY

Aluminium does not burn and therefore is classified as a non-combustible construction material (European Fire Class A1). Aluminium alloys will nevertheless melt at around 6500 C, but without releasing harmful gases

### NO RELEASE OF DANGEROUS SUBSTANCES

Several studies have proved that aluminium building products do not present a hazard to occupants or the surrounding environment. Aluminium building products have no negative impact, either on indoor air quality or on soil, surface and groundwater

### OPTIMAL SECURITY

Where high security is required, specially designed, strengthened aluminium frames can be used. While the glass for such applications may well be heavy, the overall weight of the structure remains manageable thanks to the light weight of the aluminium frames.

# ALLOYS

Aluminium in its pure form is a very soft metal. Thanks to the addition of alloying elements such as copper, manganese, magnesium, zinc, etc. and thanks to suitable production processes, the physical and mechanical properties can be varied in a wide range to satisfy the requirements of a large number of different applications.

ETEM profiles are extruded from the following alloys:  
EN AW-1050 [Al 99.5]  
EN AW-6060 [Al Mg Si]  
EN AW-6063 [Al Mg0,7 Si]  
EN AW-6061 [Al Mg1 Si Cu]  
EN AW-6005 [Al Si Mg]  
EN AW-6082 [Al Si1 Mg Mn]

The most common aluminium alloy which is used by ETEM is EN AW 6063. Here are the properties of this alloy:

## MATERIAL PROPERTIES

|                                  |  |
|----------------------------------|--|
| Aluminium alloy                  | EN F22   |
| Ultimate tensile strength        | Rm = 210 N/mm <sup>2</sup>   |
| Yield strength                   | R <sub>p0.2</sub> = 160 N/mm <sup>2</sup>                          |
| Modulus of elasticity            | Eal=70 000 N/mm <sup>2</sup> = 7.10 <sup>9</sup> kg/m <sup>2</sup> |
| Coefficient of thermal expansion | α=0.023 mm/m .K (up to 1.2 mm/m for difference up to 50°C)         |

# EXTRUSION PROCESS

ETEM profiles are obtained through extrusion process, which consists of pushing a hot cylindrical bullet of aluminium through a shaped die. The extrusion process offers almost infinite range of forms and sections, allowing our designers to integrate numerous functions into one single profile.

aluminium surface, increasing hardness, corrosion and abrasion resistance. Anodizing gives a very decorative silver matt surface finish, and colored can also be obtained by sealing metallic dyes into the anodized layer.

# FINISHING

## POWDER COATING

It is a type of paint that is applied as a dry powder. Coating is applied on ETEM profiles electrostatically and then is cured under heat to allow it to flow and form a "skin". ETEM is authorized to use the quality sign QUALICOAT for powder coatings on aluminium for architectural applications. A wide range of colors and gloss levels can be achieved. ETEM also offers timber imitations painting, in addition to all RAL colors. The technology EZY provides the following colors: Golden Oak, Acero, Betulla, Mogano, Verde Scuro, Wenge, Noce Fiammato, Noce Chiaro, Ciliegio Rosso, Acacia Scuro, Ciliegio Antico, Noce Reale, Ciliegio Reale.

# MAINTENANCE

Apart from routine cleaning for aesthetic reasons, ETEM aluminium profiles do not require any maintenance which translates into a major cost and ecological advantage over lifetime of the product.

# RECYCLING

Aluminium scrap can be repeatedly recycled without any loss of value or properties. In many instances, aluminium is combined with other materials such as steel or plastics, which are most frequently mechanically separated from aluminium before being molten.

## ANODIZING

It is an electrochemical process whereby to reinforce the natural oxide film on the

# WIND LOAD

Wind action

The main influence over the facade is wind action, which depends mainly on the height of the curtain wall and location.

As a guideline, the wind pressure values with respect to the structure height are given in the table below:

| Building Height | Wind Velocity | Wind Load            | Wind Pressure                                    | Wind Suction in a middle zone           |                   |  | Wind Suction in an edge zone                                  |                   |                   |
|-----------------|---------------|----------------------|--|---|-------------------|--|---|-------------------|-------------------|
| $h$             | $v$           | $q = \frac{V^2}{16}$ | $W_p* = 1.25 \times c_p \times q$<br>$c_p = 0.8$ | $h/b \leq 0.25$<br>$W_s = c_p \times q$ |                   | $h/b \geq 0.5$<br>$W_s = c_p \times q$ | $b/8 \leq 2 \text{ m}$<br>$W_s = c_p \times q$<br>$c_p = 2.0$ |                   |                   |
| m               | m/s           | kg/m <sup>2</sup>    | kg/m <sup>2</sup>                                | kg/m <sup>2</sup>                       | kg/m <sup>2</sup> | kg/m <sup>2</sup>                      | kg/m <sup>2</sup>   | kg/m <sup>2</sup> | kg/m <sup>2</sup> |
| 0 - 8           | 28.3          | 50                   | 0.5  | 50                                      | 0.5               | 25                                     | 0.25  | 35                | 0.35              |
| 8 - 20          | 35.8          | 80                   | 0.8  | 80                                      | 0.8               | 40                                     | 0.40  | 56                | 0.56              |

| > 100           | 45.6          | 130                  | 1.3  | 130                                     | 1.3               | 65                                     | 0.65  | 91                | 0.91              |
|                 |               |                      |  |   |                   |  |   | 100               | 1.0               |
|                 |               |                      |  |   |                   |  |   | 160               | 1.6               |
|                 |               |                      |  |   |                   |  |   | 220               | 2.2               |
|                 |               |                      |  |   |                   |  |   | 260               | 2.6               |

where:

$h$  - building height, m

$b$  - building width, m

$v$  - wind velocity, m/s

$q$  - wind load, kg/m<sup>2</sup> and kN/m<sup>2</sup>

$w_{p/s}$  - wind pressure / suction, kN/m<sup>2</sup>

$c_p$  - correction factor

\*Note: When calculating wind pressure  $w_p$  the load is increased with 25%

## UNITS CONVERTER

$$1 \text{ m} = 100 \text{ cm} = 1000 \text{ mm}$$

$$1 \text{ kg} = 10 \text{ N}$$

$$1 \text{ kN} = 100 \text{ kg} = 1000 \text{ N}$$

$$1 \text{ kg/m}^2 = 0.01 \text{ kN/m}^2$$

$$1 \text{ Pa} = 1 \text{ N/m}^2 = 0.1 \text{ kg/m}^2$$

$$1 \text{ kPa} = 1000 \text{ Pa} = 1 \text{ kN/m}^2 = 100 \text{ kg/m}^2$$

$$1 \text{ MPa} = 1000000 \text{ Pa} = 1000000 \text{ N/m}^2$$

$$1 \text{ MPa} = 1 \text{ N/mm}^2 = 0.1 \text{ kN/cm}^2 = 100000 \text{ kg/m}^2$$

## CALCULATION OF REQUIRED MOMENT OF INERTIA

### \* Wind load actions:

The required moment of inertia of a mullion due to the wind action is given by:

a) triangle load

$$\text{If } \frac{H}{c} \leq 1, J_{yc} \geq \frac{w(H/2) \cdot H^4 \cdot 10^8}{120 E_{al} f_{max}} \text{ cm}^4$$

or

b) trapezoid load

$$\text{If } \frac{H}{c} > 1, J_{yc} \geq \frac{w(c/2) \cdot H^4}{1920 E_{al} f_{max}} \cdot 10^8 \left[ 25 - 40 \frac{(c/2)^2}{H^2} + 16 \frac{(c/2)^4}{H^4} \right] \text{ cm}^4$$

Use the same method to calculate  $J_{yd}$

Total of required moment of inertia:

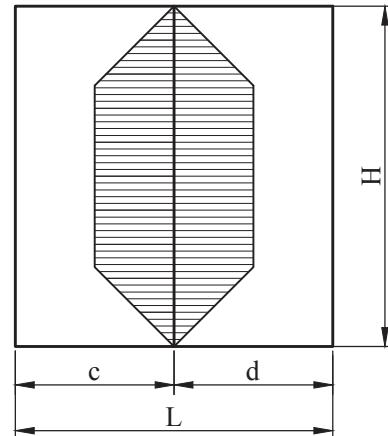

$$J_y = J_{yc} + J_{yd}, \text{ cm}^4$$

where:

- $J_y$  - Moment of inertia of a transom,
- $w$  - wind pressure,
- $E_{al}$  - Modulus of Elasticity of aluminium,
- $f_{max}$  - Maximum transom deflection,
- $H$  - Length of a mullion,
- $a, b$  - Distance between mullions,

cm<sup>4</sup>  
kg/m<sup>2</sup>  
kg/m<sup>2</sup>  
m  
m  
m

Example:

Initial data:

$$\begin{aligned} H &= 2,5 \text{ m} & w &= 120 \text{ kg/m}^2 \\ c &= 1,8 \text{ m} & E_{al} &= 7 \cdot 10^9 \text{ kg/m}^2 \\ d &= 1,8 \text{ m} \end{aligned}$$

$$f = \frac{H}{200} = \frac{2,5}{200} = 0,0125 \text{ m} \quad (\text{EN 14351-1})$$

$\Rightarrow f_{max} = 0,015 \text{ m}$  in the following formulas:

$$\frac{H}{c} = \frac{2,5}{1,8} = 1,39 > 1$$

$$\frac{H}{c} > 1, J_{yc} = \frac{w(c/2) H^4}{1920 E_{al} f_{max}} \cdot 10^8 \left[ 25 - 40 \frac{(c/2)^2}{H^2} + 16 \frac{(c/2)^4}{H^4} \right] \text{ cm}^4$$

$$J_{yc} = \frac{120 (1,8/2) 2,5^4}{1920 7 \cdot 10^9 0,015} \cdot 10^8 \left[ 25 - 40 \frac{(1,8/2)^2}{2,5^2} + 16 \frac{(1,8/2)^4}{2,5^4} \right] \Rightarrow J_{yc} = 42 \text{ cm}^4$$

$$\frac{H}{d} = \frac{2,5}{1,8} = 1,39 > 1$$

$$J_{yd} = \frac{w(d/2) H^4}{1920 E_{al} f} \cdot 10^8 \left[ 25 - 40 \frac{(d/2)^2}{H^2} + 16 \frac{(d/2)^4}{H^4} \right] \text{ cm}^4$$

$$J_{yd} = \frac{120 (1,8/2) 2,5^4}{1920 7 \cdot 10^9 0,015} \cdot 10^8 \left[ 25 - 40 \frac{(1,8/2)^2}{2,5^2} + 16 \frac{(1,8/2)^4}{2,5^4} \right] \Rightarrow J_{yd} = 42 \text{ cm}^4$$

$$J_y = J_{yc} + J_{yd} = 42 + 42 = 84 \text{ cm}^4$$

In this case the combined moment of inertia of sash E50201 + interlock E50501 + ET080204 must be

$$J_y \geq 84 \text{ cm}^4$$

The moment of inertia of the combination is:  $J_y = 85 \text{ cm}^4$

## CALCULATION OF GLASS PANE THICKNESS

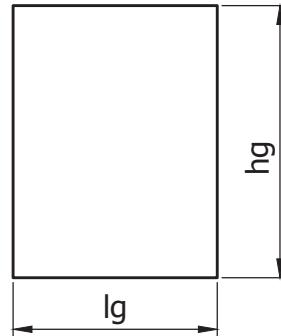

### \* Glazing thickness:

For single glazing the minimum thickness is given by the following equations:

a) If  $\frac{h_g}{l_g} \leq 3$ ,  $t = \sqrt{\frac{10 \cdot l_g \cdot h_g \cdot w}{72}}$ , mm

or

b) If  $\frac{h_g}{l_g} > 3$ ,  $t = \frac{l_g \cdot \sqrt{10 \cdot w}}{4,9}$ , mm

where:

- $t$  - Minimum theoretical glass thickness, mm
- $w$  - Wind pressure,  $\text{kg}/\text{m}^2$
- $l_g$  - The smallest dimension of the glass pane, m
- $h_g$  - The largest dimension of the glass pane, m

For double glazing, the total thickness of both glasses in the panel is equal to the thickness of a single glass pane (evaluated using the above equations) multiplied by 1.5

For triple glazing, the total thickness of all glasses in the panel is equal to the thickness of a single glass pane (evaluated using the above equations) multiplied by 1.7

Always consult façade engineer or glazing manufacturer when calculating for required glazing thickness and maximum allowable dimensions.

Example:

Initial data:

$$l_g = 2,8 \text{ m}$$

$$h_g = 3 \text{ m}$$

$$w = 120 \text{ kg}/\text{m}^2$$

$$\frac{h_g}{l_g} = \frac{3}{2,8} = 1,07 \Rightarrow \frac{h_g}{l_g} \leq 3 \Rightarrow$$

$$t = \sqrt{\frac{10 \times l_g \times h_g \times w}{72}} = \sqrt{\frac{10 \times 2,8 \times 3 \times 120}{72}} \Rightarrow t = 11,8 \text{ mm}$$

For double glazing  $t_{\text{req}} = 1,5 \times 11,8 = 18 \text{ mm}$

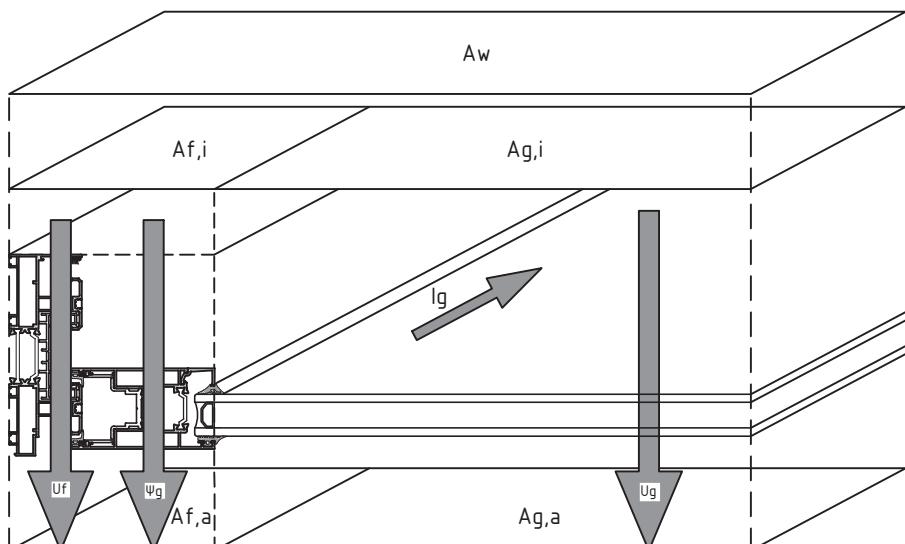

We choose double glazing 10/spacer/4+4

ATTENTION: PLEASE NOTE THAT THE ABOVE CALCULATIONS ARE INDICATIVE

## Method for calculation according to EN ISO 10077-1

$$U_w = \frac{A_g \times U_g + A_f \times U_f + l_g \times \psi_g}{A_g + A_f}$$

- $U_w$  - thermo-transmittance coefficient of the whole structure
- $U_g$  - glass thermo-transmittance coefficient
- $U_f$  - thermo-transmittance coefficient of the aluminium frame (frame and sash)
- $\psi_g$  - spacer linear thermal transmittance
- $l_g$  - total length of the spacer
- $A_g$  - glass area
- $A_f$  - aluminium frame area (frame and sash)
- $U_w$  - is calculated by formula (1)
- $U_g$  - is given by the glass manufacturer
- $U_f$  - is given by the manufacturer of the aluminium profiles

### Example for calculating thermal transmission coefficient

frame: E 50                           $U_f$  2.29       $W/(m^2 K)$

spacer: Warm Edge                   $\psi_g$  0.08       $W/(mK)$

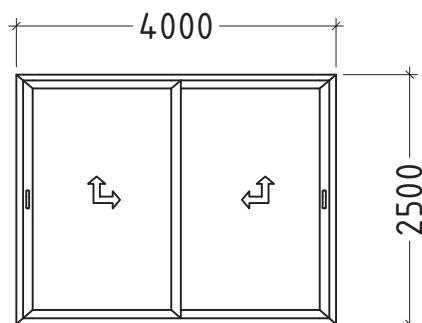

glass: double insulated glass     $U_g$  0.9         $W/(m^2 K)$

window width:                      4.00 m

window height:                      2.50 m

length of glass edge  $l_g$ :        16.0 m

window type:                        double vent sliding

$$U_w = \frac{8.0 \times 0.9 + 1.84 \times 3.34 + 16.2 \times 0.08}{8.1 + 2}$$

$$U_w \approx 1.45 \text{ } W/(m^2 K)$$

# MACHINING

## MACHINING ON INTERLOCK PROFILES E50501

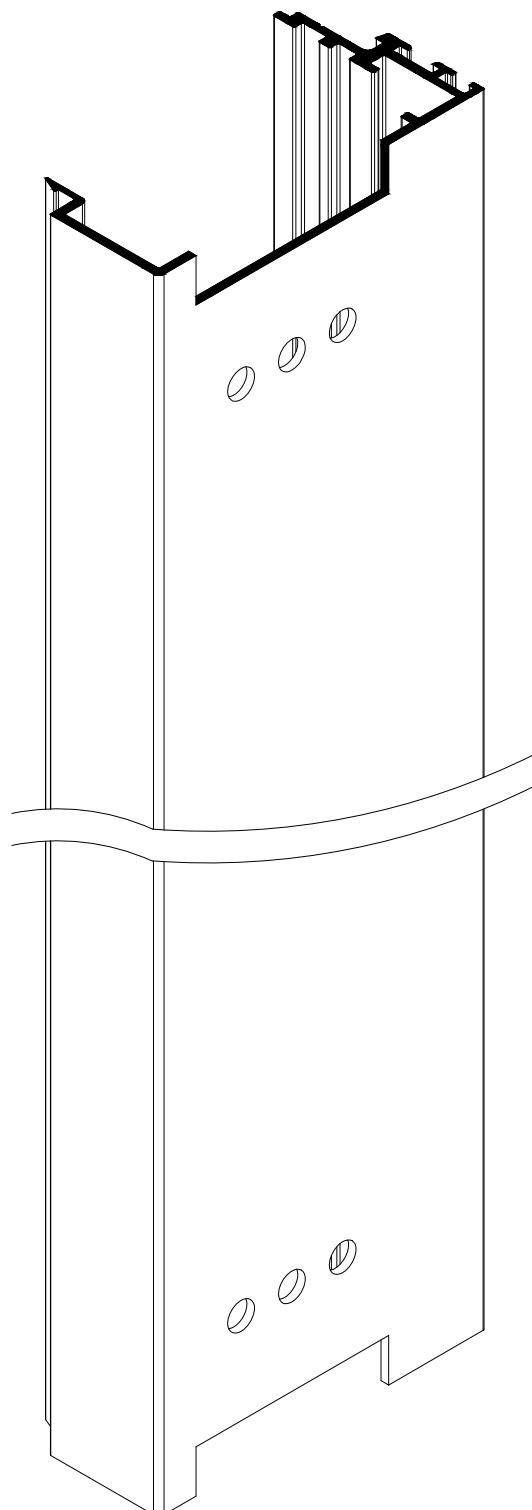

M50-01

E50501

Note:

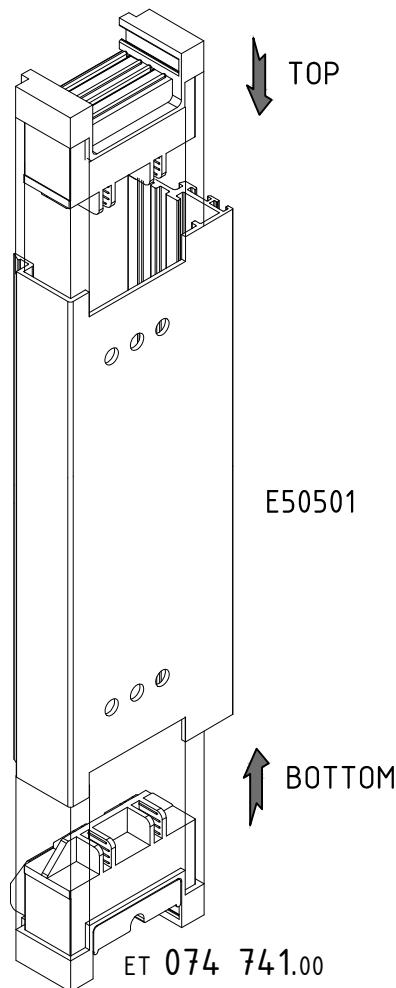

The machining is done on E50 punching machine

## FIXING ACCESSORIES ON INTERLOCK PROFILE E50501

M50-02

ET 074742.00

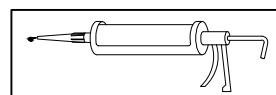

E50501

BOTTOM

PLUG ET.074741.00 IS FIXED ONTO THE BOTTOM SIDE OF INTERLOCK PROFILE E-50501, WHILST PLUG ET.074742.00 IS FIXED ONTO THE TOP SIDE

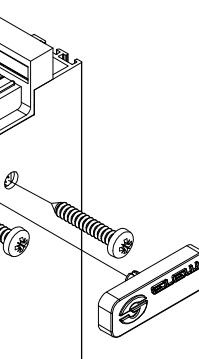

**ATTENTION:** FOR SLIDING, WITHOUT LIFT, ONLY PLUG ET.074742.00 IS USED (TOP & BOTTOM SIDE).

ET138001.00

FIX ON BOTH SIDES OF PLASTIC SPACER ET.080204.00 PLASTIC PLUG ET.074750.00. ALWAYS APPLY SILICON IN ADVANCE AT THE SURFACE WHERE THE PLUG IS TO BE FIXED

ET 074 750.00

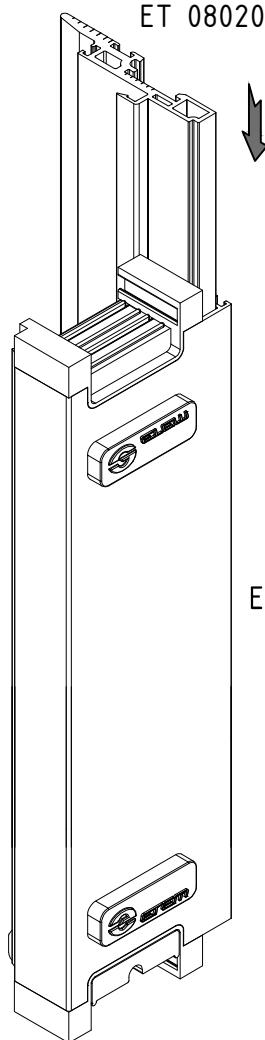

E50501

ET 074743.00

BOTH PLUGS ARE FIXED ONTO THE INTERLOCK PROFILE USING SHEET METAL SCREWS 4.2x25mm DIN 7981. COVER THE HEADS OF THE SCREWS BY FIXING PLUG ET.074743.00

ET 080204.00

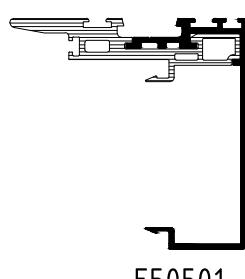

E50501

INSERT PLASTIC SPACER ET.080204.00 INTO THE INTERLOCK PROFILE E-50501, AS PRESENTED IN THE DRAWING

ET 080204.00

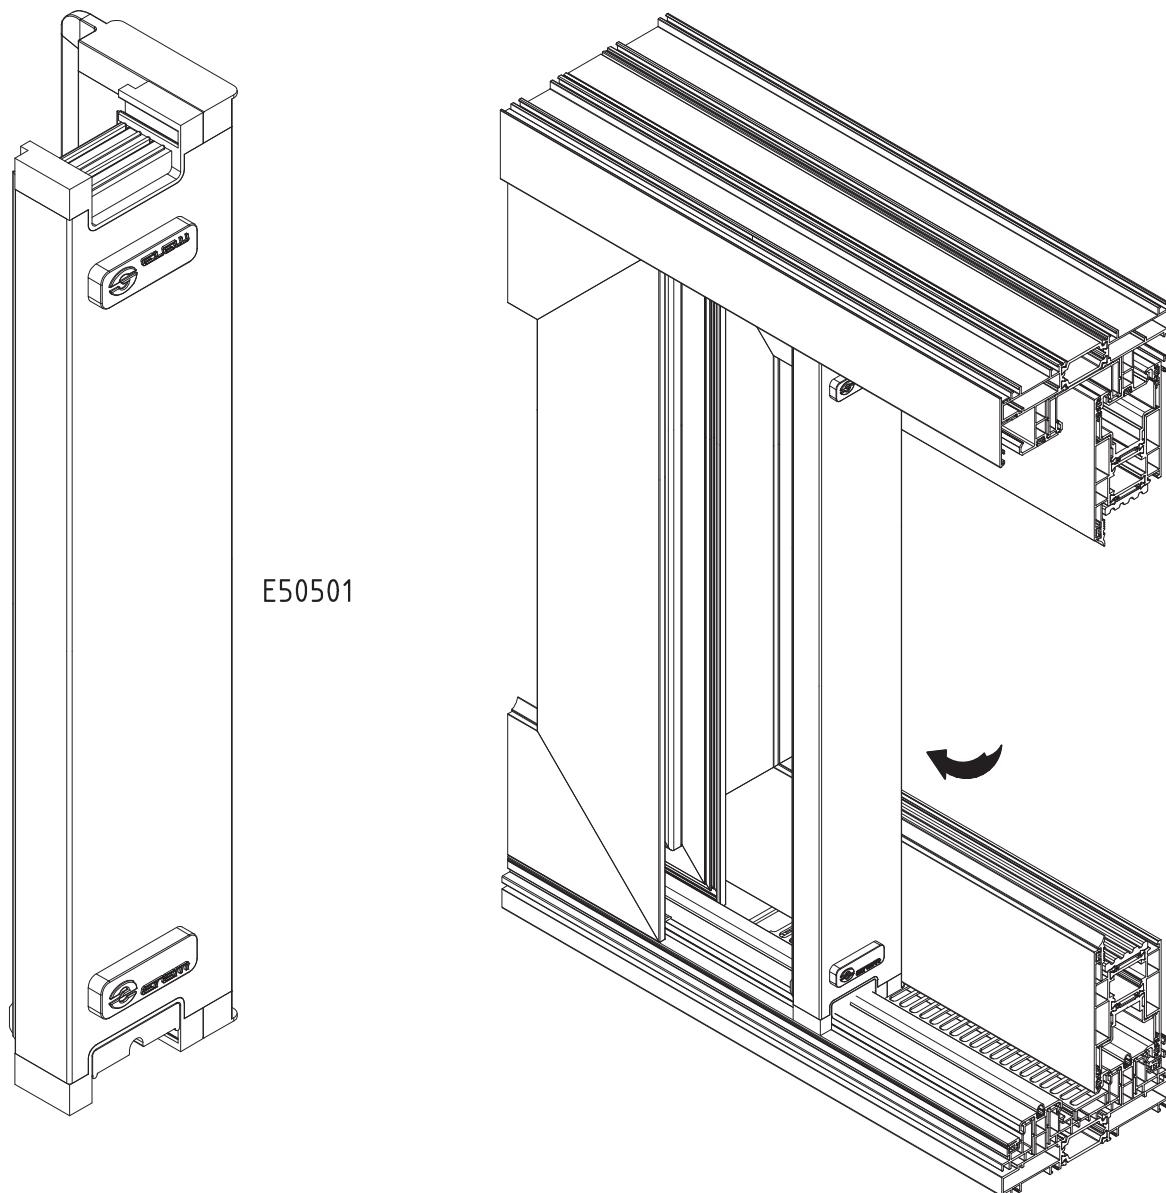

E50501

E50501

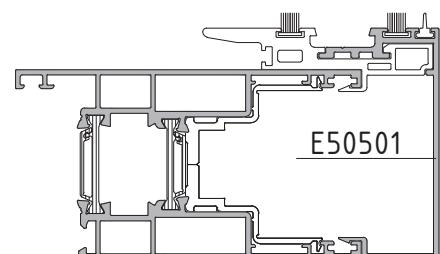

## FIXING INTERLOCK PROFILE E50501 ONTO THE SASH FRAME

M50-03

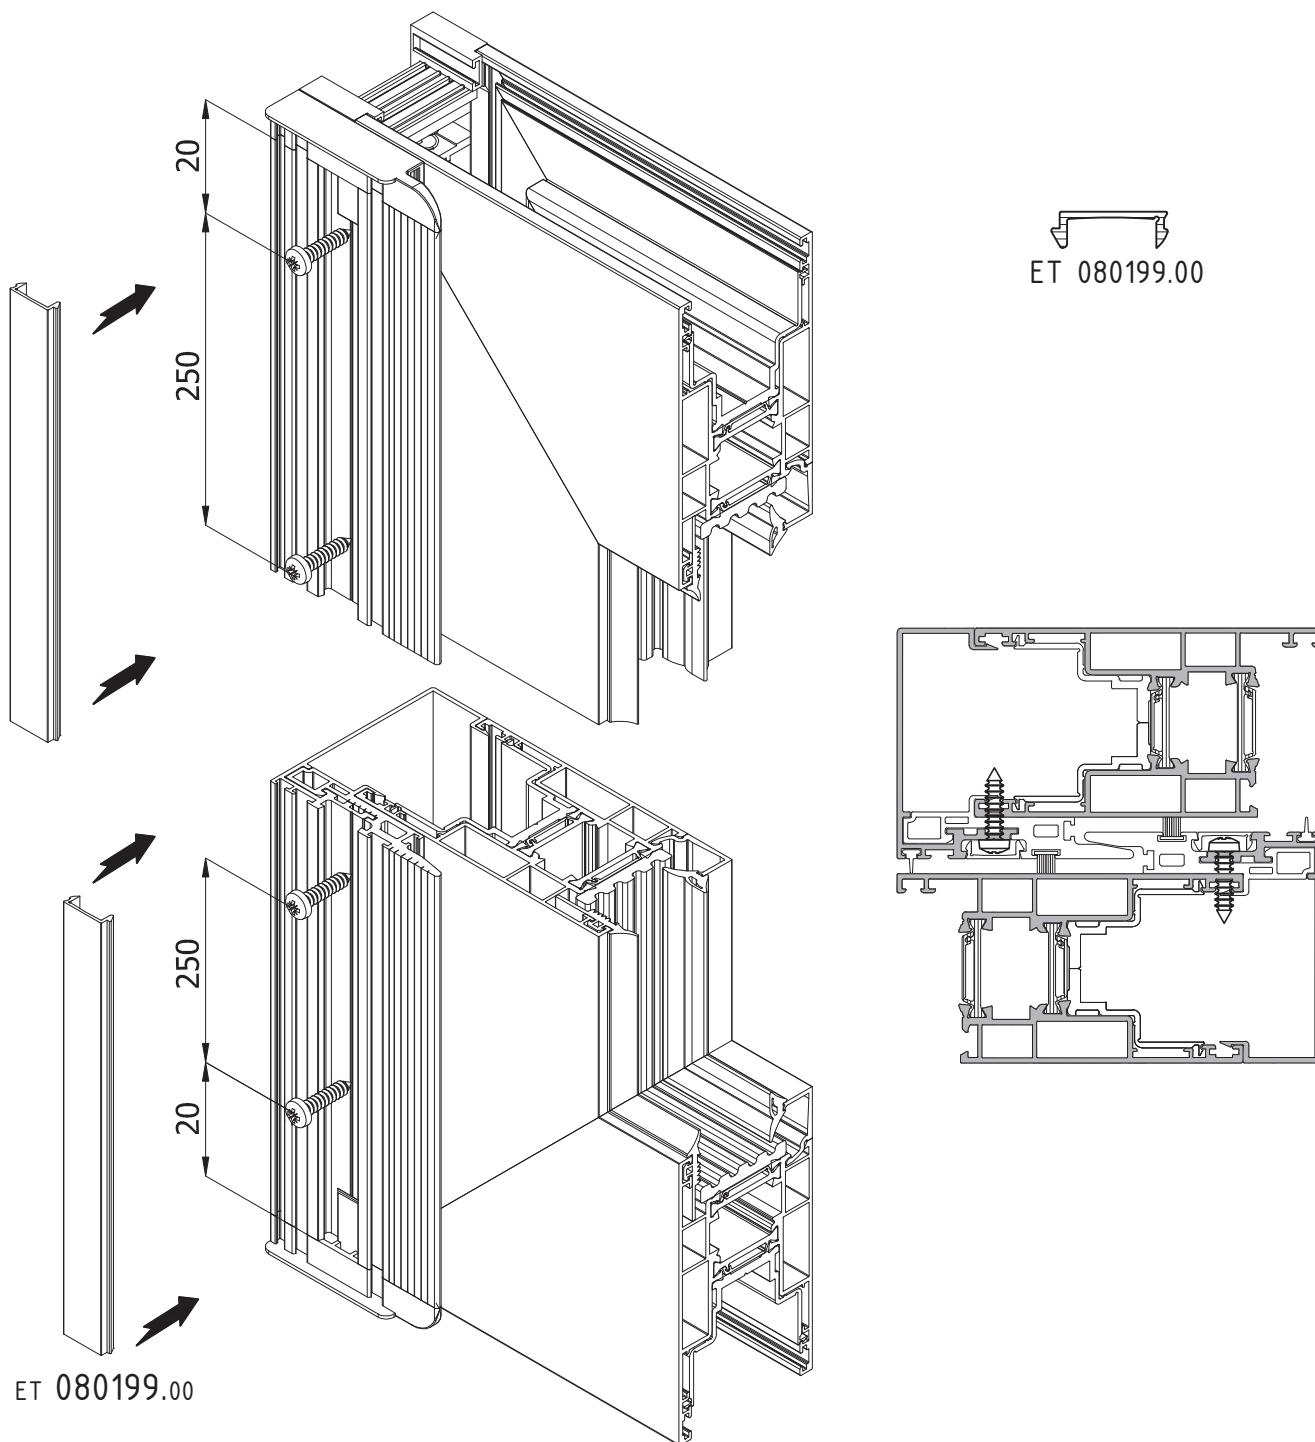

FIRST PLACE THE SASH FRAME ONTO THE RAIL AND THEN FIX THE INTERLOCK, AS PRESENTED IN THE DRAWINGS. ALWAYS CHECK THAT GASKET AND PILE WEATHERSEALS ARE FIXED AT THE INTERLOCK, PRIOR FIXING IT ONTO THE SASH FRAME

ATTENTION: THE INTERLOCK CAN BE FIXED ONTO THE SASH FRAME ONLY ONCE THE SASH FRAME IS PLACED ONTO THE RAIL PLASTIC SPACER

## FASTENING INTERLOCK PROFILE E50501 ONTO THE SASH FRAME

M50-04

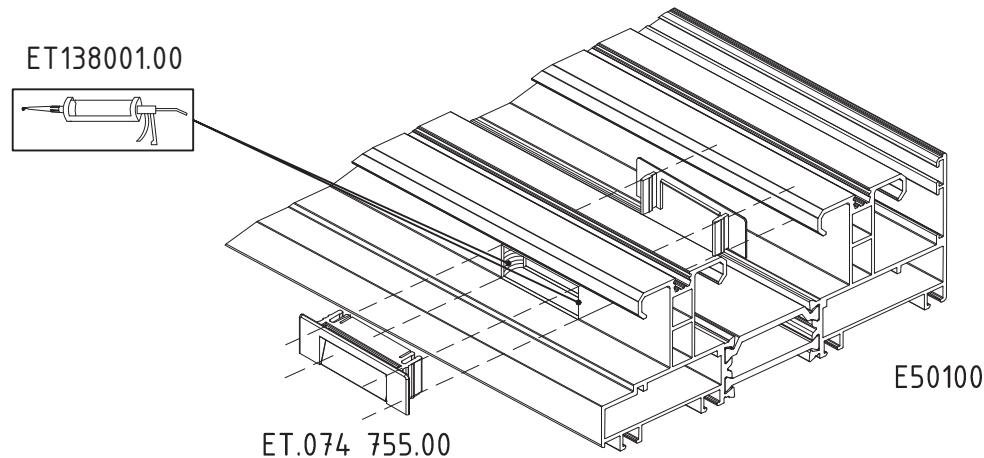

INTERLOCK IS FIXED ONTO THE SASH FRAME USING SHEET METAL SCREWS 4.2x19mm DIN 7981. THE FIRST SCREW IS FIXED AT A DISTANCE OF 20mm, MEASURED FOR THE ENDS OF PROFILE E50501, AND THE CENTER TO CENTER DISTANCE BETWEEN THE NEXT SCREWS MUST BE APPROXIMATELY 250mm. THE HEADS OF THE SCREWS ARE COVERED BY PLASTIC PROFILE ET.080199.00

ATTENTION: REMOVE THE HANDLES (IN CASE ARE FIXED ONTO THE SASH FRAME), SO THAT TO BE ABLE TO FIX THE INTERLOCK

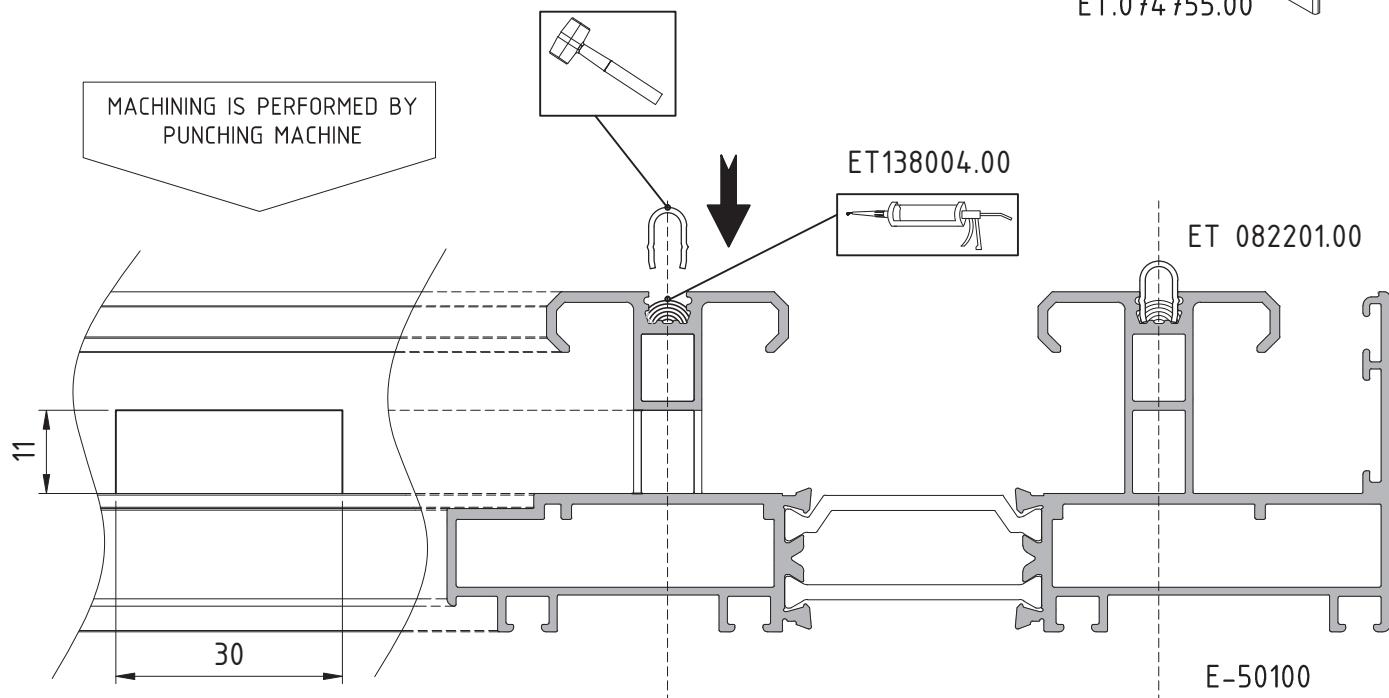

## MACHINING ON RAIL FOR DRAIN HOLES

M50-05

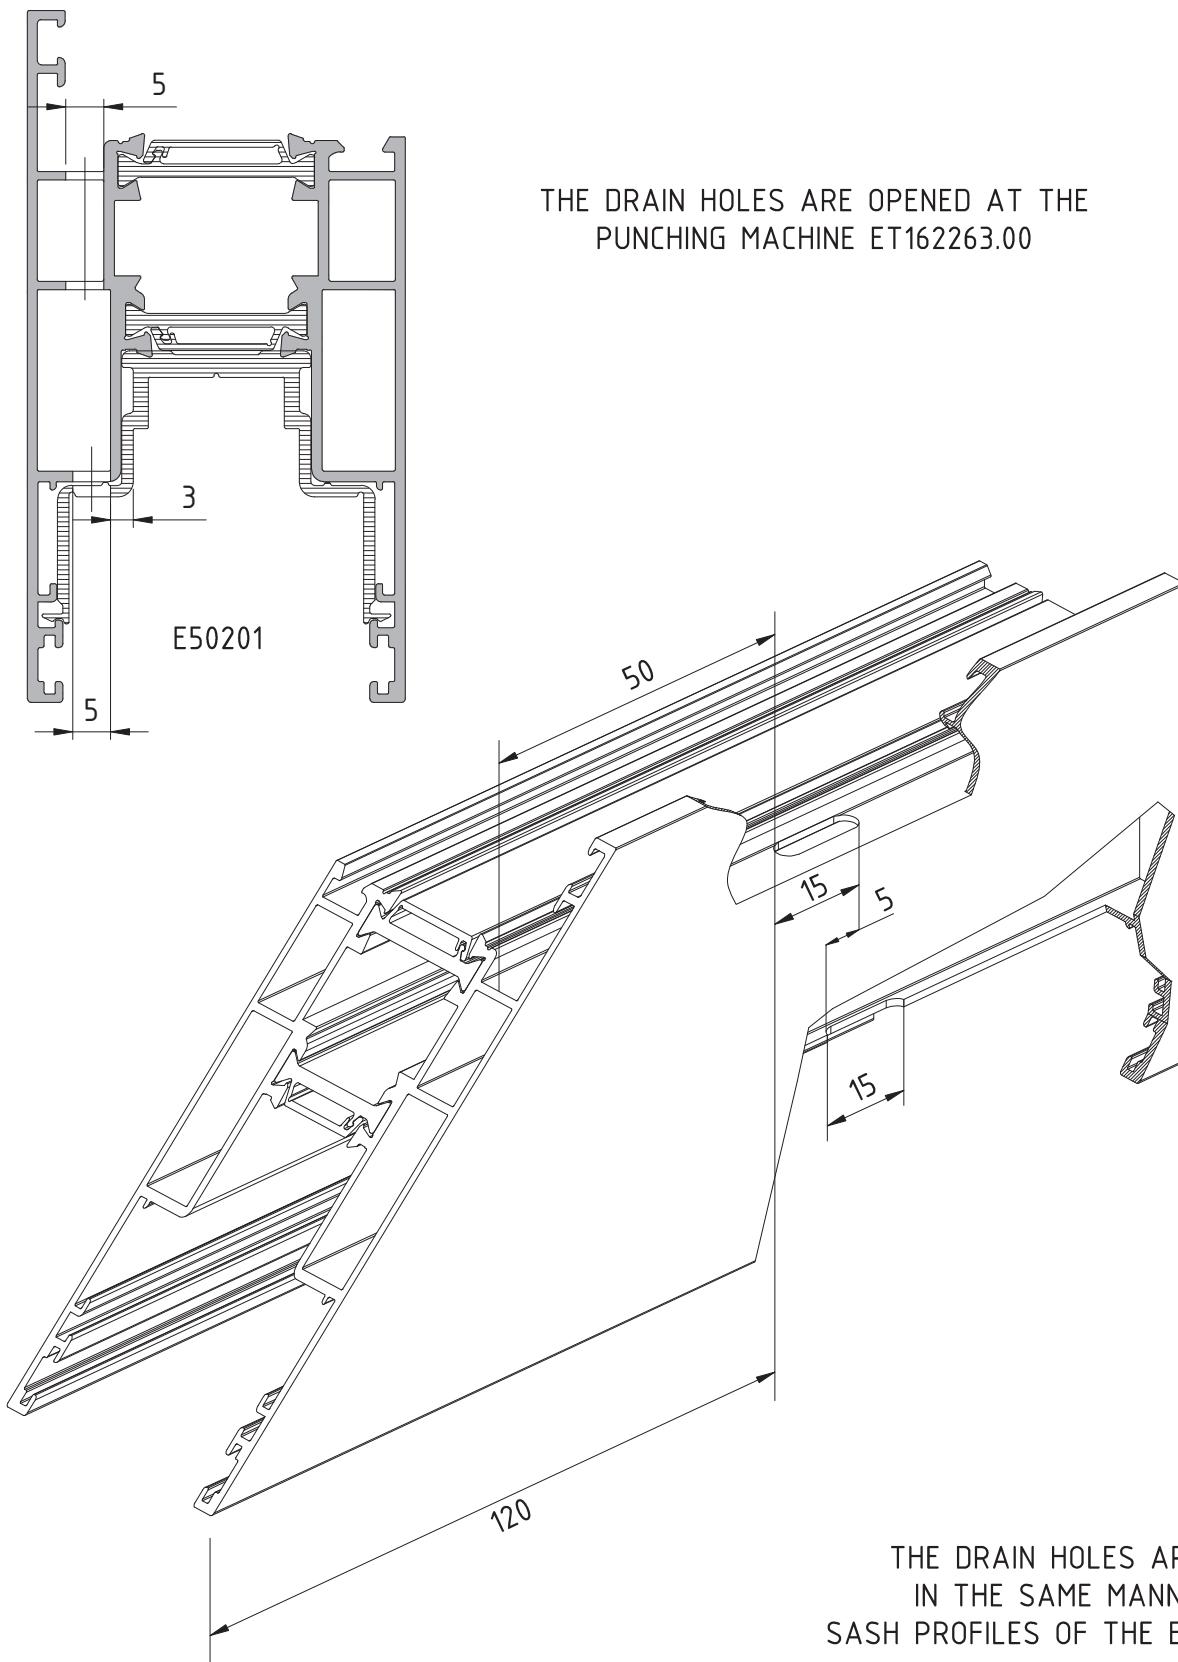

ALWAYS APPLY ADHESIVE ET.138004.00 INTO THE TRACK OF THE RAIL WHERE THE STAINLESS STEEL RAIL ET.082201.00 IS TO BE FIXED

THE DRAIN HOLE ON THE RAIL IS PUNCHED USING THE PUNCHING MACHINE OF THE SYSTEM. APPLY SILICONE ET.138001.00 AT BOTH SIDES OF THE DRAIN HOLE AND THEN FIX DRAIN CAP ET.074 755.00 INTO THE DRAIN HOLE, AS PRESENTED IN THE DRAWING. FITTING INSTRUCTIONS OF PLASTIC PLUG ET.074 755.00 ARE PRESENTED IN PAGE M50-31

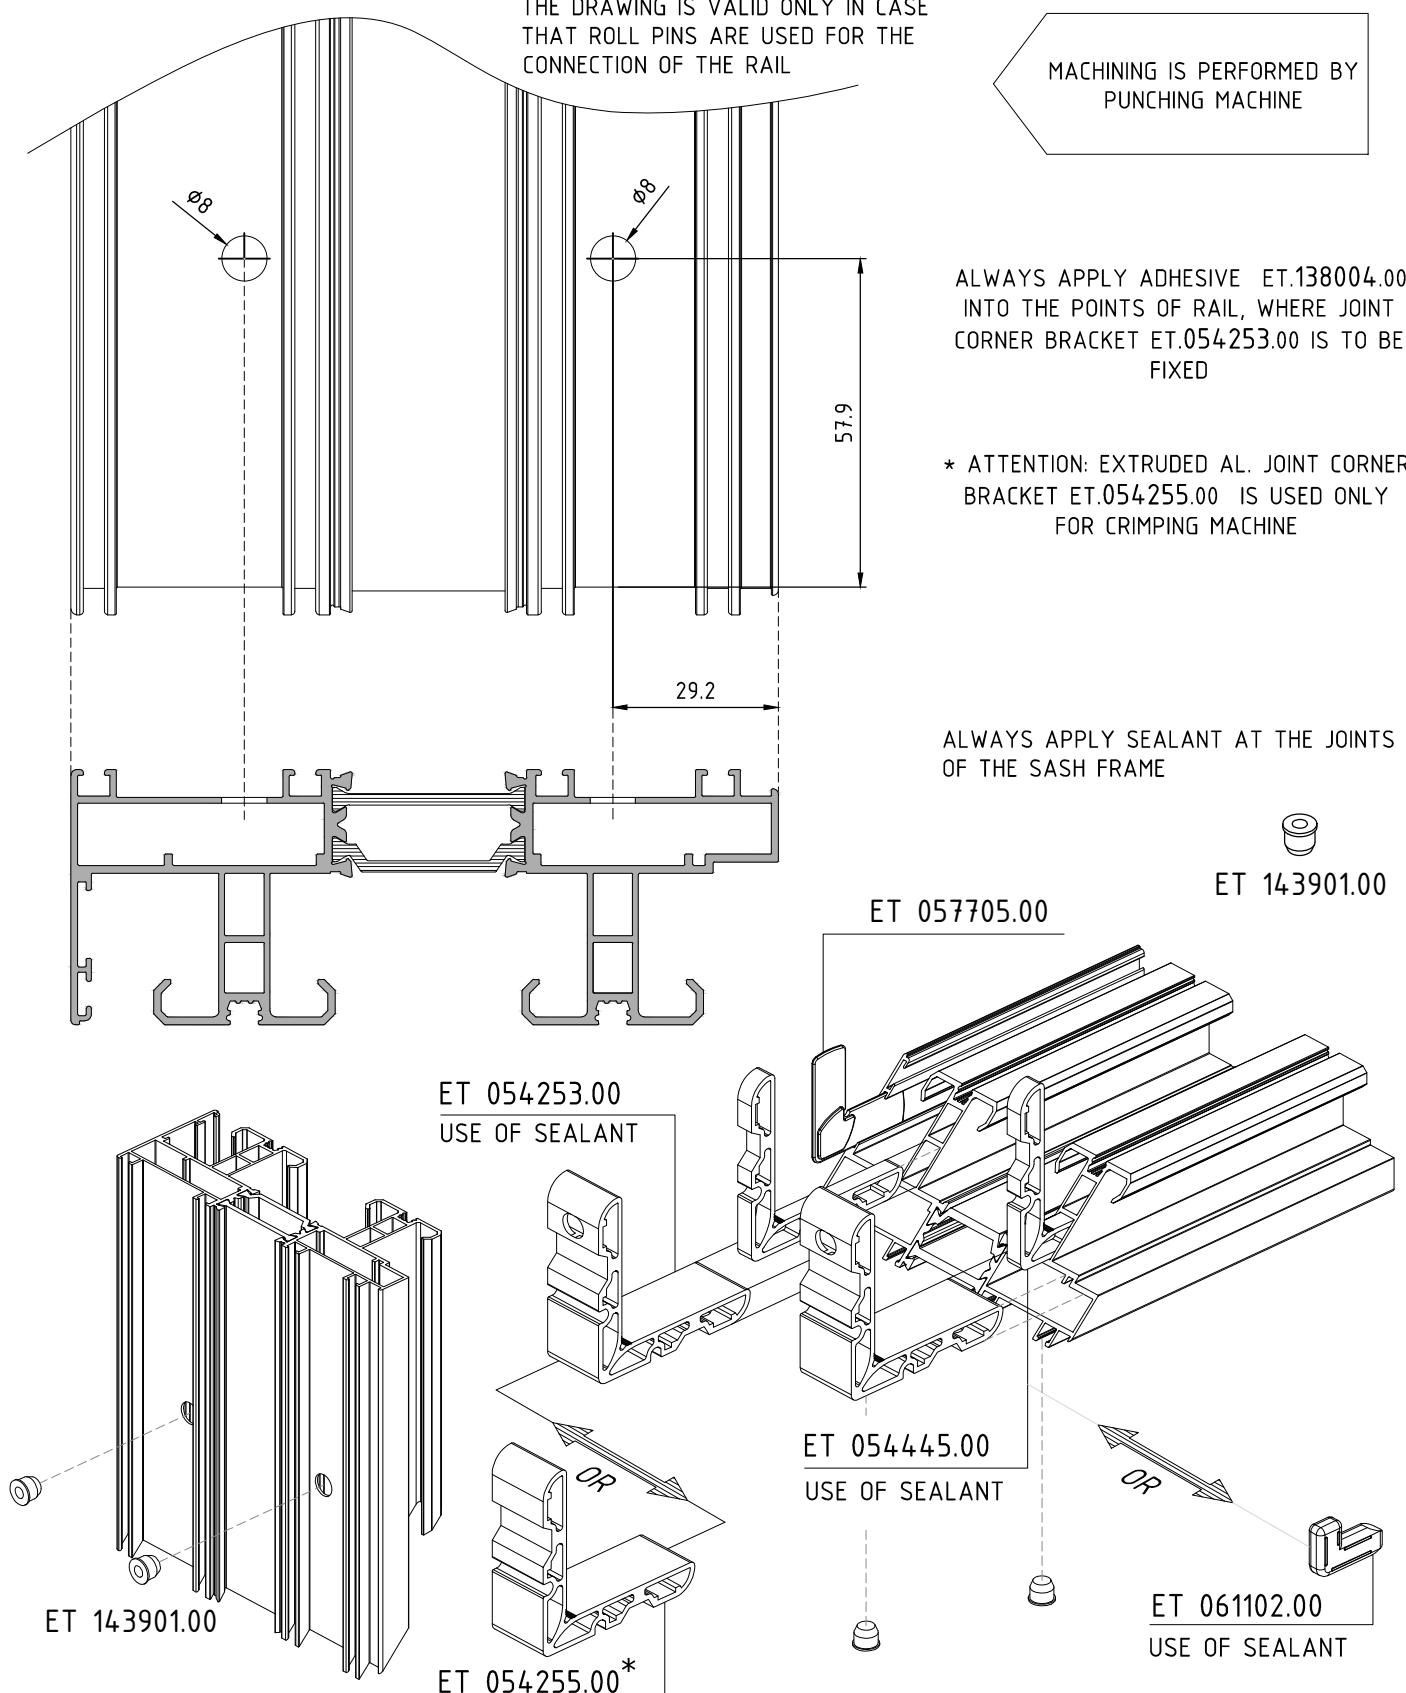

MACHINING ON SASH FOR DRAIN HOLES

M50-06

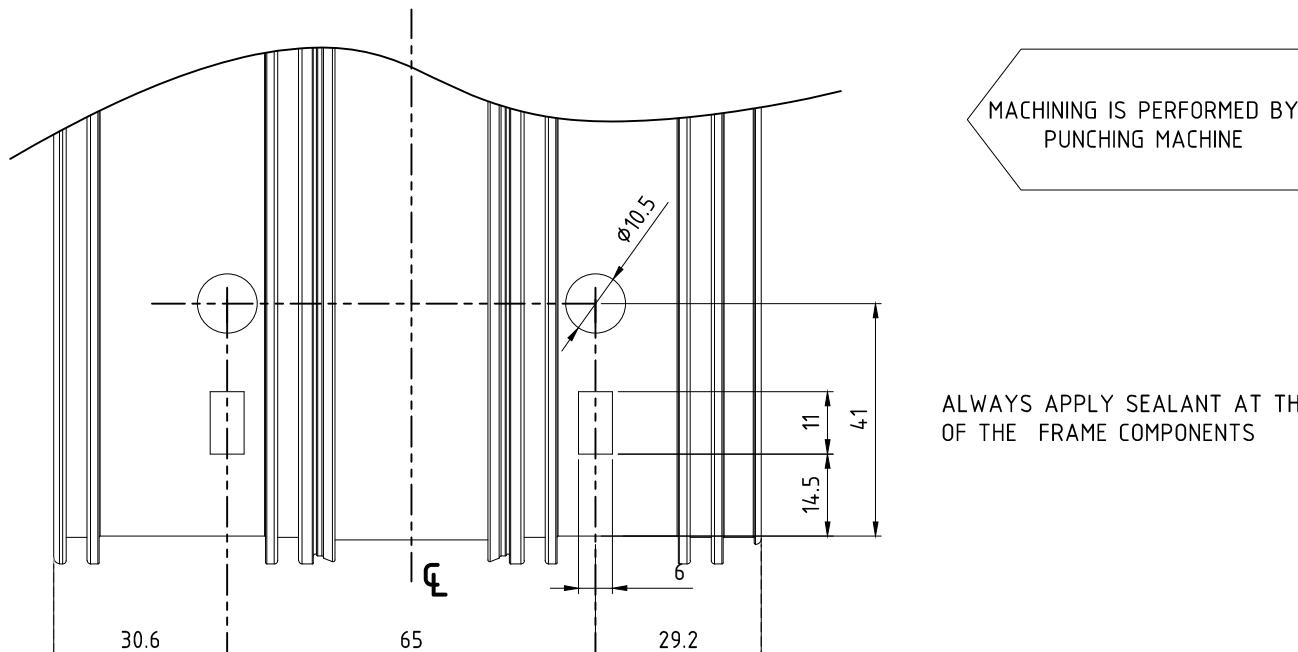

## MACHINING ON RAIL FOR FIXING EXTRUDED AL. JOINT CORNER BRACKETS

M50-07

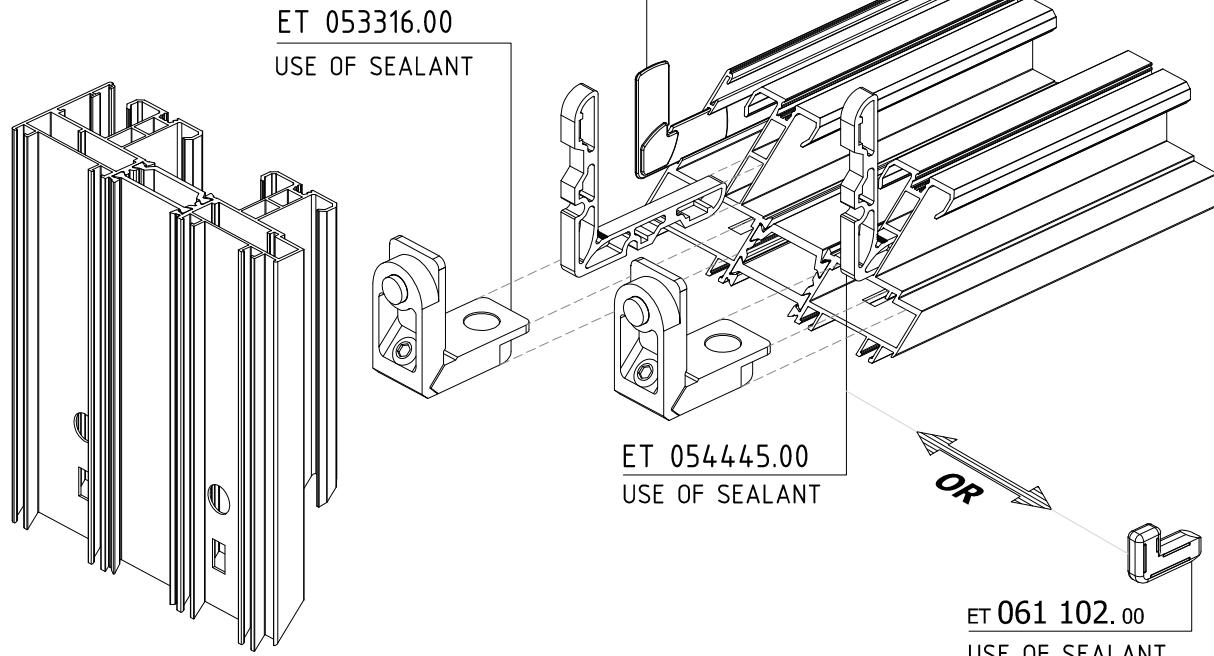

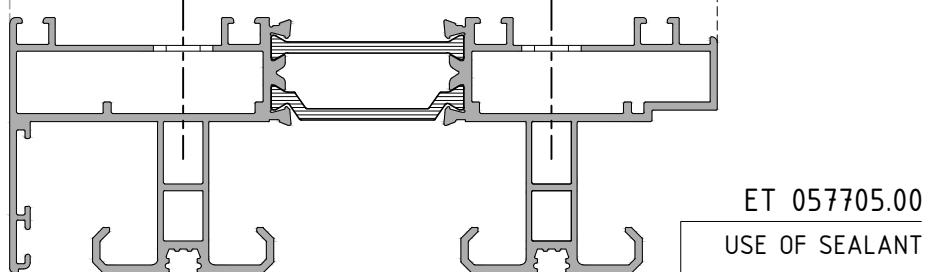

MACHINING ON RAIL FOR FIXING WITH DIE CAST JOINT CORNER BRACKETS

M50-08

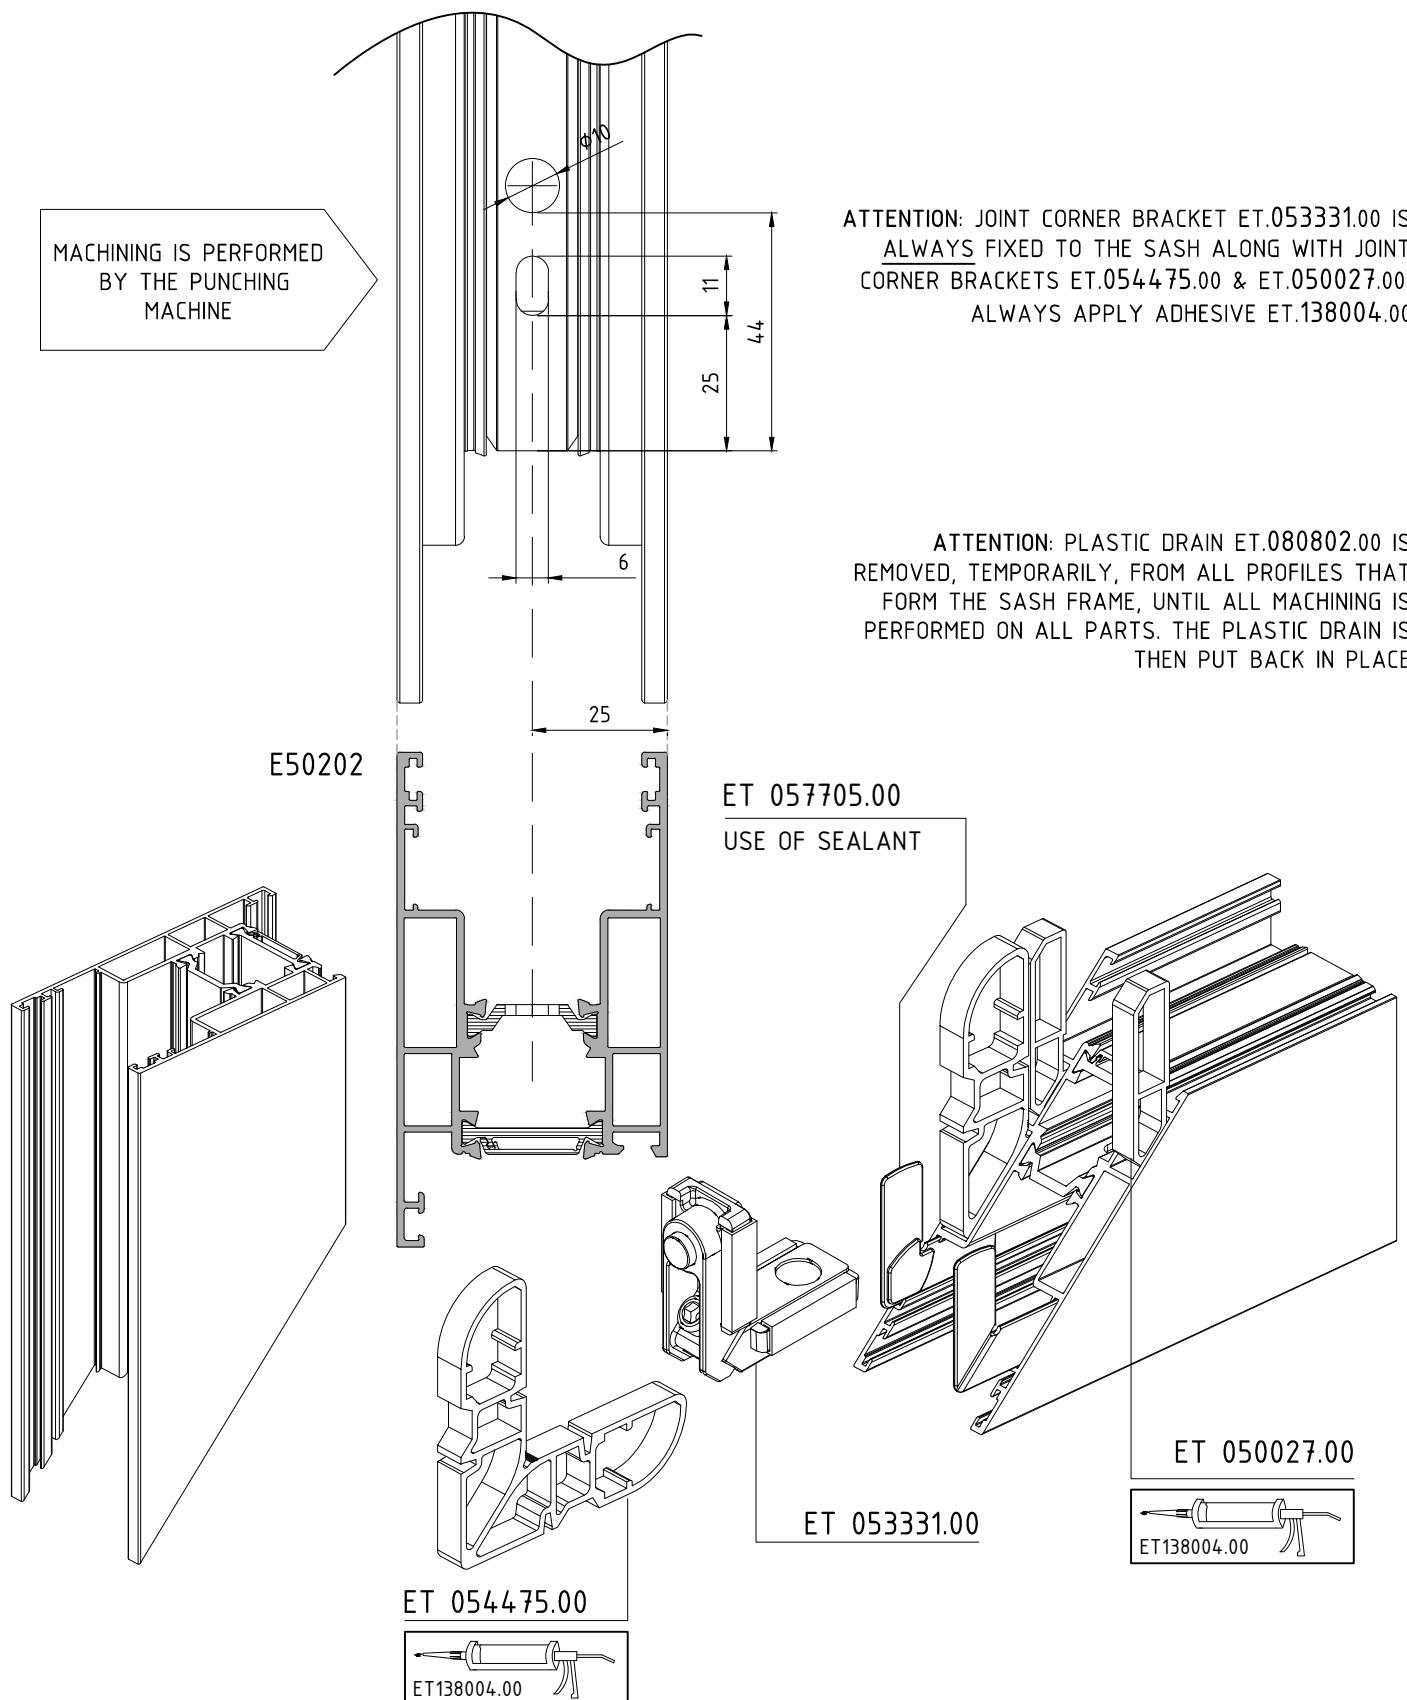

ALWAYS APPLY SEALANT AT THE JOINTS OF THE FRAME COMPONENTS

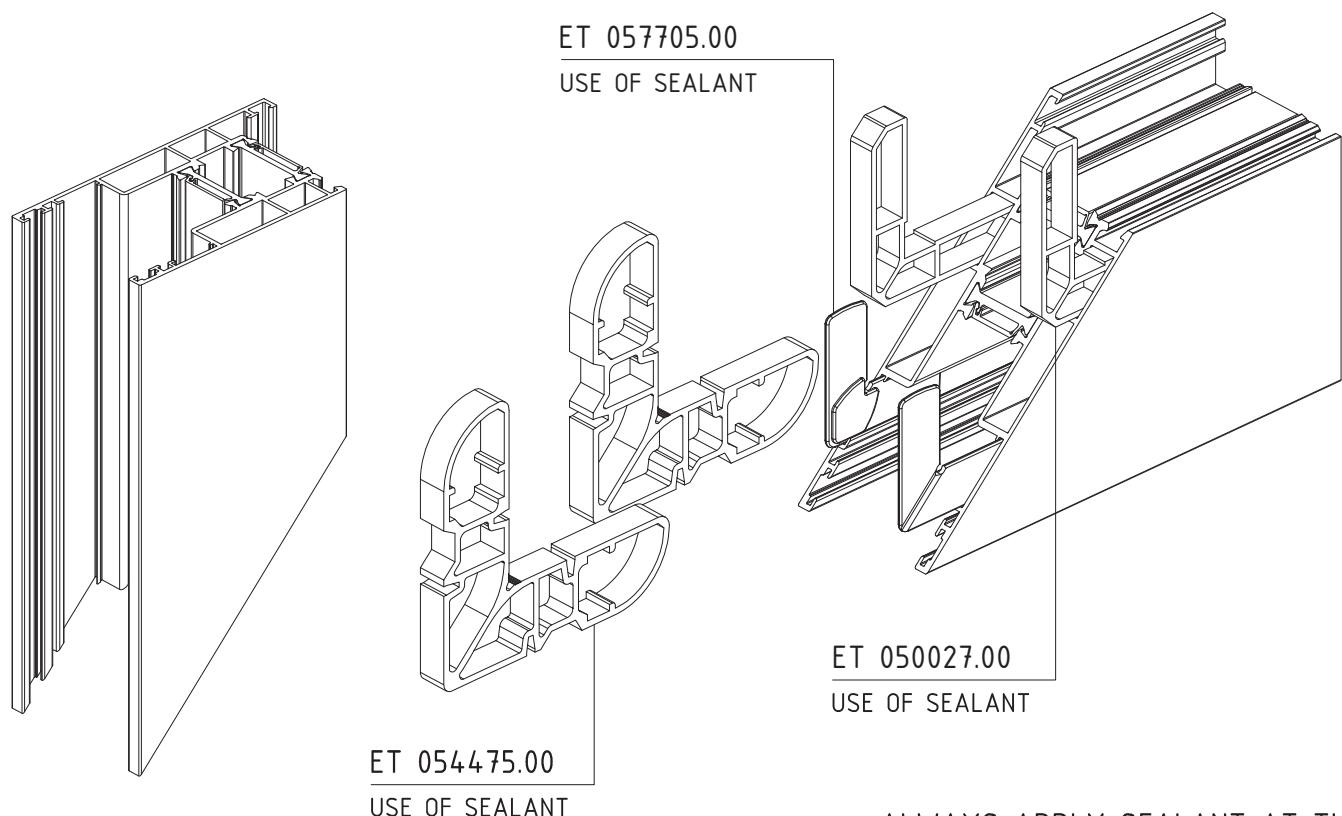

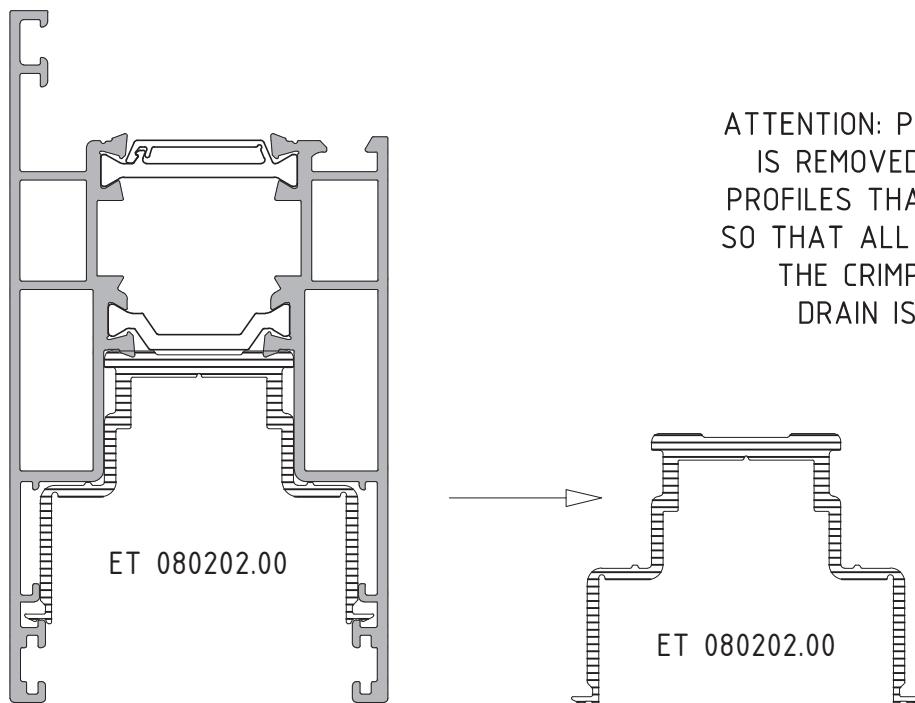

MACHINING ON E50202 FOR FIXING WITH DIE CAST JOINT CORNER BRACKET

M50-09

FIXING SASH FRAME E50202 WITH EXTRUDED AL. JOINT CORNER BRACKETS

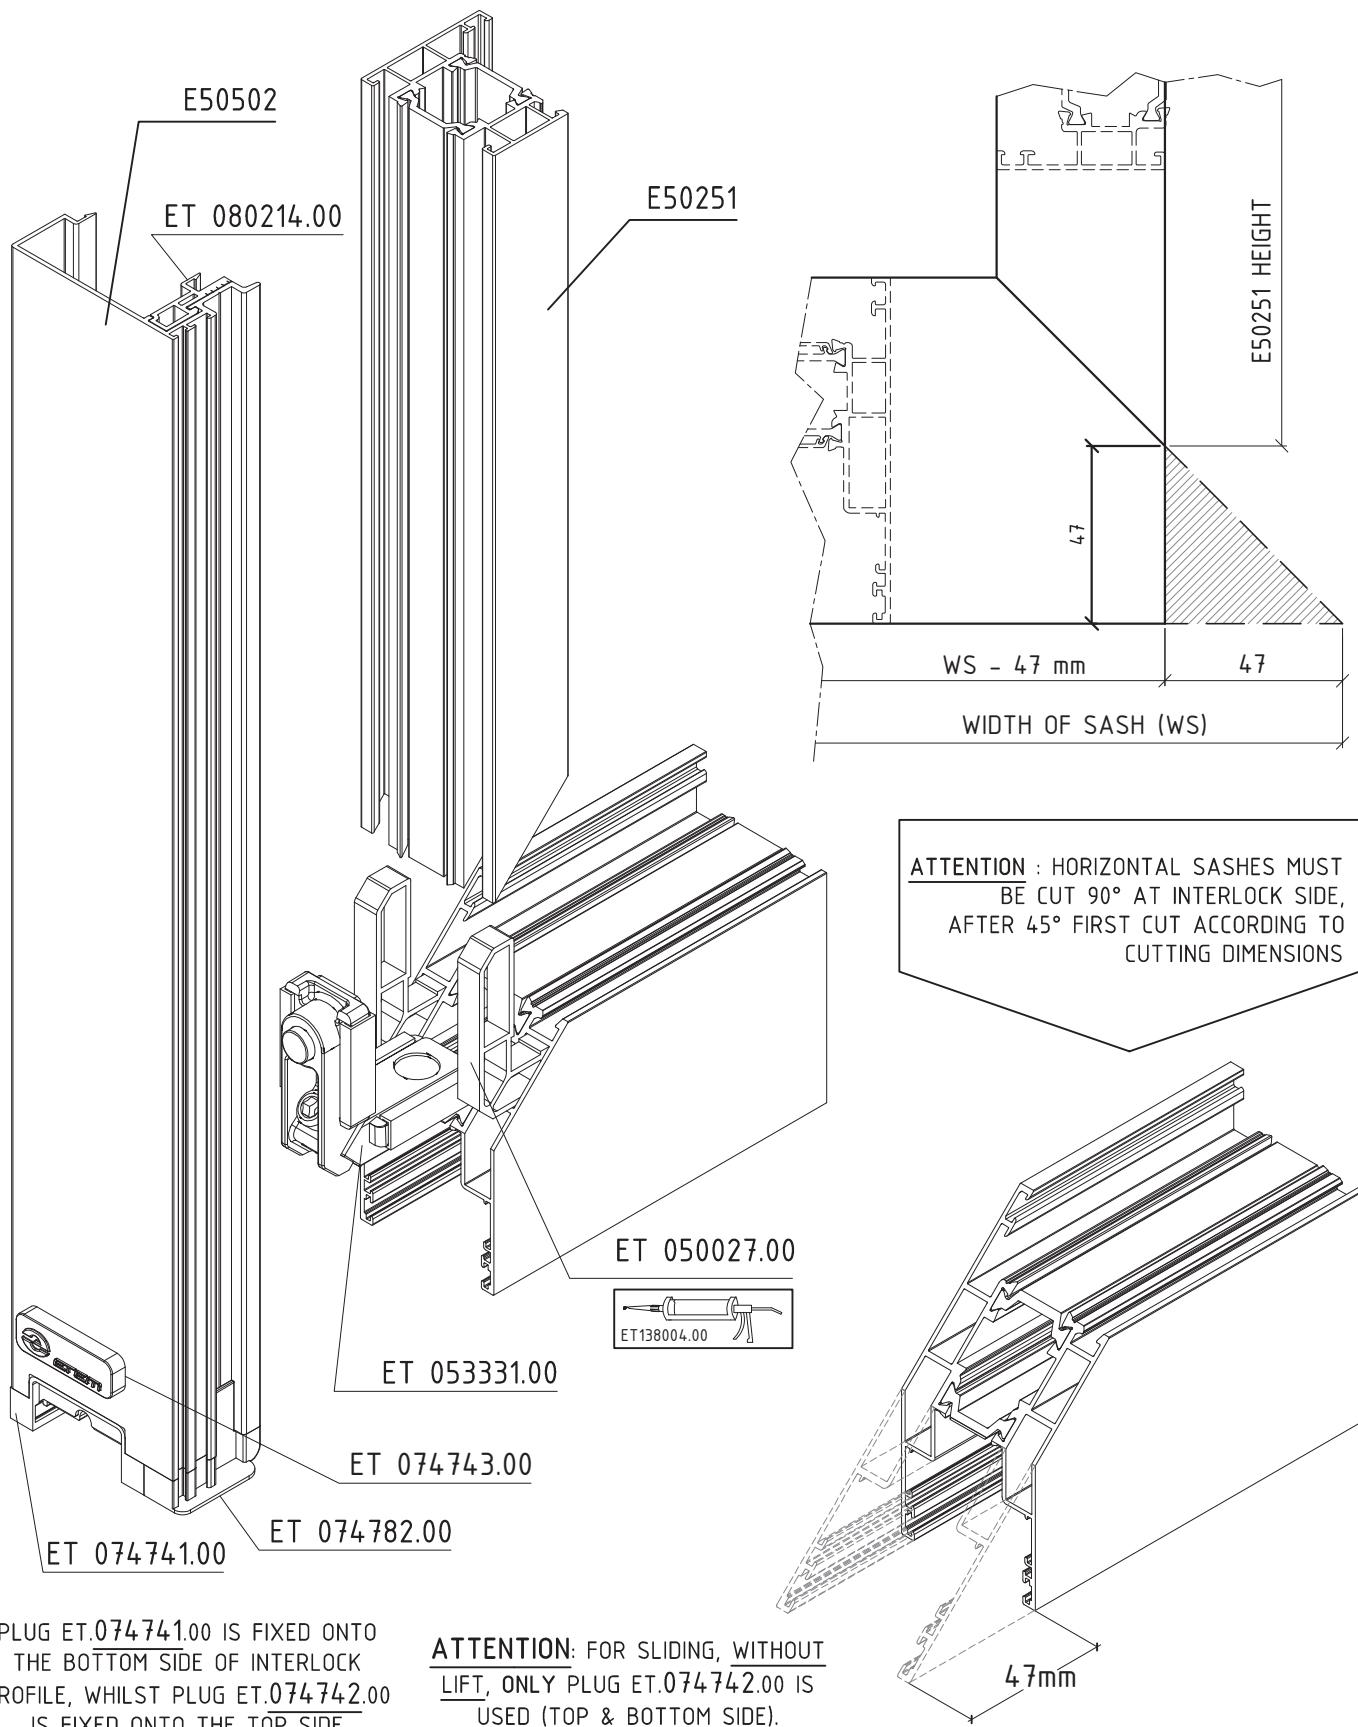

M50-10

ALWAYS APPLY SEALANT AT THE JOINTS OF THE SASH FRAME

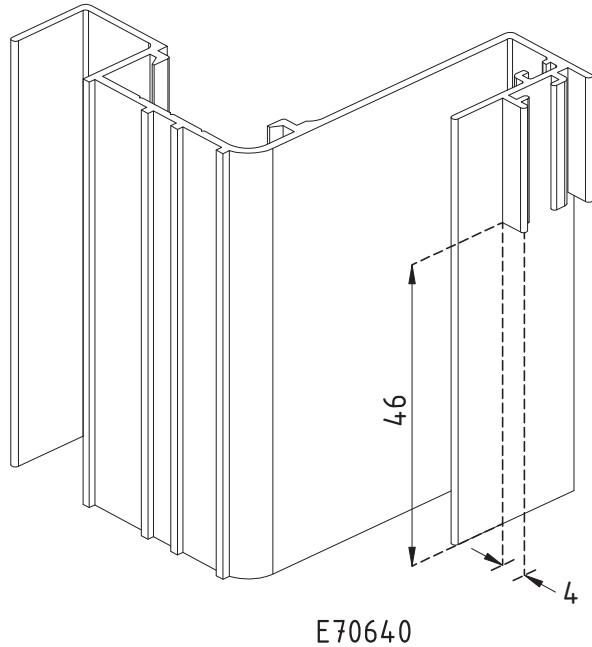

MACHINING ON HORIZONTAL SASHES TO CONNECT WITH E50251

M50-10\_1

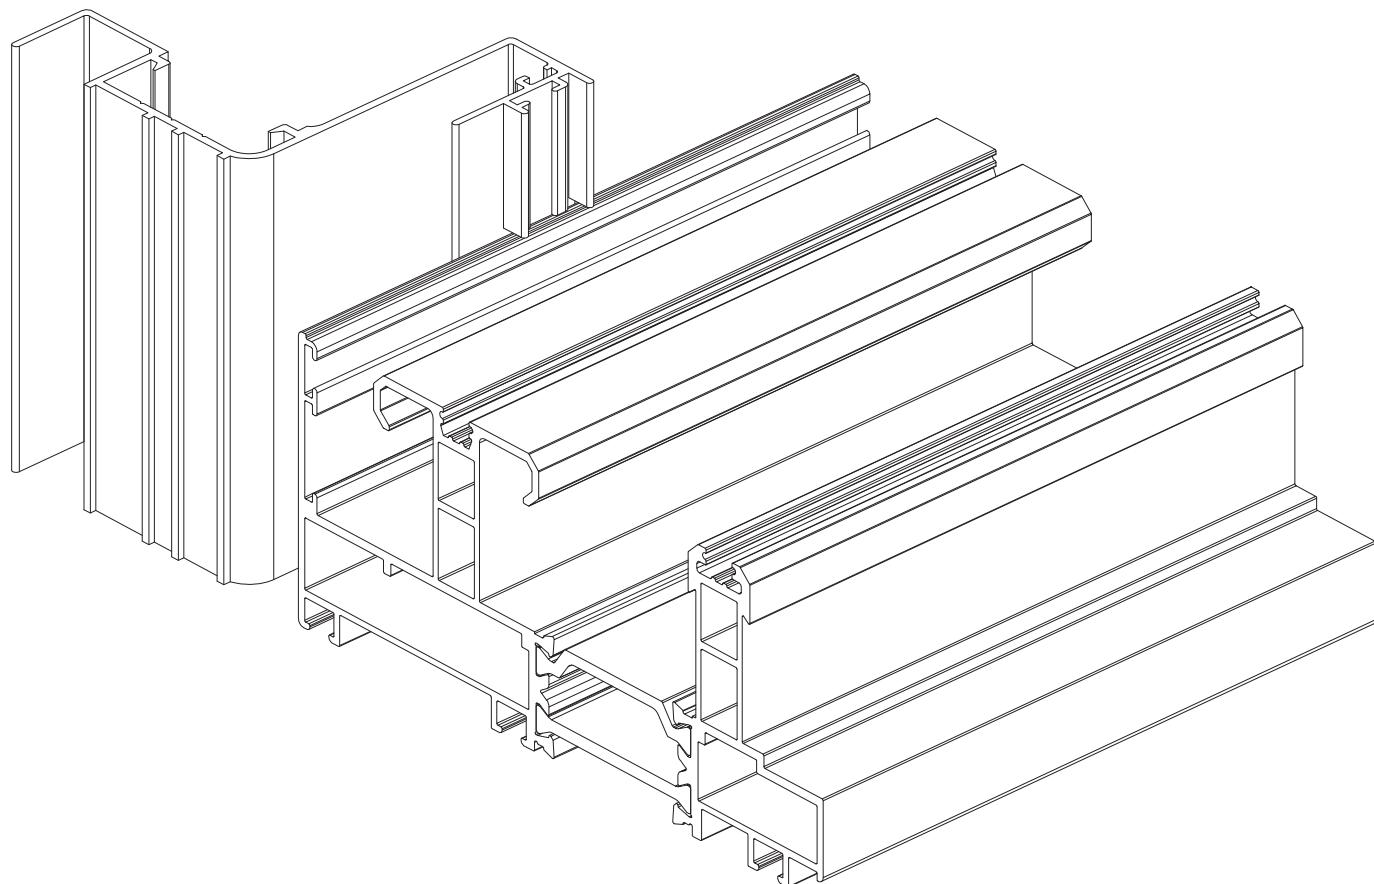

MACHINING ON SEALING PROFILES FOR POCKET SLIDING DOOR / WINDOW

M50-11

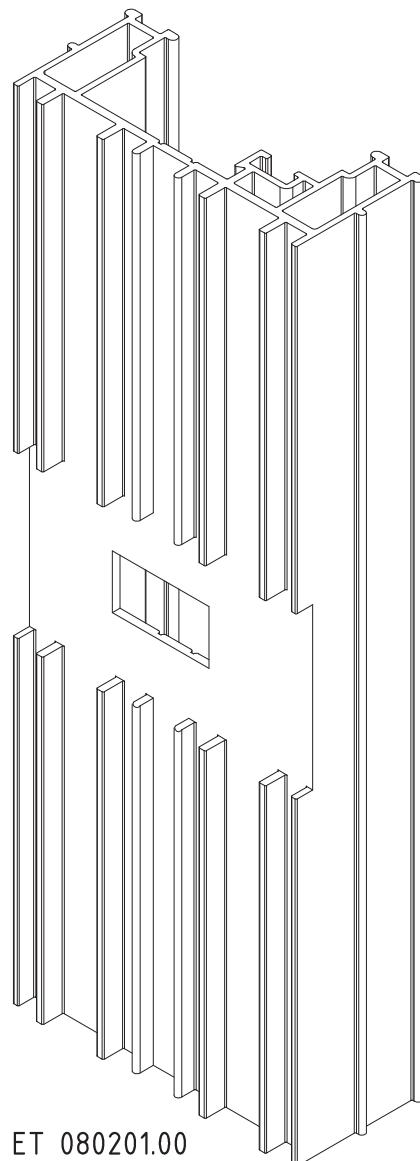

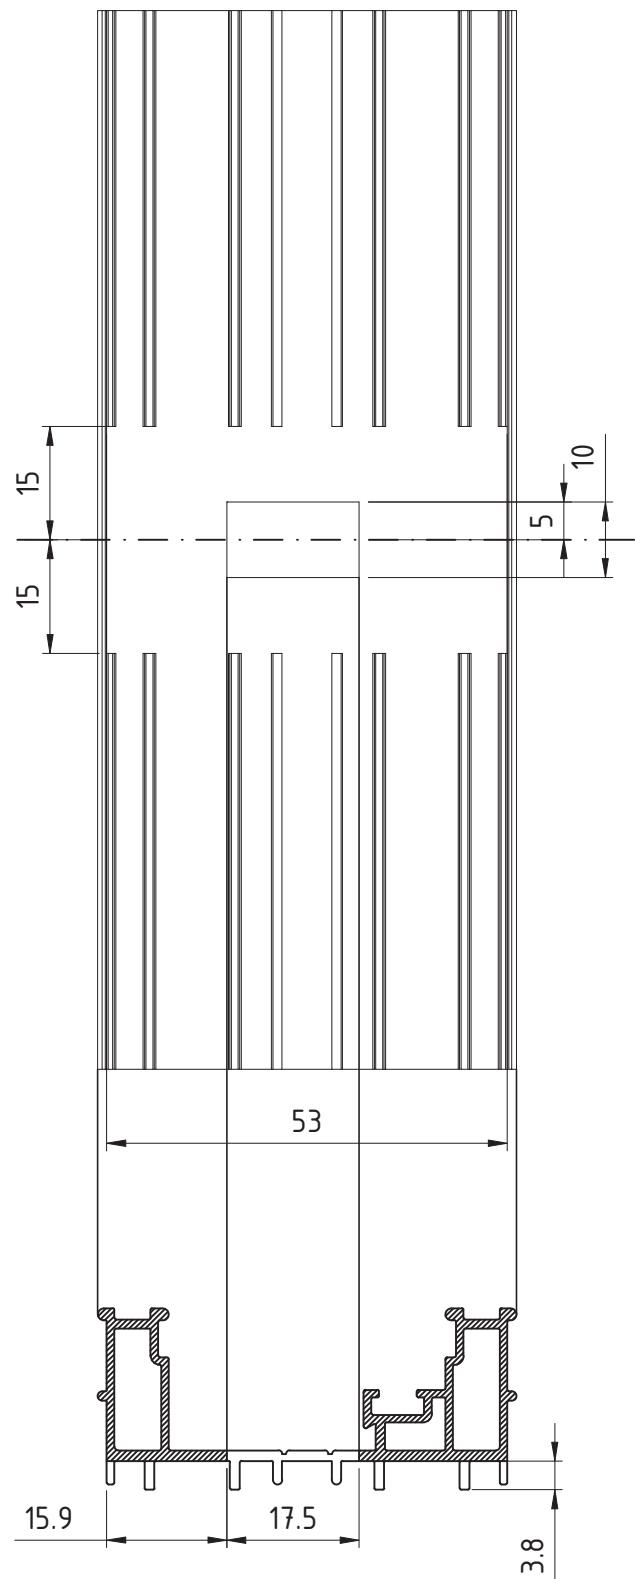

SEALING PROFILES E19640 & E70640  
ARE MACHINED AS PRESENTED IN THE  
DRAWING

MACHINING ON PLASTIC PROFILE ET-080201.00

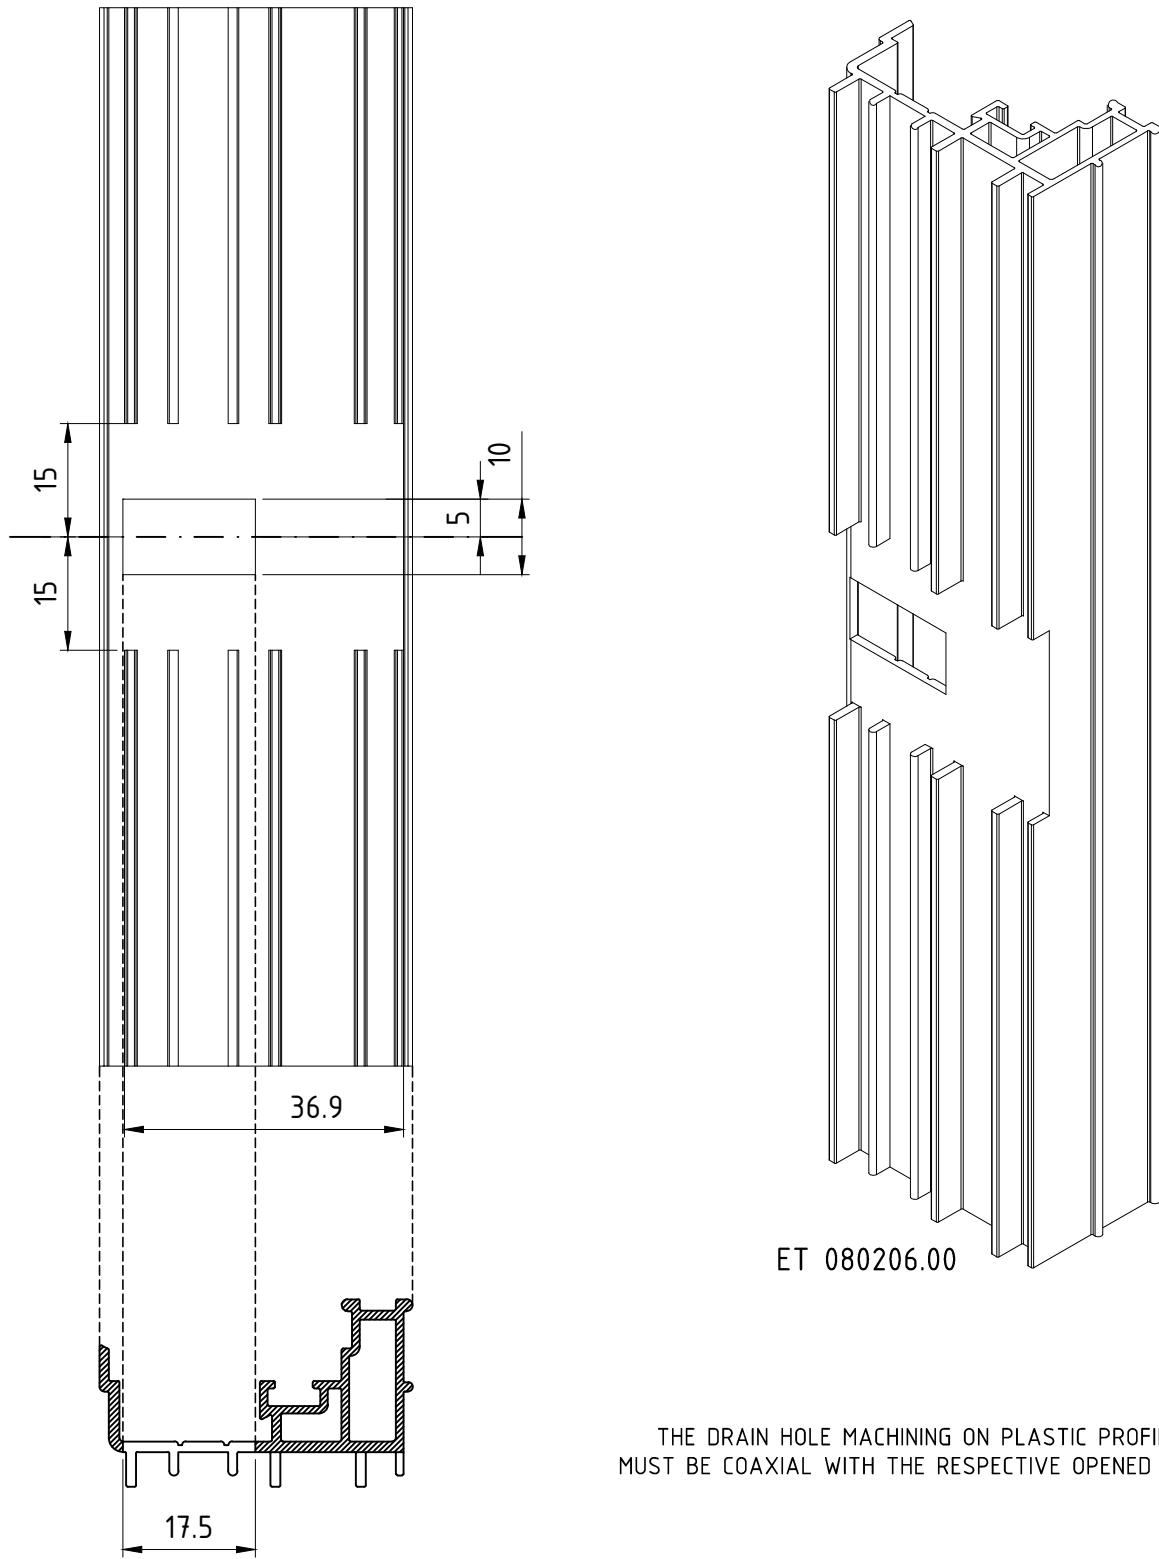

M50-12

THE DRAIN HOLE MACHINING ON PLASTIC PROFILE  
ET.080201.00 MUST BE COAXIAL WITH THE  
RESPECTIVE OPENED ONTO THE RAIL

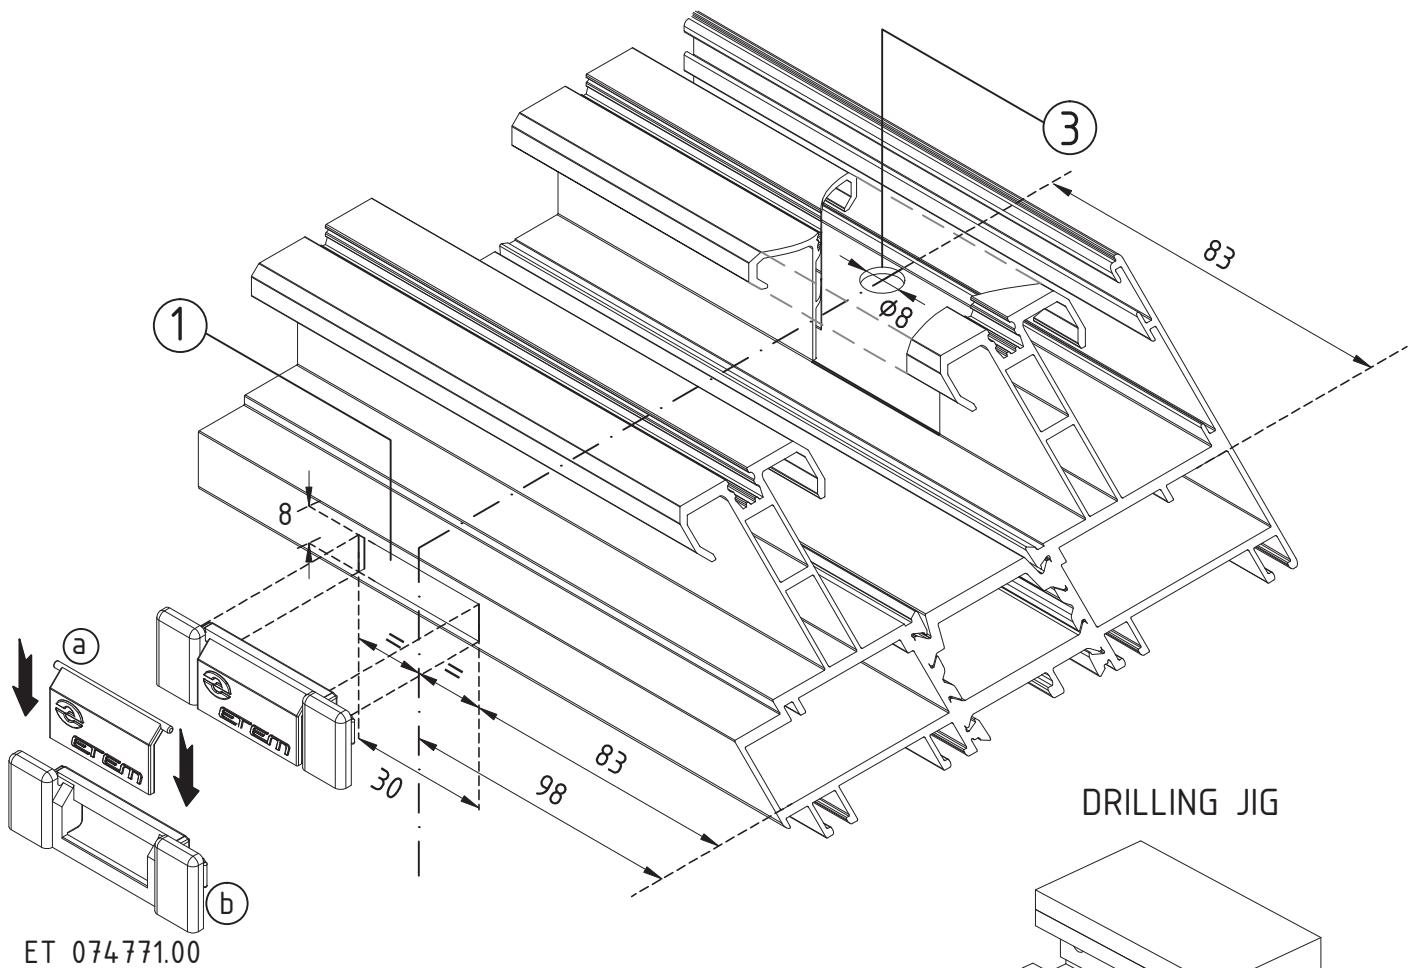

MACHINING ON PLASTIC PROFILE ET 080206.00

M50-13

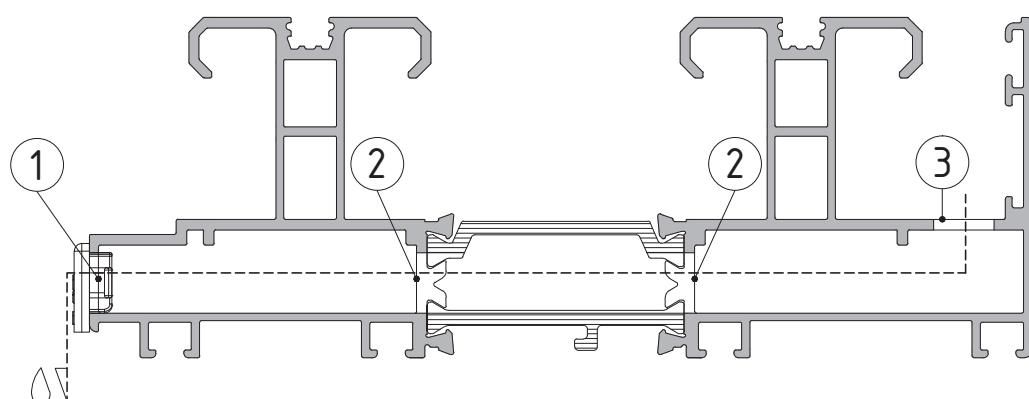

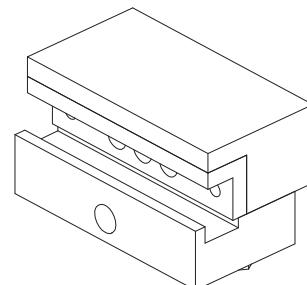

## MACHINING ON RAIL DRAIN HOLE AT THE INNER SIDE

M50-14

ATTENTION: THE MACHINING PRESENTED BELOW IS APPLIED TO THE RAIL ONLY IN REGIONS WHERE THE WIND SPEED IS EQUAL OR GREATER THAN 9 BEAUFORT

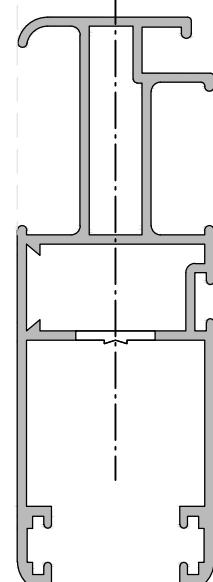

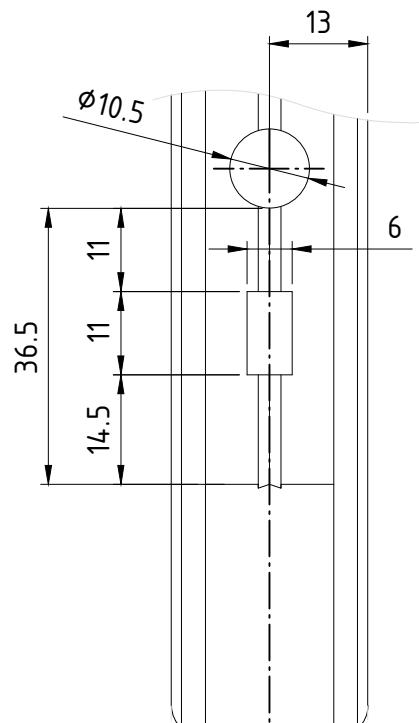

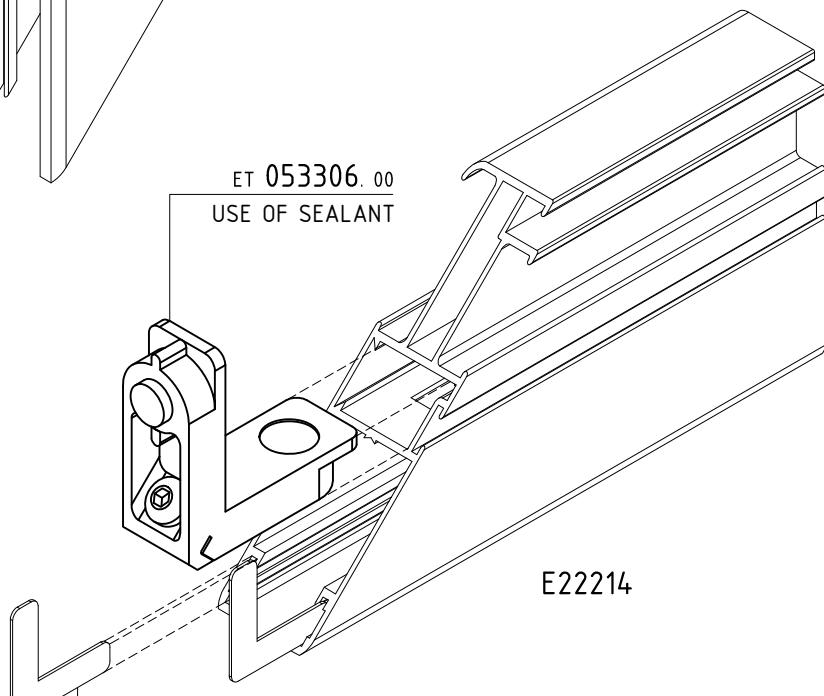

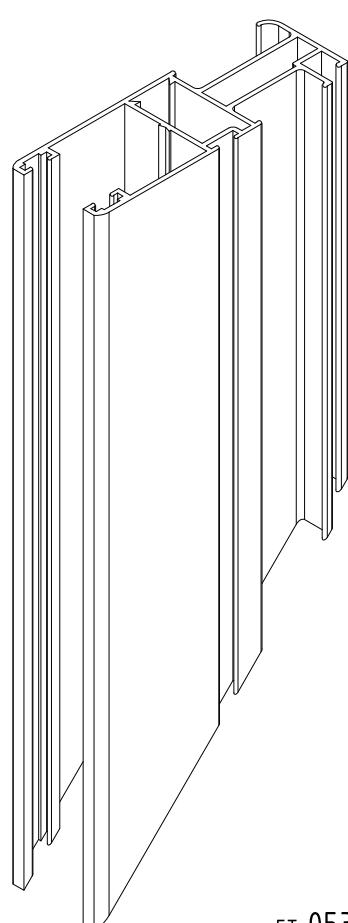

THE DRAIN HOLE IN THE RAIL AT THE SIDE OF THE INNER SASH IS DONE SO THAT TO DRAIN ANY DROPLETS IN CASE OF IN WATER INTRUSION. HOLE No 1 IS PUNCHED USING THE PRESS, WHILST HOLES No2 ARE DRILLED USING THE JIG (THAT COMES THE PUNCHING MACHINE). HOLE No3 IS DRILLED, USING A COLUMN DRILL. PLASTIC PLUG ET.074755.00 IS FIXED AT THE EXTERNAL SIDE OF HOLE No1. THE PLUG IS COMPOSED OF BASE a AND FIN b AND IS FIXED AS PRESENTED IN THE DRAWING

# sliding system with thermal break

E50

## INSTRUCTIONS FOR FITTING SEALING BLOCK ET.240810.00 & ET.240811.00

M50-32

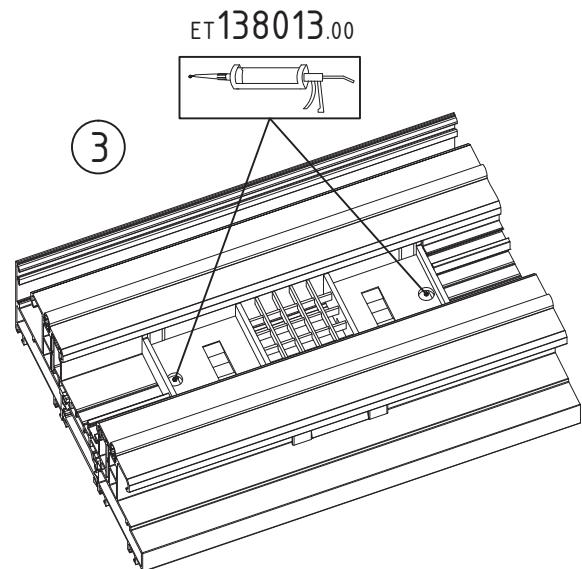

ET.240810.00  
ET.240811.00

SEALING BLOCK  
ET.240810.00 &  
ET.240811.00 IS INSERTED  
INTO THE BOTTOM RAIL  
BEFORE ASSEMBLING ALL  
PARTS OF THE RAIL.  
ALWAYS ENSURE THAT  
THE OPENING FORMED ON  
THE SEALING BLOCK IS  
POSITIONED AT THE SIDE  
OF THE CENTRAL DRAIN  
HOLE FORMED ON THE  
RAIL

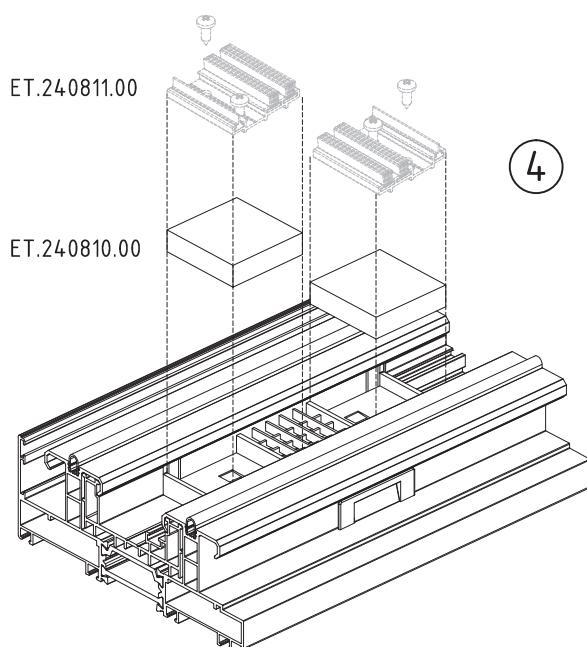

ET.080201.00

INSERT PLASTIC PROFILE  
ET.080201.00 INTO THE BOTTOM  
RAIL, AS PRESENTED IN PAGE  
M50-33, BEFORE ASSEMBLING ALL  
PARTS OF THE RAIL.

ET.138013.00

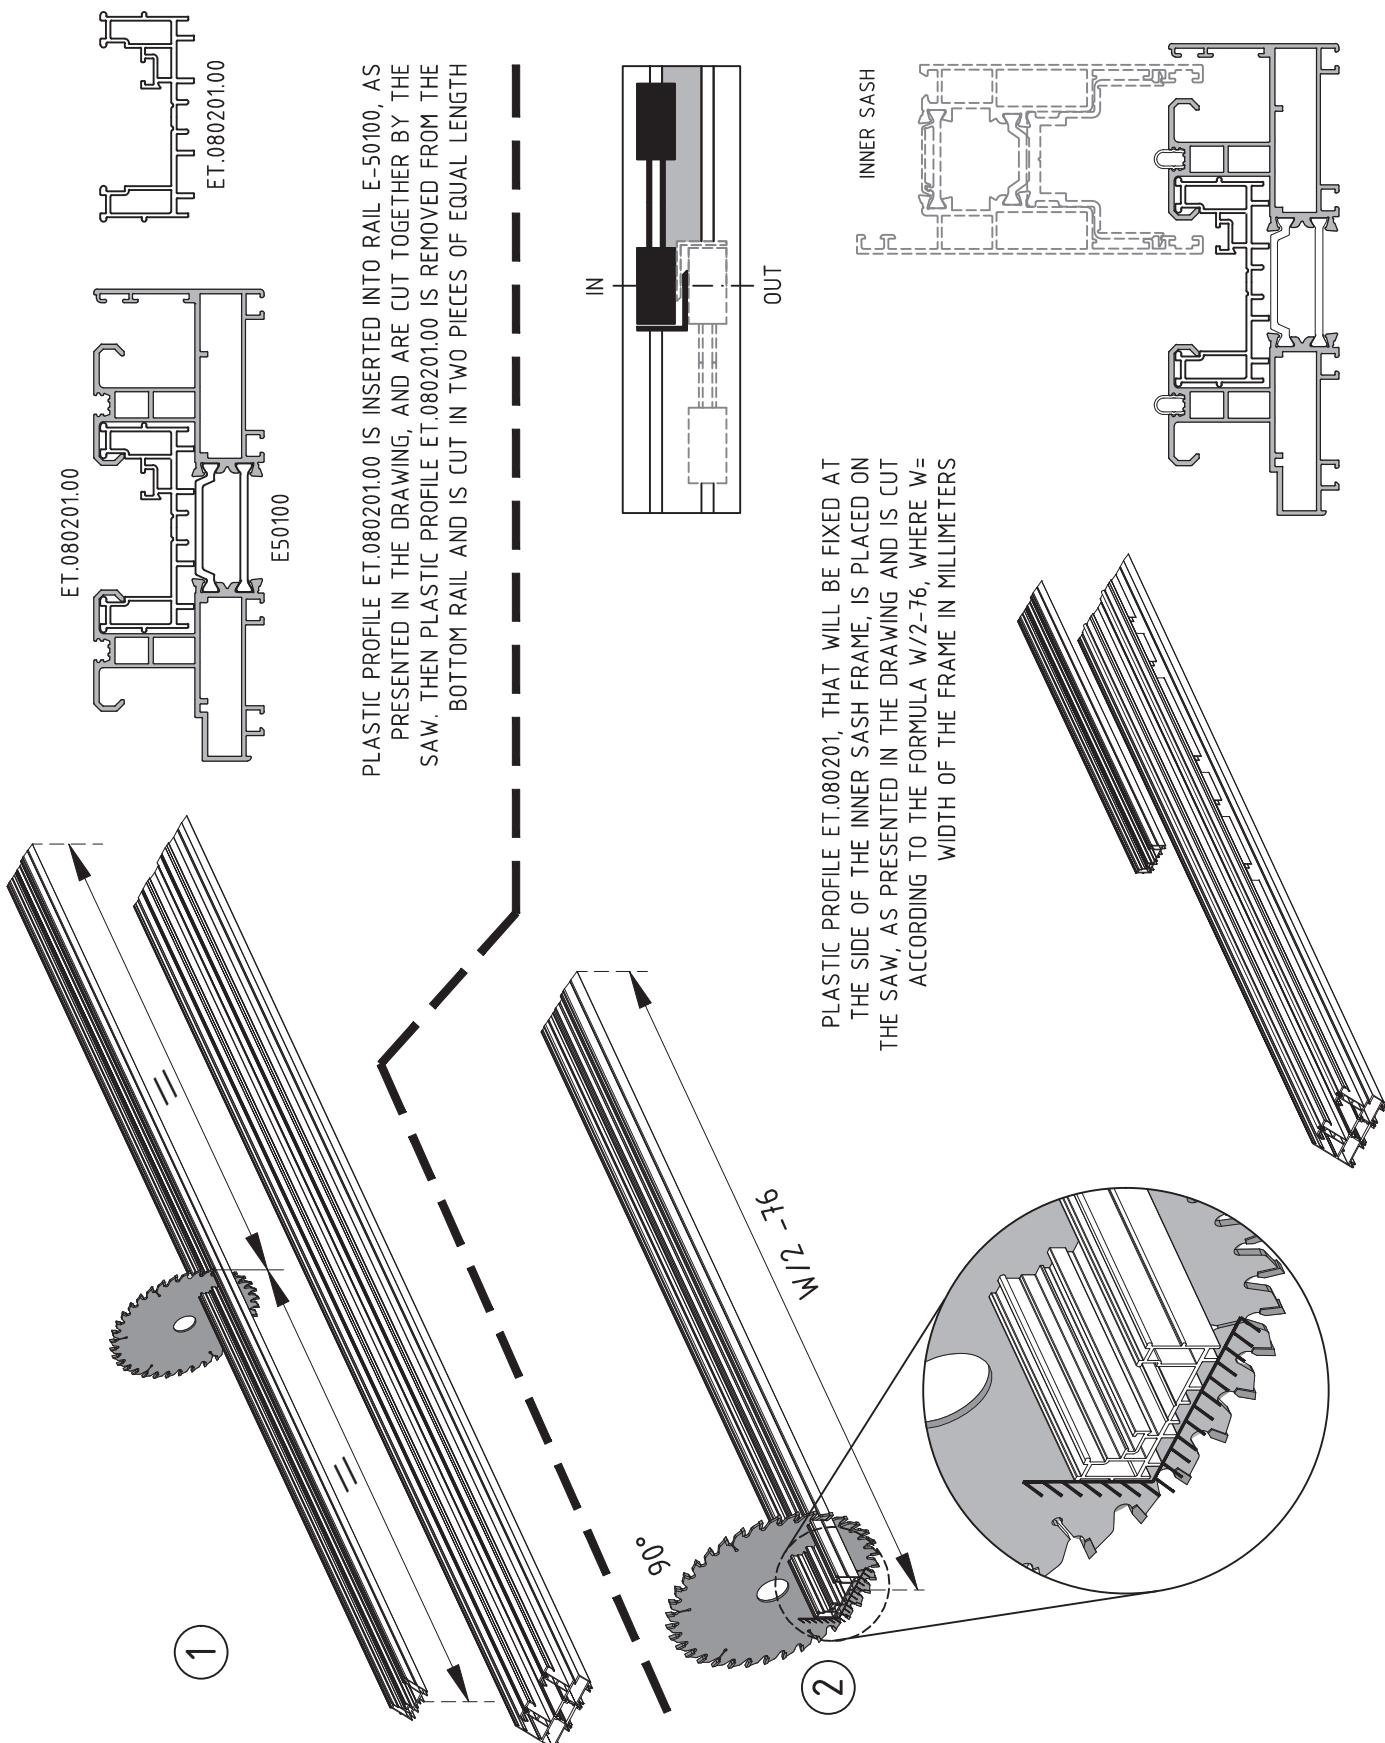

ALWAYS APPLY SEALANT  
ET.138013.00 INTO THE HOLES OF  
SEALING BLOCK ET.240810 &  
ET.240811.00, AS PRESENTED IN THE  
DRAWING

FIX INTO THE CAVITIES OF THE SEALING BLOCK THE FOAM  
ACCESSORIES (ET.240810.00 IN CASE OF USE OF LIFT & SLIDE  
HARDWARE) OR THE ALUMINUM PROFILE WITH THE PILE  
WEATHERSEAL AND GASKET (ET.240811.00 FOR SASH FRAMES  
WITH SIMPLE ROLLERS)

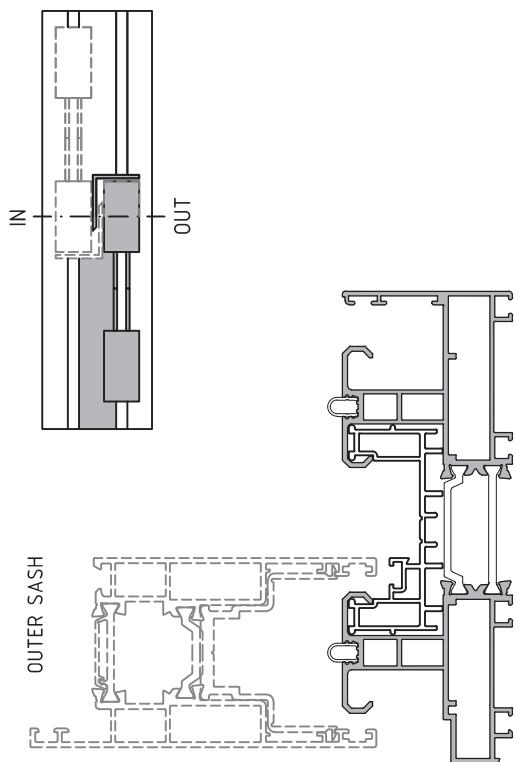

## CUTTING ET.080201 FOR FIXING ON BOTTOM RAIL (1)

M50-33

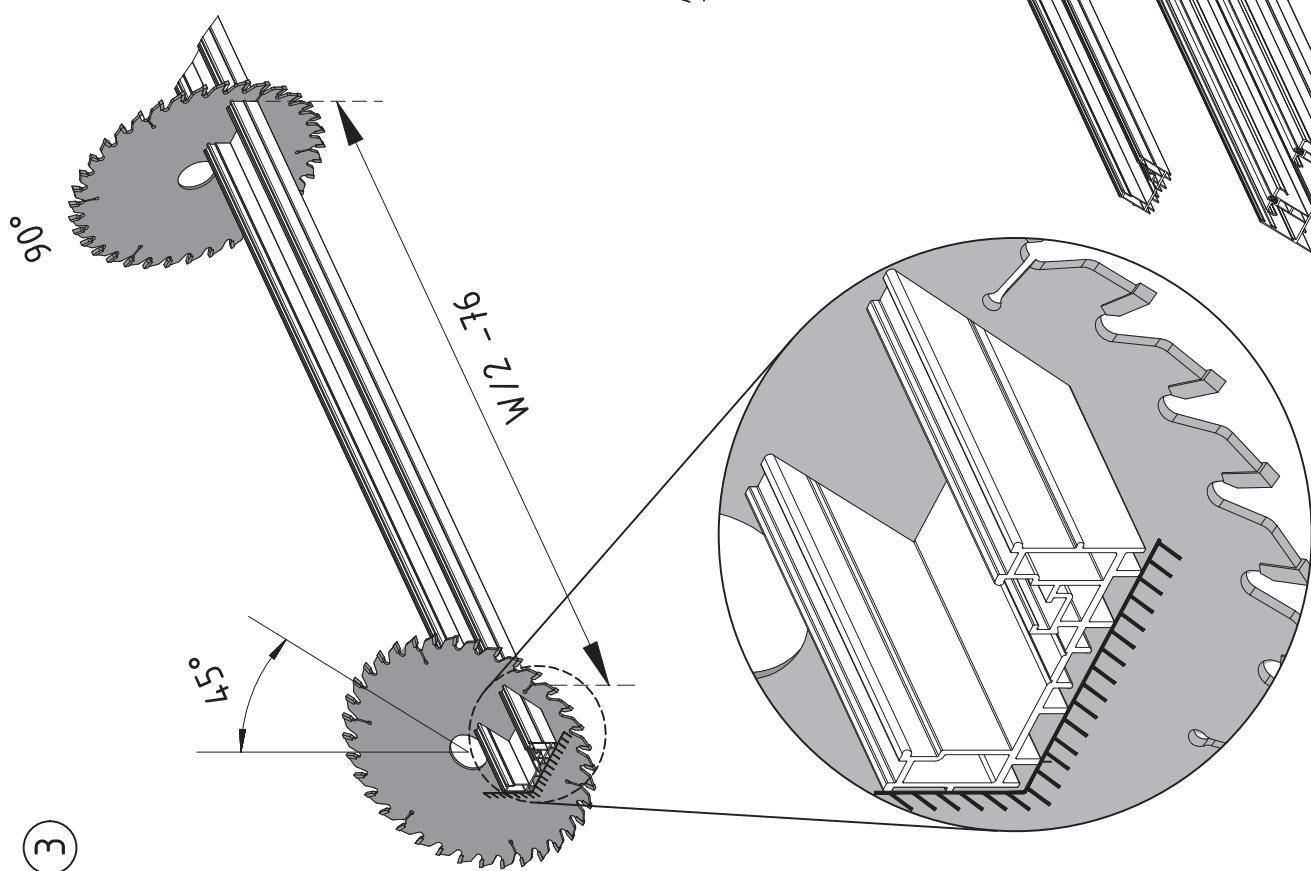

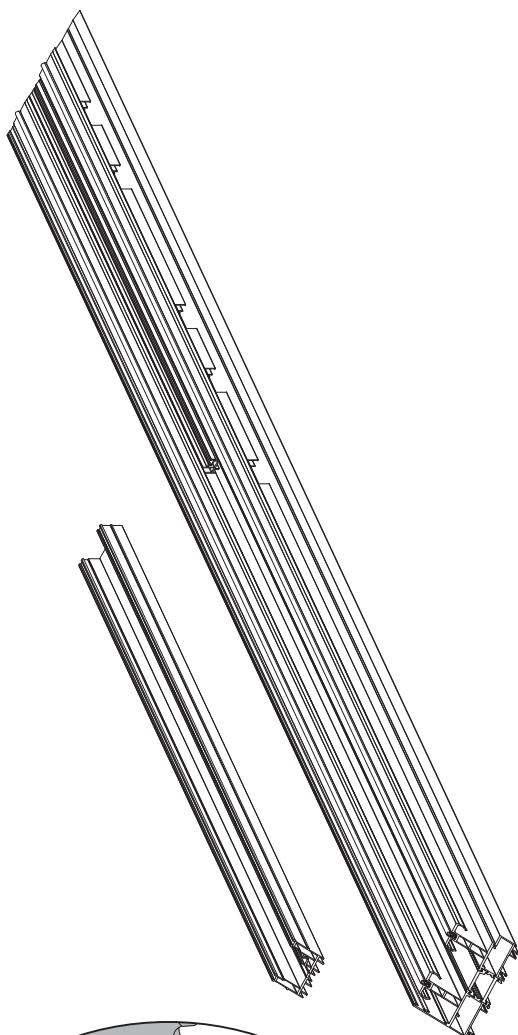

## CUTTING ET.080201 FOR FIXING ON BOTTOM RAIL (2)

M50-34

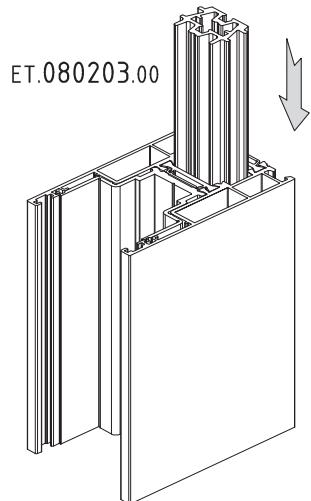

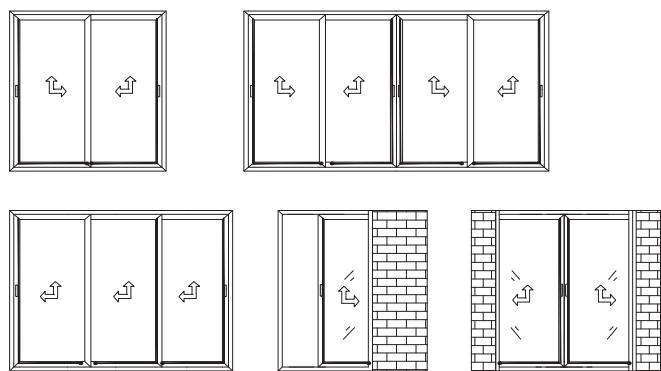

PLASTIC PROFILE ET.080201, THAT WILL BE FIXED AT THE SIDE OF THE OUTER SASH FRAME, IS PLACED ON THE SAW, AS PRESENTED IN THE DRAWING AND IS CUT ACCORDING TO THE FORMULA  $W/2-76$ , WHERE  $W$  = WIDTH OF THE FRAME IN MILLIMETRES

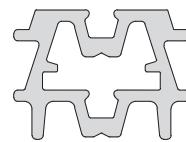

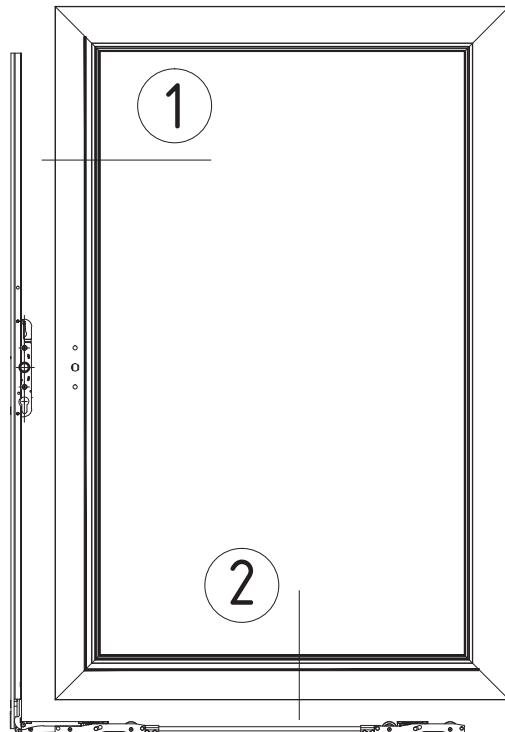

## APPLICATION OF ET.080203 FOR FIXING L&S HARDWARE

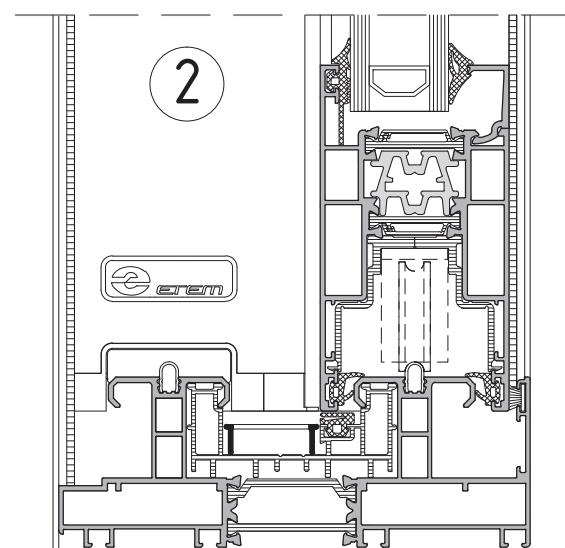

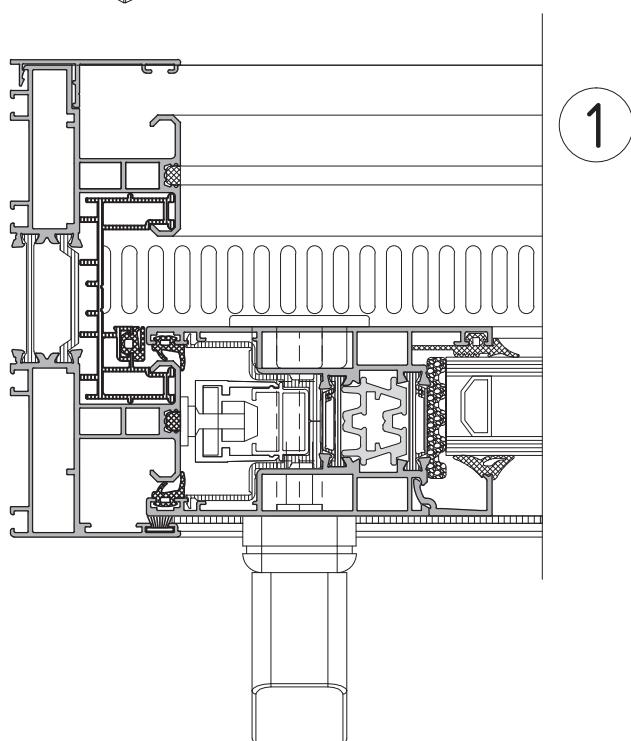

M50-35

PLASTIC PROFILE ET.080203.00, IS PLACED ONLY ON THE SIDE OF THE SASH FRAME, WHERE THE GEAR OF THE L&S HARDWARE IS TO BE FIXED, AS WELL AS, ON THE BOTTOM SIDE OF THE SASH FRAME, WHERE THE ROLLERS ARE FIXED. THE PLASTIC PROFILE IS INSERTED IN THE SASH FRAME AND ARE CUT TOGETHER BY THE SAW

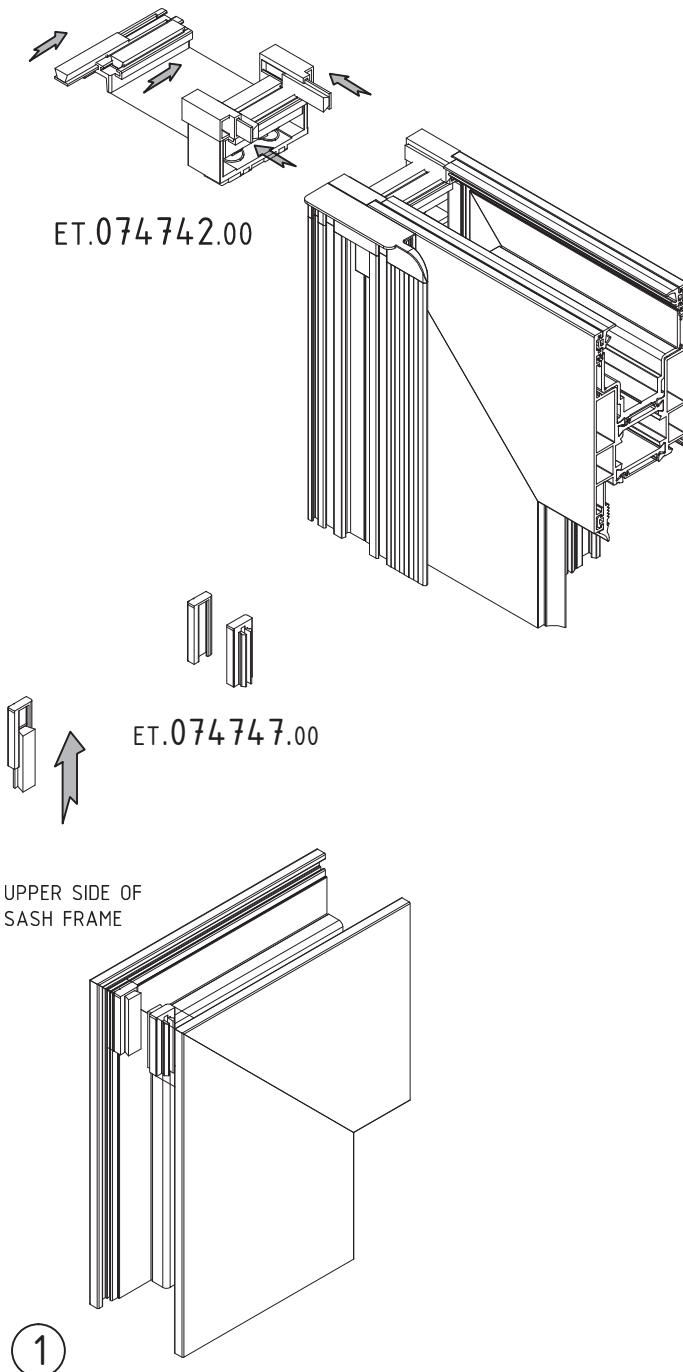

ET.080203.00

## APPLICATION OF ET.080203 FOR FIXING L&S HARDWARE

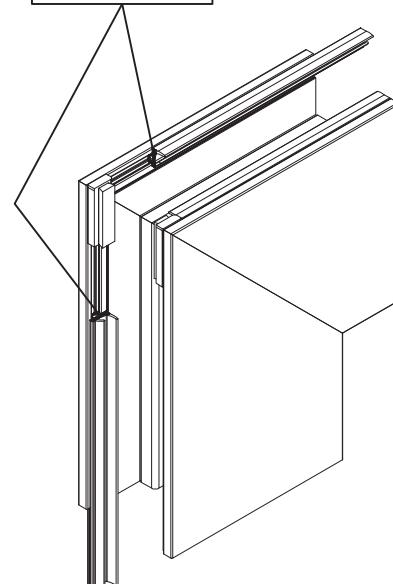

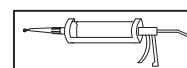

M50-36

ARTICLES ET.074747.00, ARE FIXED AT THE UPPER INTERNAL AND EXTERNAL SIDE OF THE SASH FRAME. ALWAYS PLACE IN TO THE GROOVE THE PILE WEATHERSEAL, BEFORE FIXING IT ONTO THE SASH FRAME, AS PRESENTED IN THE DRAWINGS

ALWAYS PLACE IN ADVANCE THE SEALING BRUSHES INTO THE GROOVES OF PLASTIC PLUG ET.080203.00, AS PRESENTED IN THE DRAWINGS, BEFORE FIXING IT ONTO THE INTERLOCK PROFILE

ET138013.00

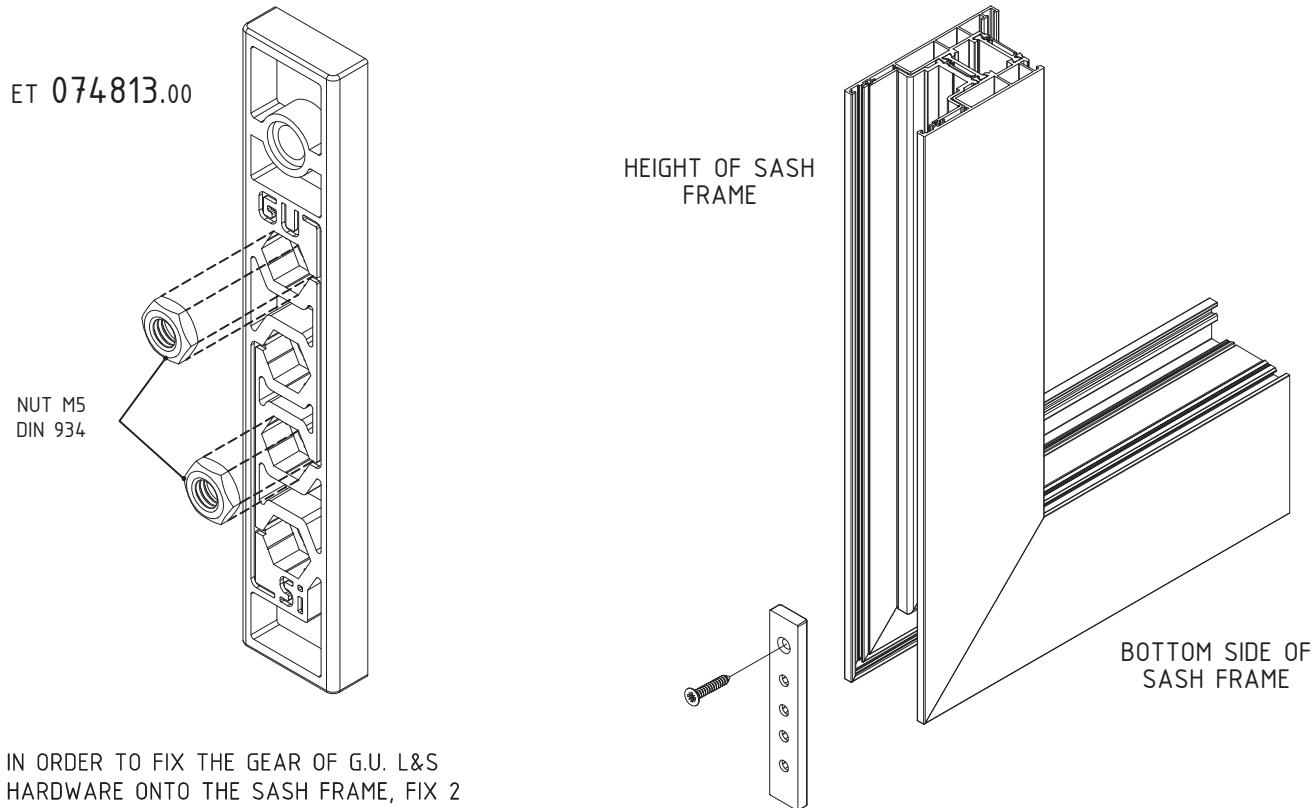

②

ALWAYS APPLY SEALANT ET.138013.00, AT THE SIDE OF GASKET ET.130771, THAT WILL COME INTO CONTACT WITH ET.130771.00, AS PRESENTED IN THE DRAWING

## INSTRUCTIONS FOR FIXING ET.074813 ONTO THE SASH FRAME

M50-37

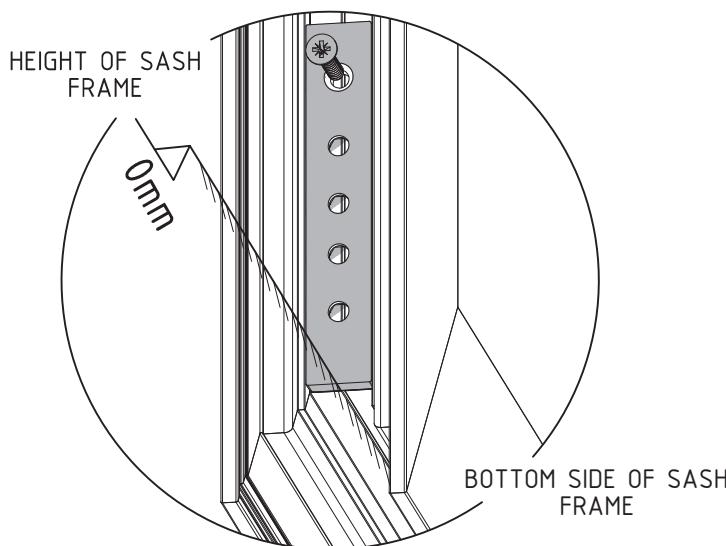

IN ORDER TO FIX THE GEAR OF G.U. L&S HARDWARE ONTO THE SASH FRAME, FIX 2 M5 NUTS (DIN 934) ONTO ARTICLE ET.074813.00, ACCORDING TO THE DRAWING

ARTICLE ET.074813.00 IS FIXED ON THE BOTTOM SIDE OF THE HEIGHT OF THE SASH FRAME, AT THE SIDE WHERE THE GEAR OF THE HARDWARE IS TO BE FIXED.

ATTENTION: THE FIXING HOLE OF ET.074813.00 MUST BE ORIENTED TO THE UPPER SIDE OF THE HEIGHT OF THE SASH FRAME. THE SIDE OF ET.074813.00, WHERE THE NUTS ARE ENCASED, WILL BE IN CONTACT WITH THE PLASTIC DRAIN PROFILE, FIXED ONTO THE SASH FRAME

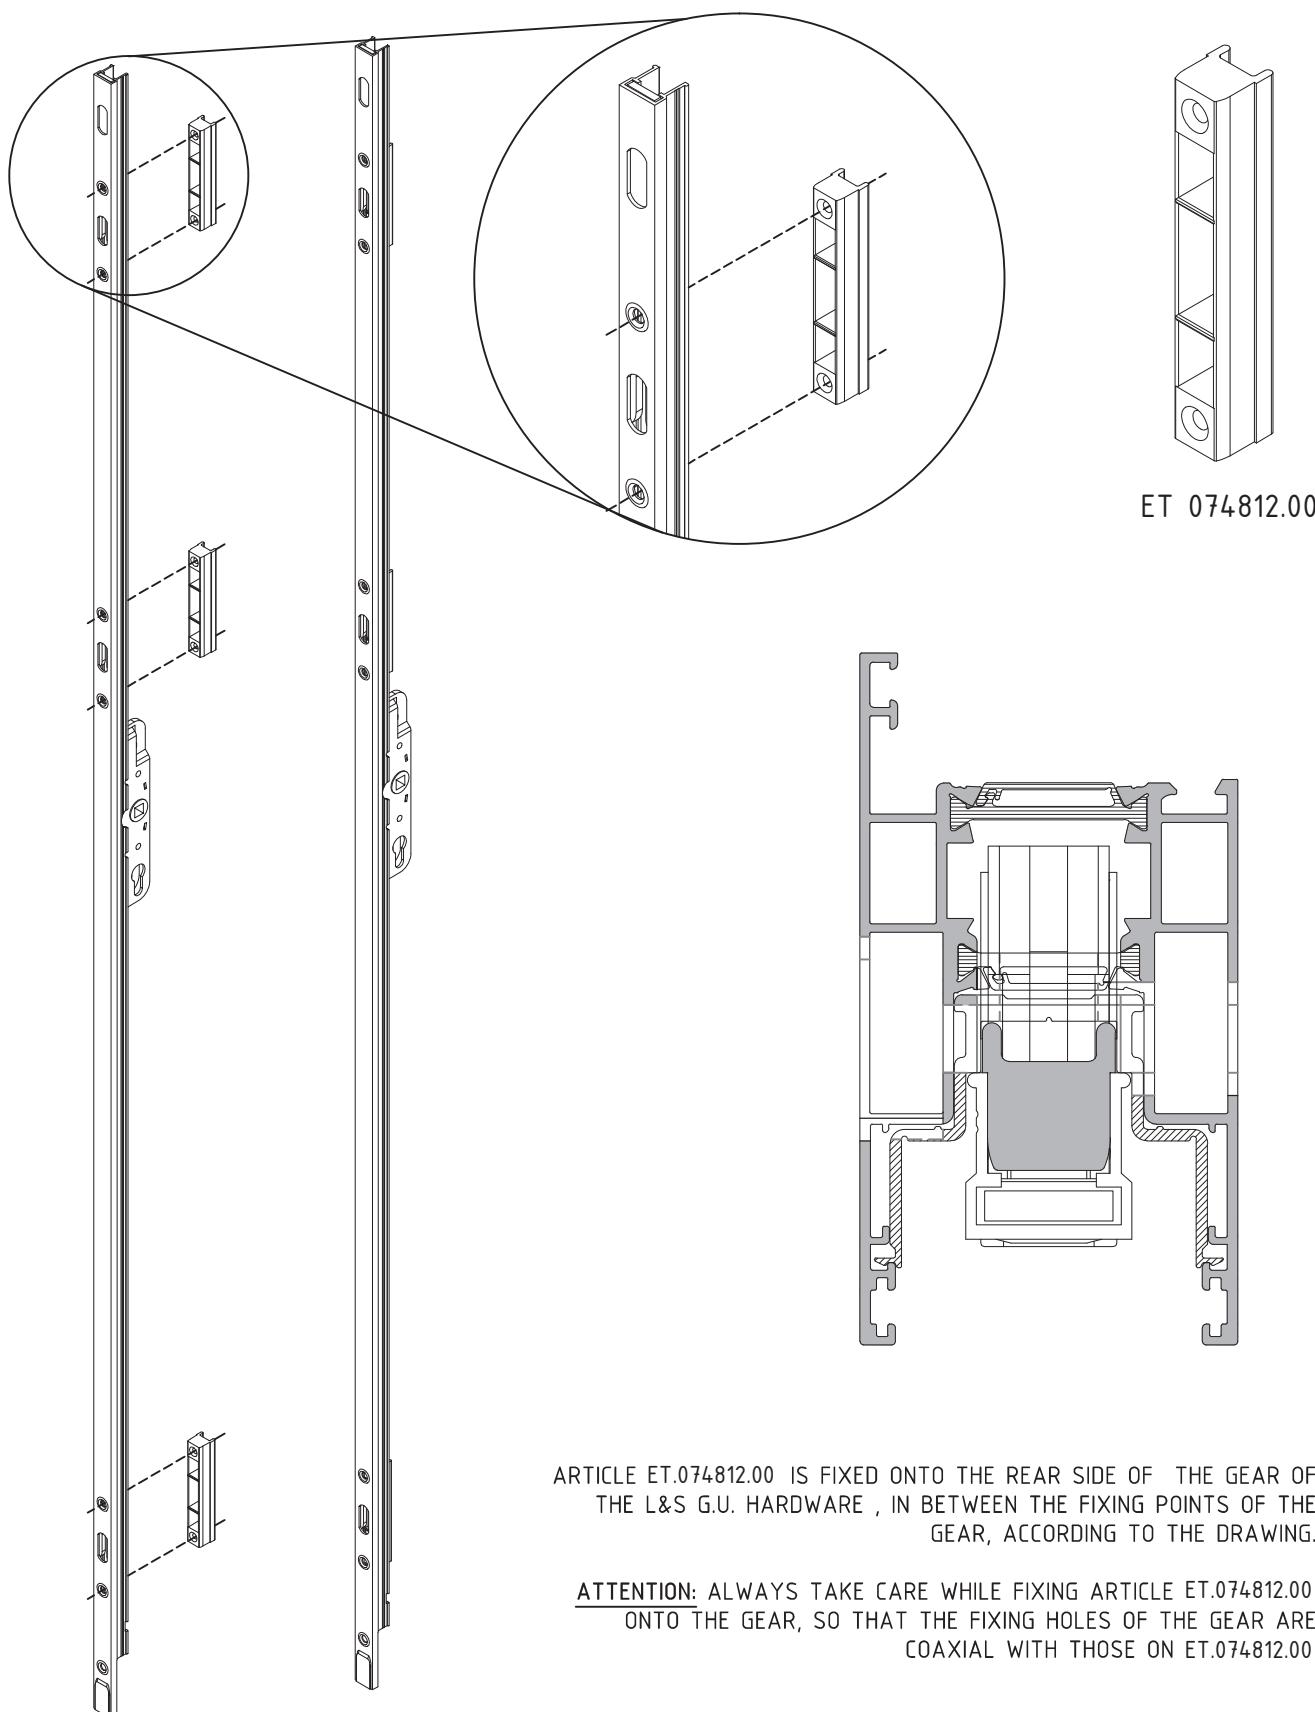

THE BOTTOM SIDE OF ET.074813.00 MUST BE ALIGNED WITH THE BOTTOM SIDE OF THE PLASTIC PROFILE FIXED ONTO THE BOTTOM SIDE OF THE SASH FRAME, AS PRESENTED IN THE DRAWING.

ET.074813.00 IS FIXED ONTO THE SASH FRAME USING ONE (1) SHEET METAL SCREW 4.8x30mm DIN 7982

## INSTRUCTIONS FOR FIXING ET.074812 ONTO THE GEAR OF THE HARDWARE

M50-38

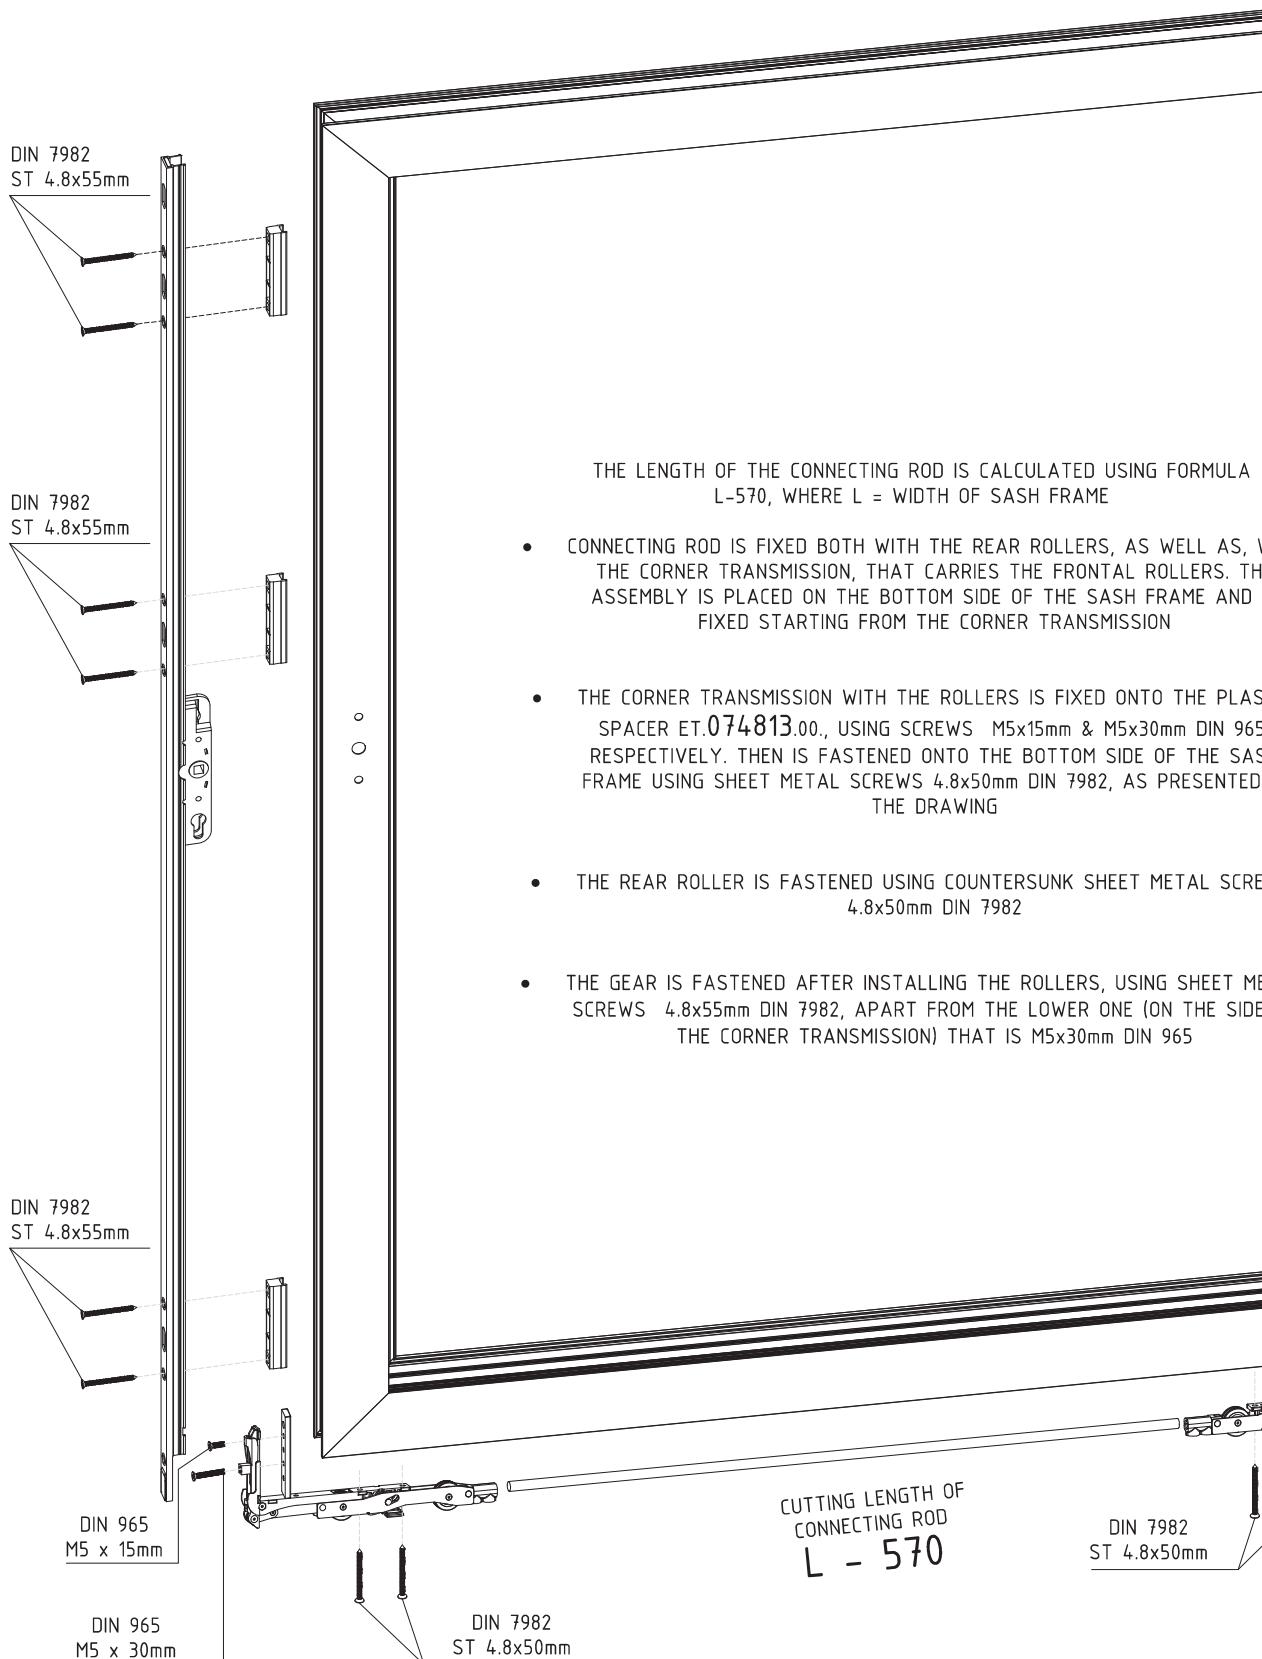

ARTICLE ET.074812.00 IS FIXED ONTO THE REAR SIDE OF THE GEAR OF THE L&S G.U. HARDWARE , IN BETWEEN THE FIXING POINTS OF THE GEAR, ACCORDING TO THE DRAWING.

ATTENTION: ALWAYS TAKE CARE WHILE FIXING ARTICLE ET.074812.00 ONTO THE GEAR, SO THAT THE FIXING HOLES OF THE GEAR ARE COAXIAL WITH THOSE ON ET.074812.00

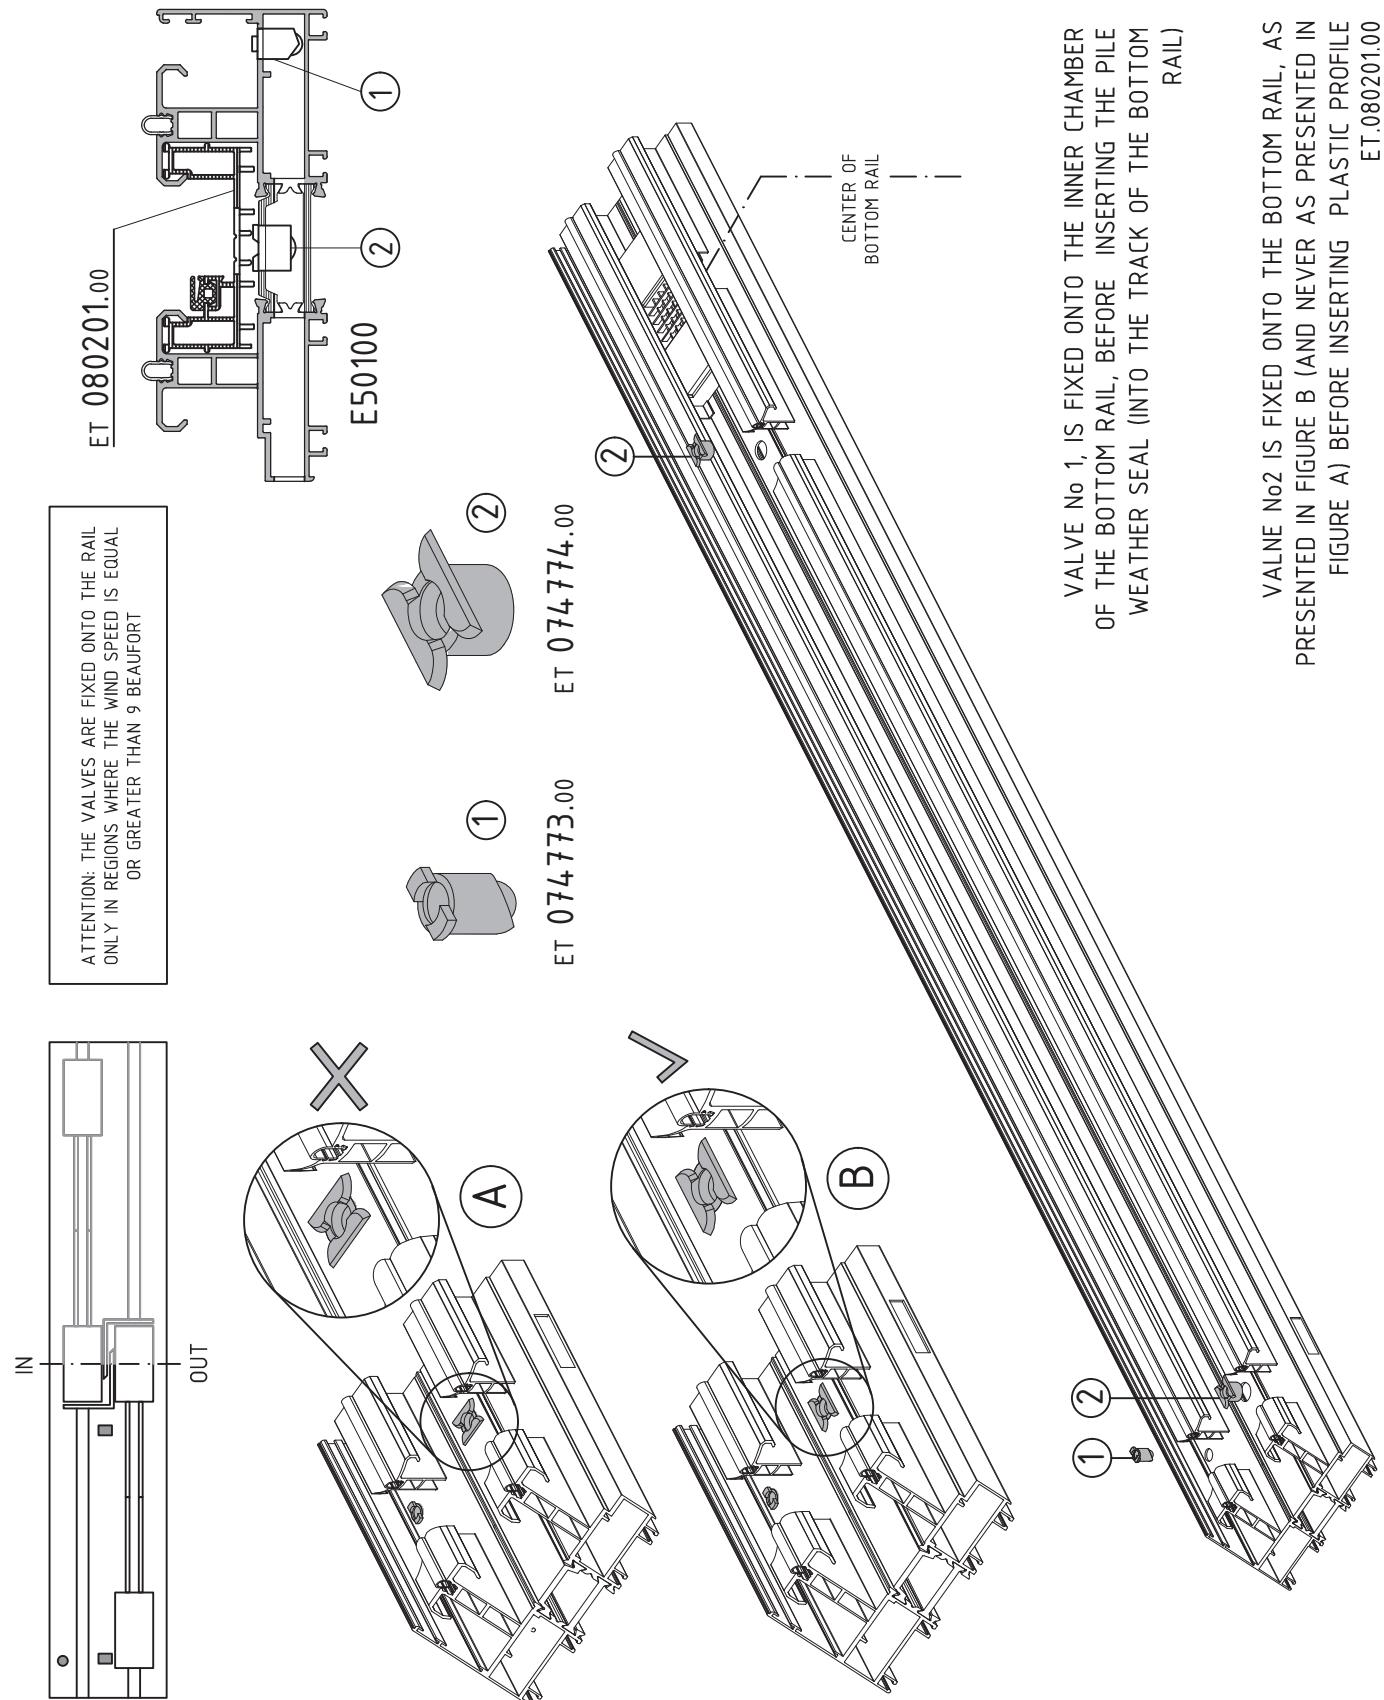

## INSTRUCTIONS FOR FIXING G.U. L&S HARDWARE ONTO THE SASH FRAME

M50-39

## FIXING VALVES ONTO THE BOTTOM RAIL E50100

M50-40

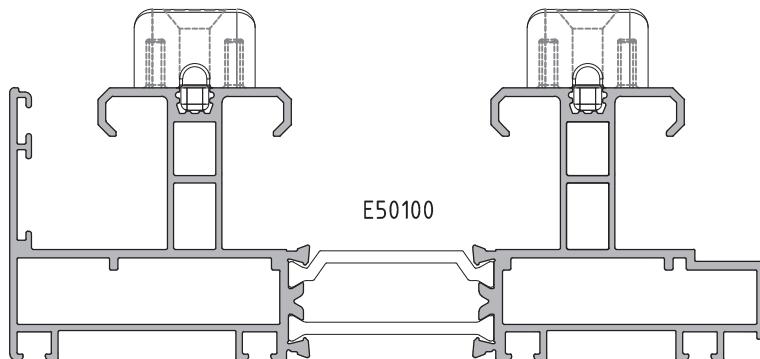

## GUIDELINES FOR THE SELECTION OF STOP PER RAIL

M50-41

ET 074748.00

ET 074748.00

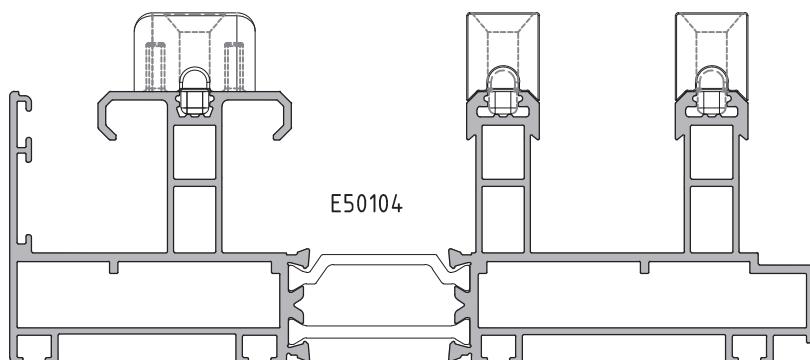

STOP ET.074748.00, IS ALWAYS FIXED AT THE TRACK OF THE RAIL, WHERE THE SASH WITH THE GLAZING IS TO PLACED, WHILST STOP ET.074749.00 IS FIXED AT THE TRACK OF THE RAIL, WHERE THE SASH WITH THE INSECT SCREEN AND/OR THE SHUTTER IS TO BE PLACED. ET.074748.00 & ET.074749.00 ARE FIXED AT TOP AND BOTTOM RAIL.

ET 074748.00

ET 074749.00

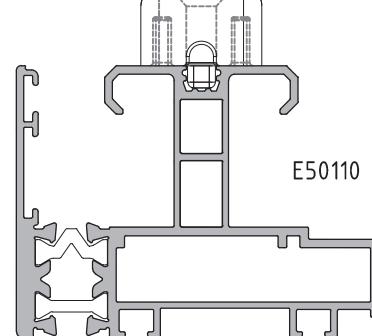

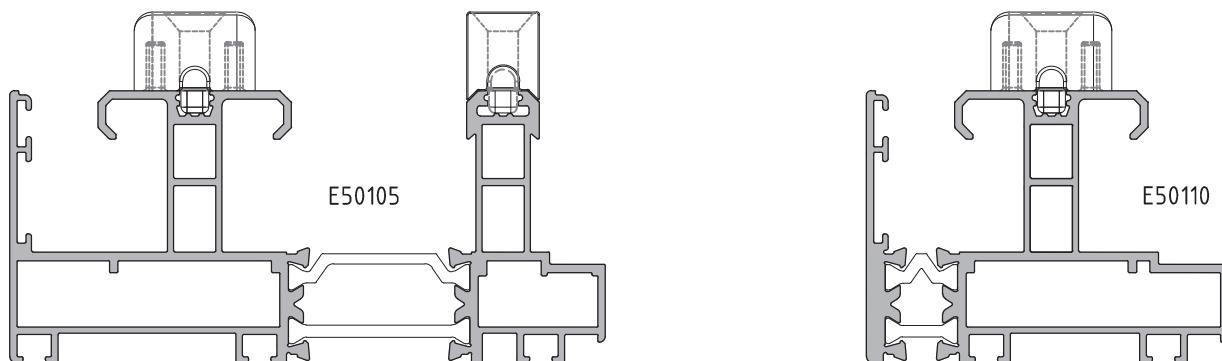

ET 074749.00

ET 074748.00

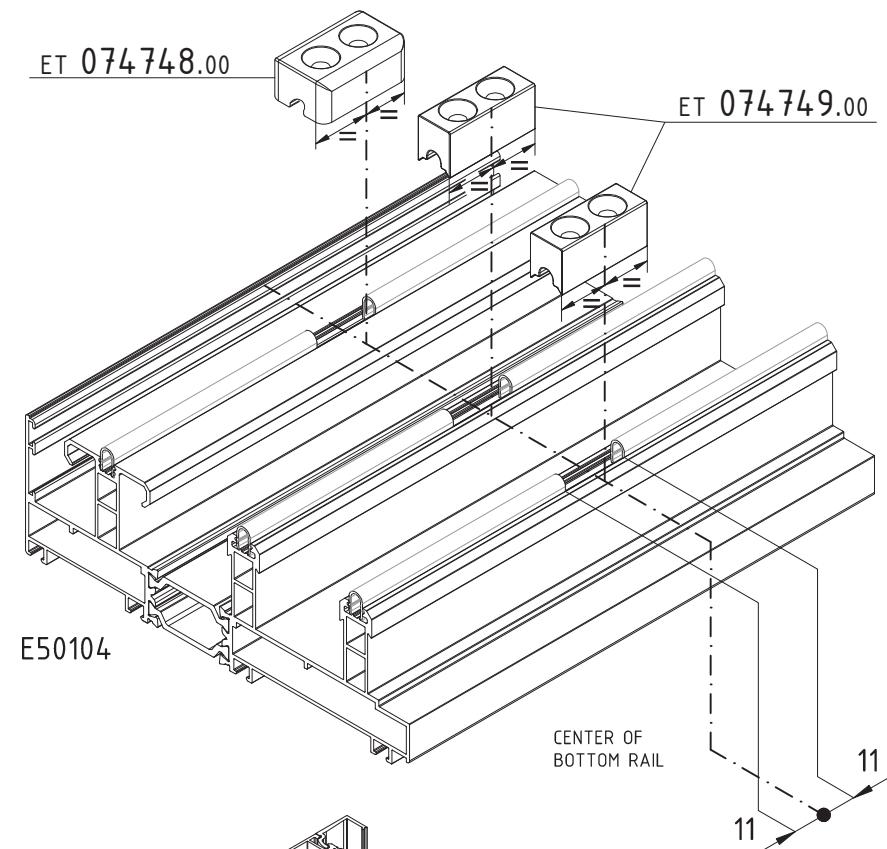

ET 074749.00

ET 074748.00

## FIXING STOP ON RAIL (BOTTOM SIDE)

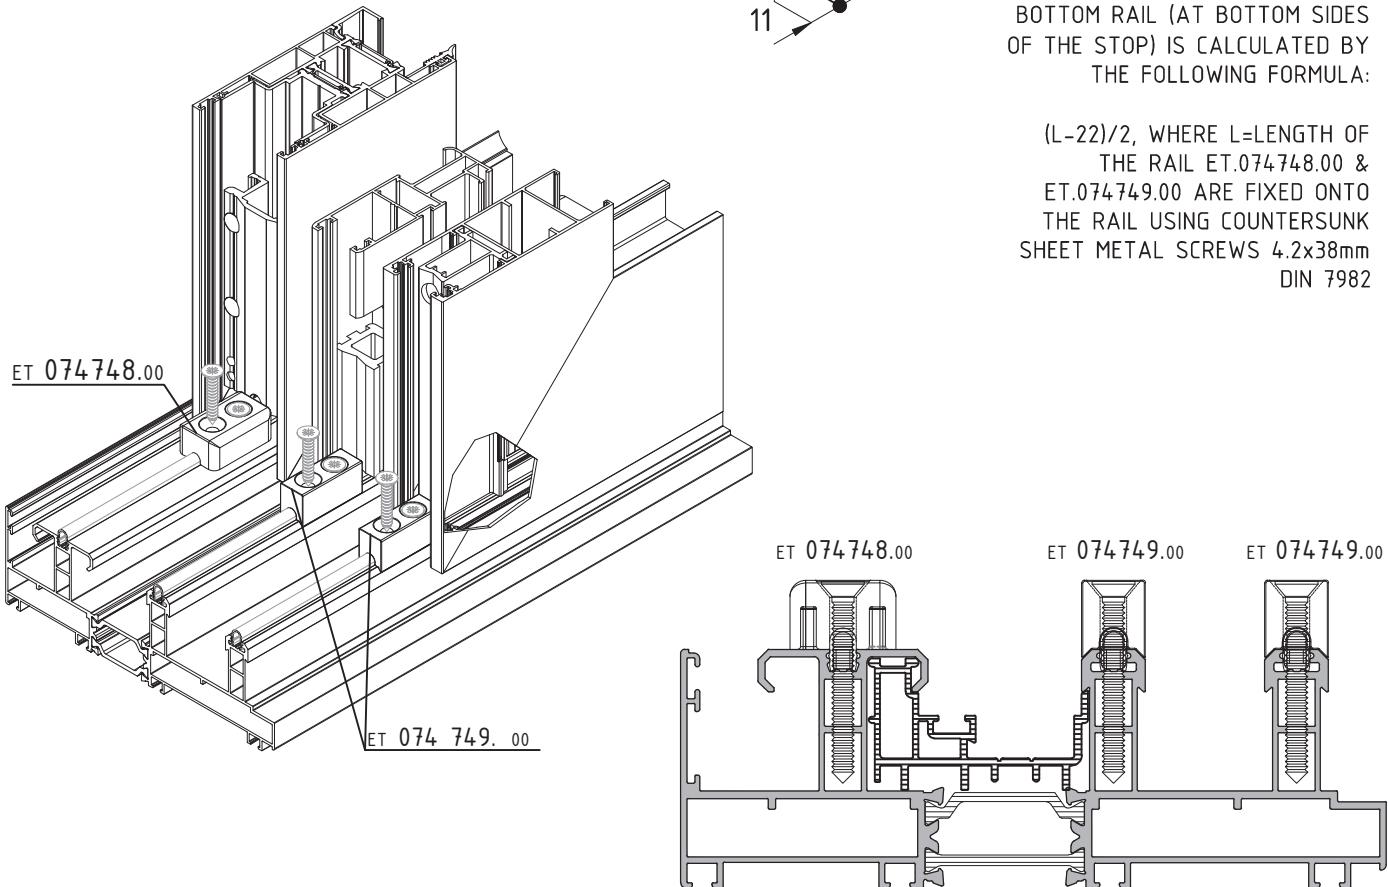

M50-42

STOP ET.074748.00, IS ALWAYS FIXED AT THE TRACK OF THE RAIL, WHERE THE SASH WITH THE GLAZING IS TO PLACED, WHILST STOP ET.074749.00 IS FIXED AT THE TRACK OF THE RAIL, WHERE THE SASH WITH THE INSECT SCREEN AND/OR THE SHUTTER IS TO BE PLACED.

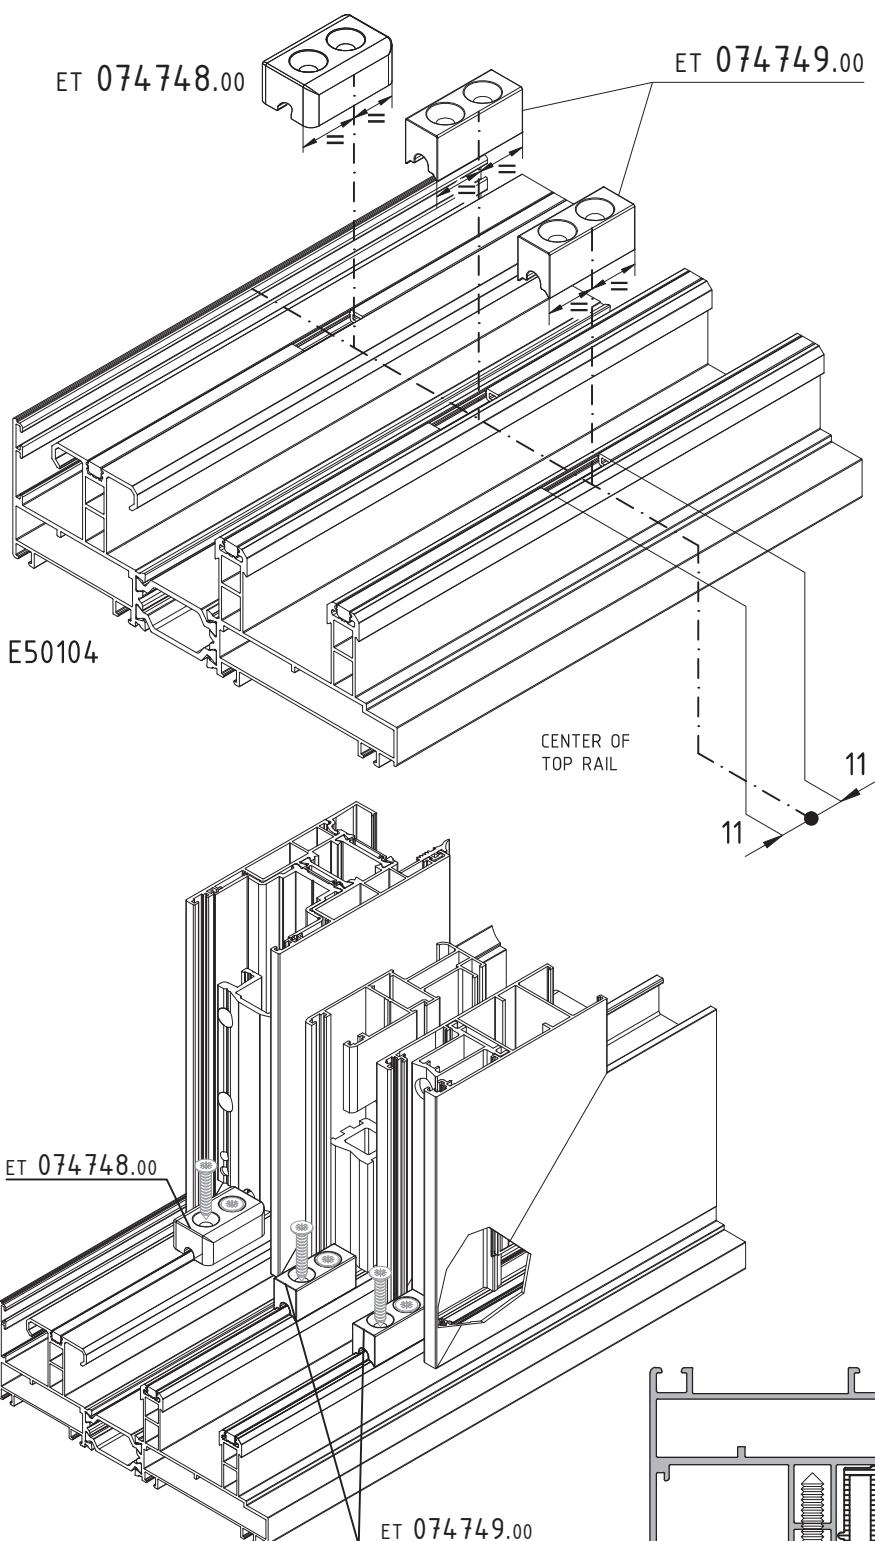

ET.074748.00 & ET.074749.00 ARE FIXED AT TOP AND BOTTOM RAIL. THE CUTTING LENGTH OF EACH INOX RAIL ET.082201.00, THAT IS TO BE FIXED ONTO THE BOTTOM RAIL (AT BOTTOM SIDES OF THE STOP) IS CALCULATED BY THE FOLLOWING FORMULA:

$(L-22)/2$ , WHERE L=LENGTH OF THE RAIL ET.074748.00 & ET.074749.00 ARE FIXED ONTO THE RAIL USING COUNTERSUNK SHEET METAL SCREWS 4.2x38mm DIN 7982

## FIXING STOP ON RAIL (TOP SIDE)

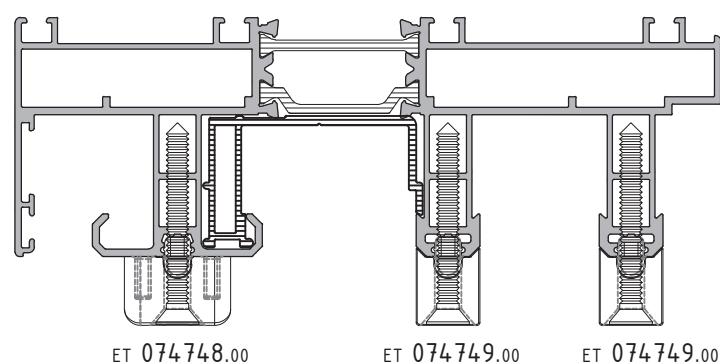

M50-43

STOP ET.074748.00, IS ALWAYS FIXED AT THE TRACK OF THE RAIL, WHERE THE SASH WITH THE GLAZING IS TO PLACED, WHILST STOP ET.074749.00 IS FIXED AT THE TRACK OF THE RAIL, WHERE THE SASH WITH THE INSECT SCREEN AND/OR THE SHUTTER IS TO BE PLACED.

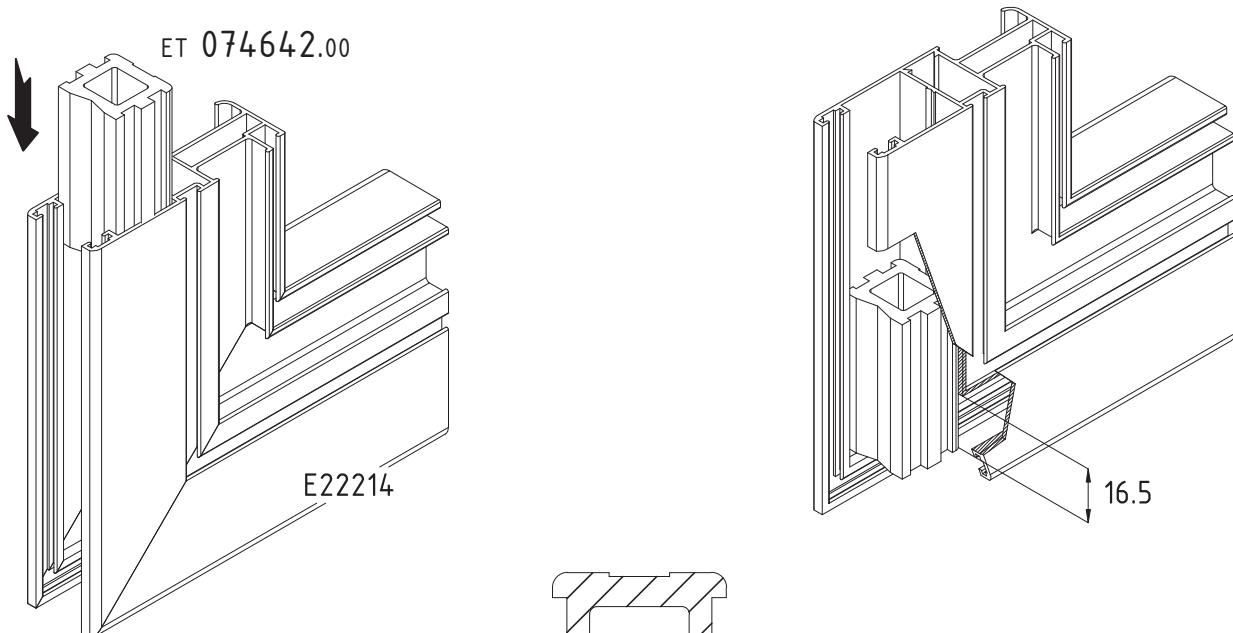

ET.074748.00 & ET.074749.00 ARE FIXED AT TOP AND BOTTOM RAIL.

THE CUTTING LENGTH OF EACH GASKET ET.130770.00, THAT IS TO BE FIXED ONTO THE BOTTOM RAIL (AT BOTTOM SIDES OF THE STOP) IS CALCULATED BY THE FOLLOWING FORMULA:  
 $(L-22)/2$ , WHERE L=LENGTH OF THE RAIL ET.074748.00 & ET.074749.00 ARE FIXED ONTO THE RAIL USING COUNTERSUNK SHEET METAL SCREWS 4.2x38mm DIN 7982

## FIXING EPDM STOP ON INSECT SCREEN E22214

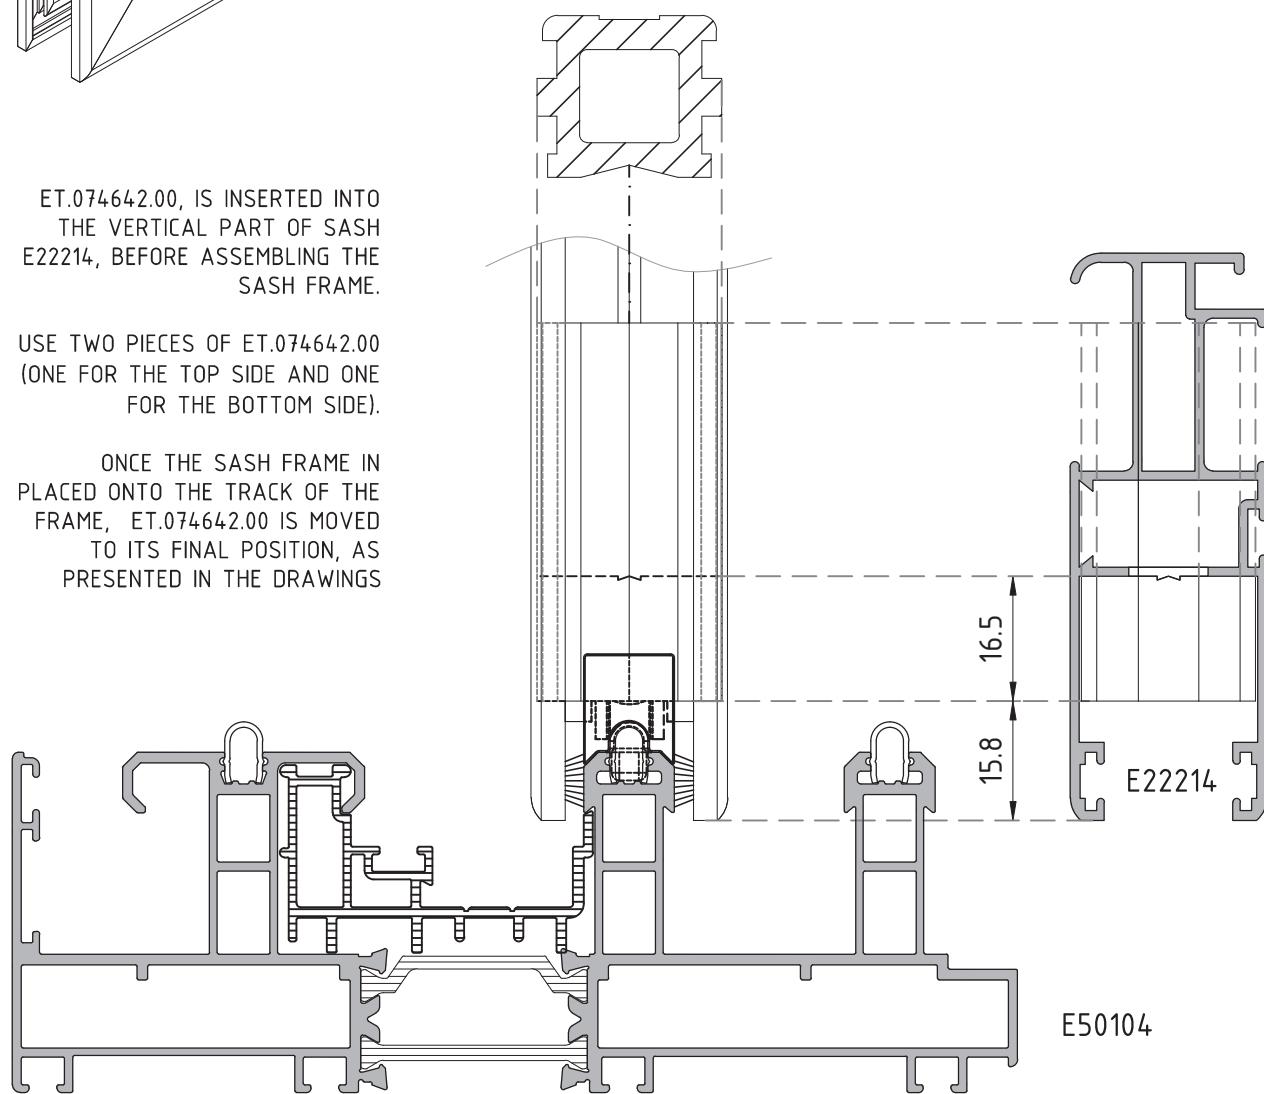

M50-44

ET.074642.00, IS INSERTED INTO THE VERTICAL PART OF SASH E22214, BEFORE ASSEMBLING THE SASH FRAME.

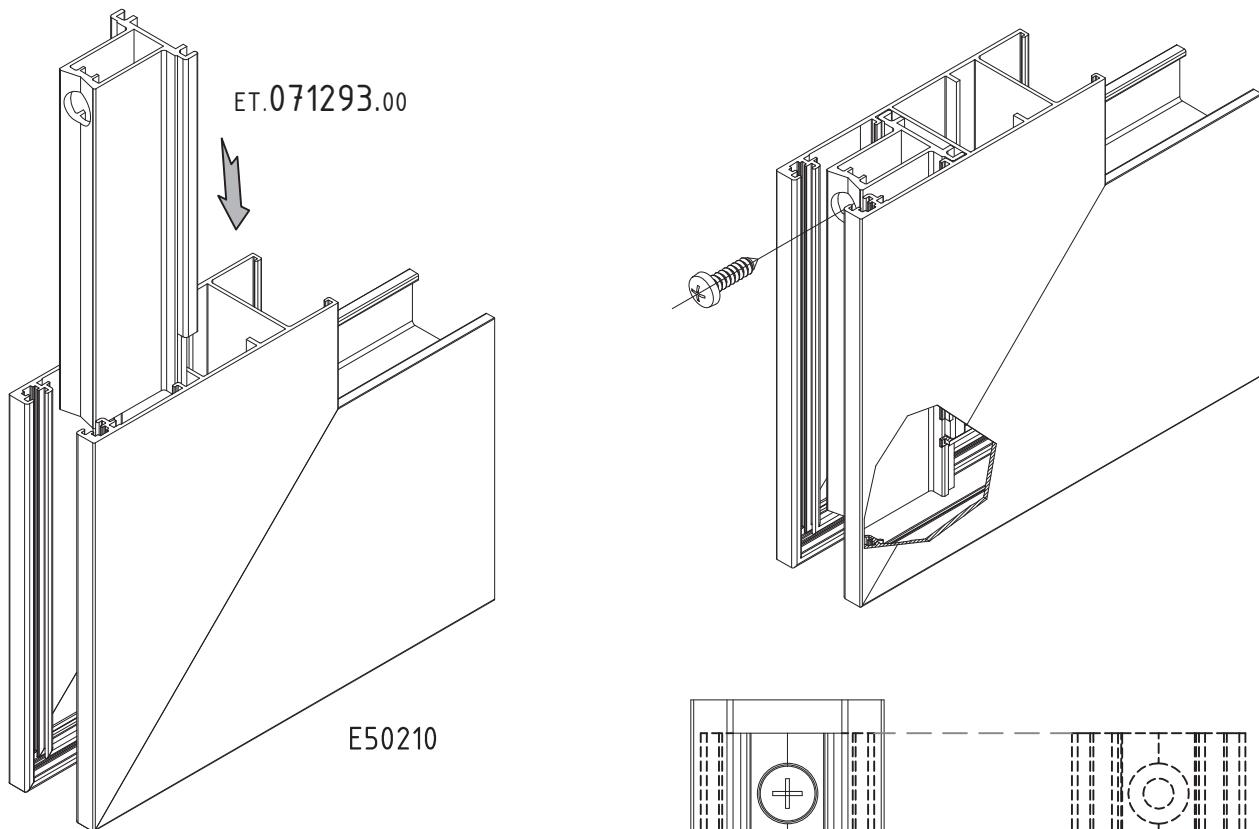

USE TWO PIECES OF ET.074642.00 (ONE FOR THE TOP SIDE AND ONE FOR THE BOTTOM SIDE).

ONCE THE SASH FRAME IS PLACED ONTO THE TRACK OF THE FRAME, ET.074642.00 IS MOVED TO ITS FINAL POSITION, AS PRESENTED IN THE DRAWINGS

FIXING STOP ON E50210

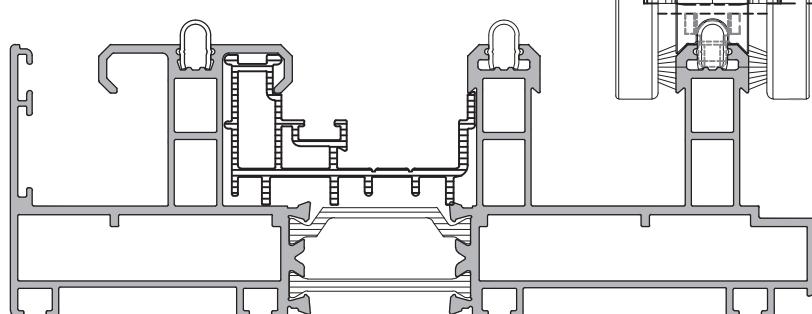

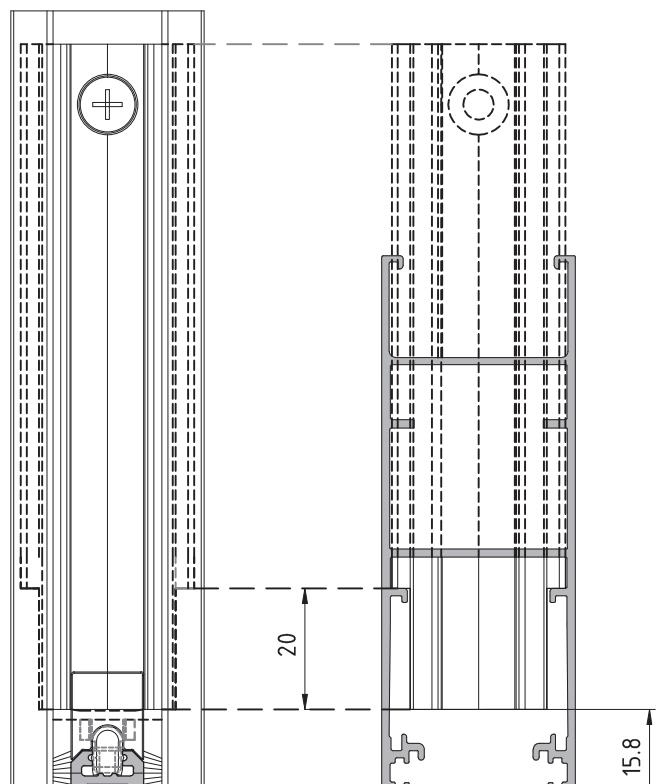

M50-45

ET.071293.00, IS INSERTED INTO THE VERTICAL PART OF SASH E-50210, BEFORE ASSEMBLING THE SASH FRAME.

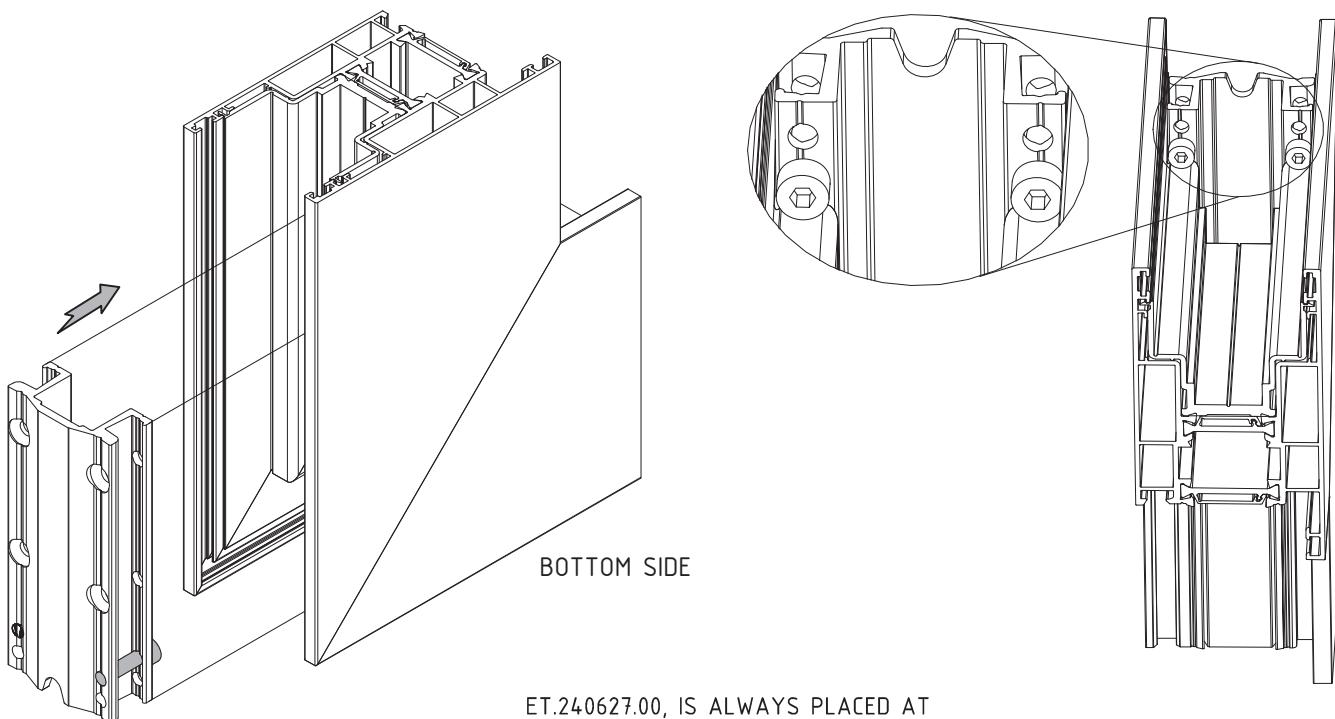

USE TWO PIECES OF ET.071293.00 (ONE FOR THE TOP SIDE AND ONE FOR THE BOTTOM SIDE).

ONCE THE SASH FRAME IS PLACED ONTO THE TRACK OF THE FRAME, ET.074642.00 IS MOVED TO ITS FINAL POSITION, AS PRESENTED IN THE DRAWINGS, AND IS FIXED BY ONE (1) PAN HEAD SHEET METAL SCREW 4.2x20mm DIN 7981

## FIXING STOP ON E50201 & E50202 (BOTTOM SIDE)

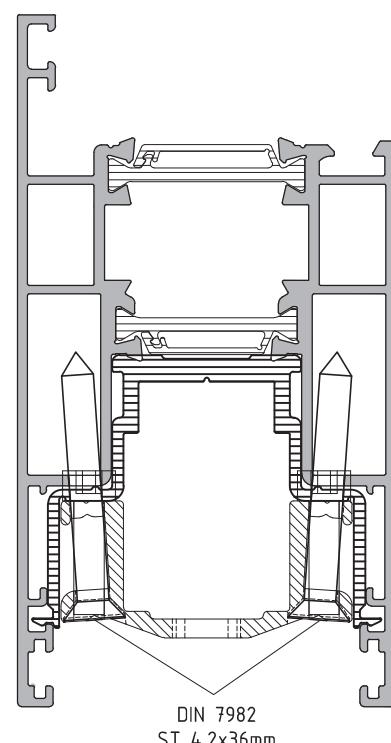

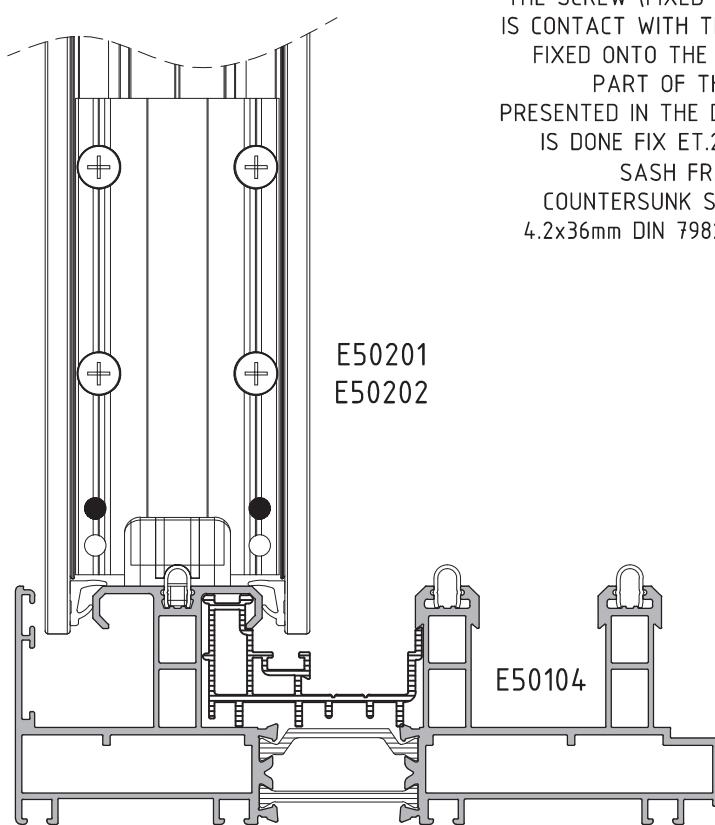

M50-46

ET 240 627.00

ET.240627.00, IS ALWAYS PLACED AT THE LOWER SIDE OF THE SASH FRAME E-50201 & E-50202, AFTER PLACING THE SASH FRAME ONTO THE RAIL.

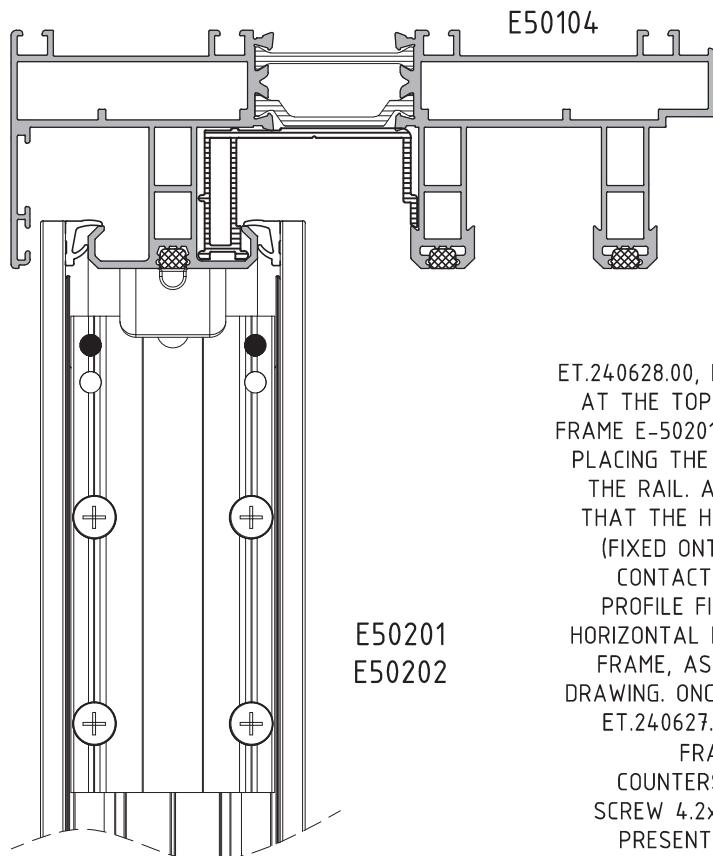

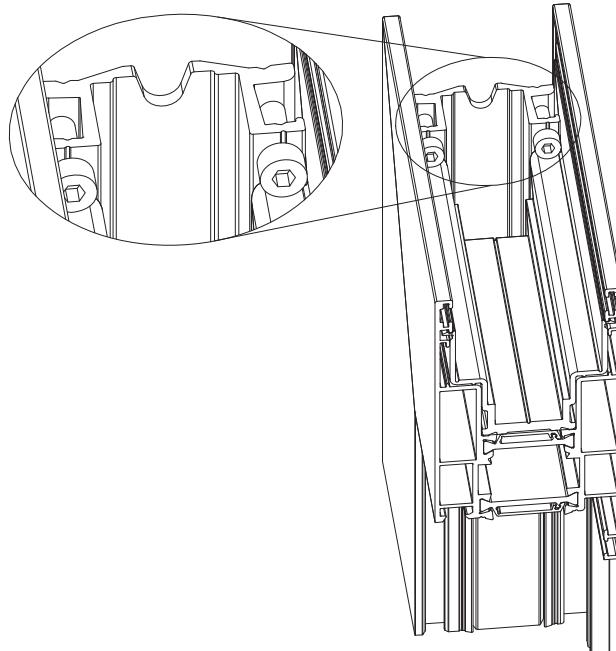

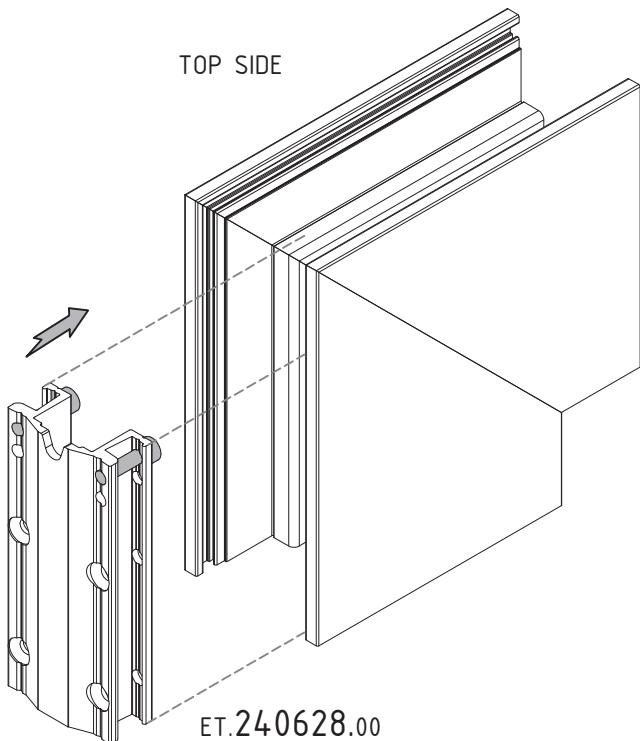

ALWAYS TAKE CARE THAT THE HEAD OF THE SCREW (FIXED ONTO ET.240627.00), IS CONTACT WITH THE PLASTIC PROFILE FIXED ONTO THE LOWER HORIZONTAL PART OF THE SASH FRAME, AS PRESENTED IN THE DRAWING. ONCE THIS IS DONE FIX ET.240627.00 ONTO THE SASH FRAME USING FOUR (4) COUNTERSUNK SHEET METAL SCREW 4.2x36mm DIN 7982, AS PRESENTED IN THE DRAWING

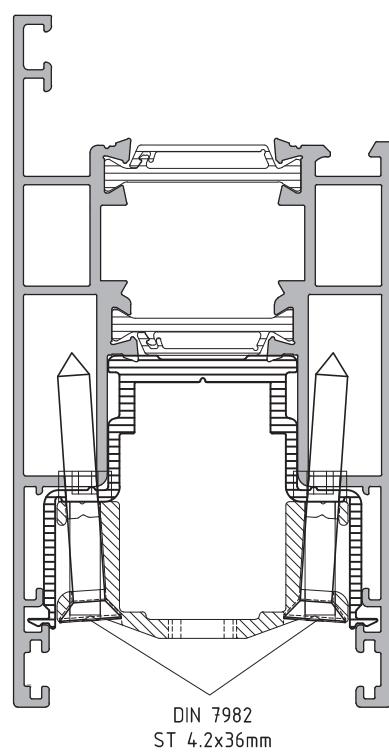

DIN 7982  
ST 4.2x36mm

FIXING STOP ON E50201 & E50202 (TOP SIDE)

M50-47

ET.240628.00, IS ALWAYS PLACED AT THE TOP SIDE OF THE SASH FRAME E-50201 & E-50202, AFTER PLACING THE SASH FRAME ONTO THE RAIL. ALWAYS TAKE CARE THAT THE HEAD OF THE SCREW (FIXED ONTO ET.240627.00), IS CONTACT WITH THE PLASTIC PROFILE FIXED ONTO THE TOP HORIZONTAL PART OF THE SASH FRAME, AS PRESENTED IN THE DRAWING. ONCE THIS IS DONE FIX ET.240627.00 ONTO THE SASH FRAME USING FOUR (4) COUNTERSUNK SHEET METAL SCREW 4.2x36mm DIN 7982, AS PRESENTED IN THE DRAWING

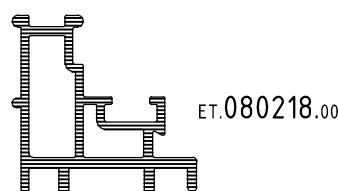

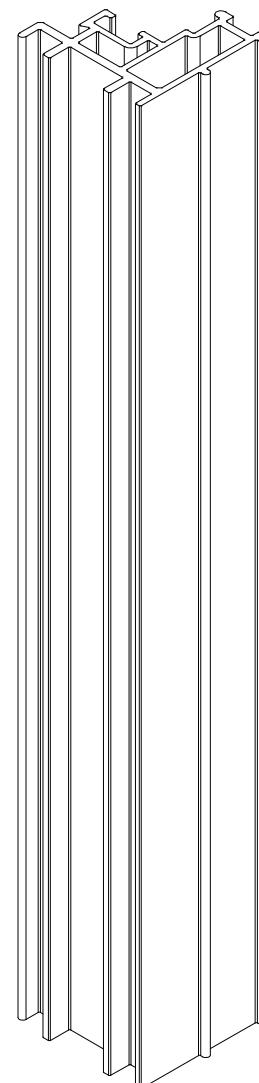

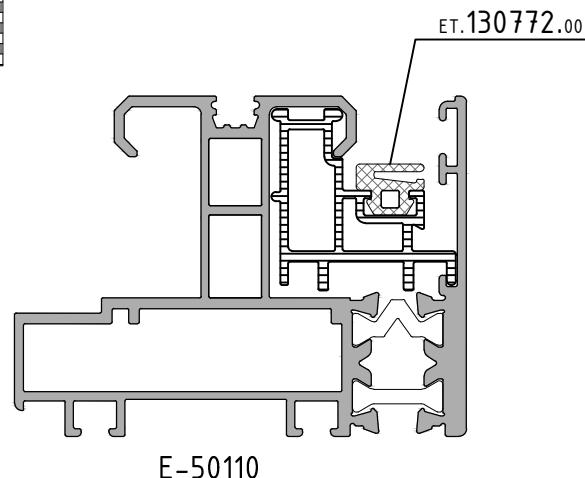

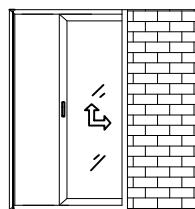

# sliding system with thermal break

## INSTRUCTIONS FOR FITTING E50301 on frame E50150

M50-60

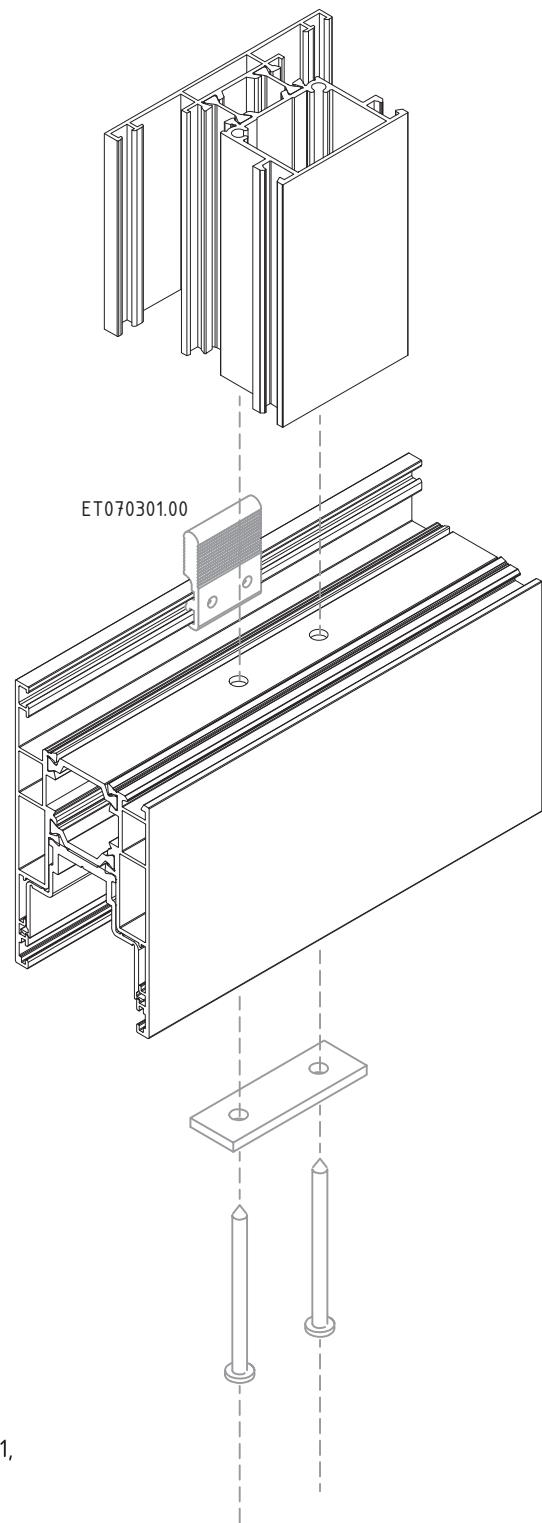

## INSTRUCTIONS FOR FITTING E50301 on sash E50203

M50-61

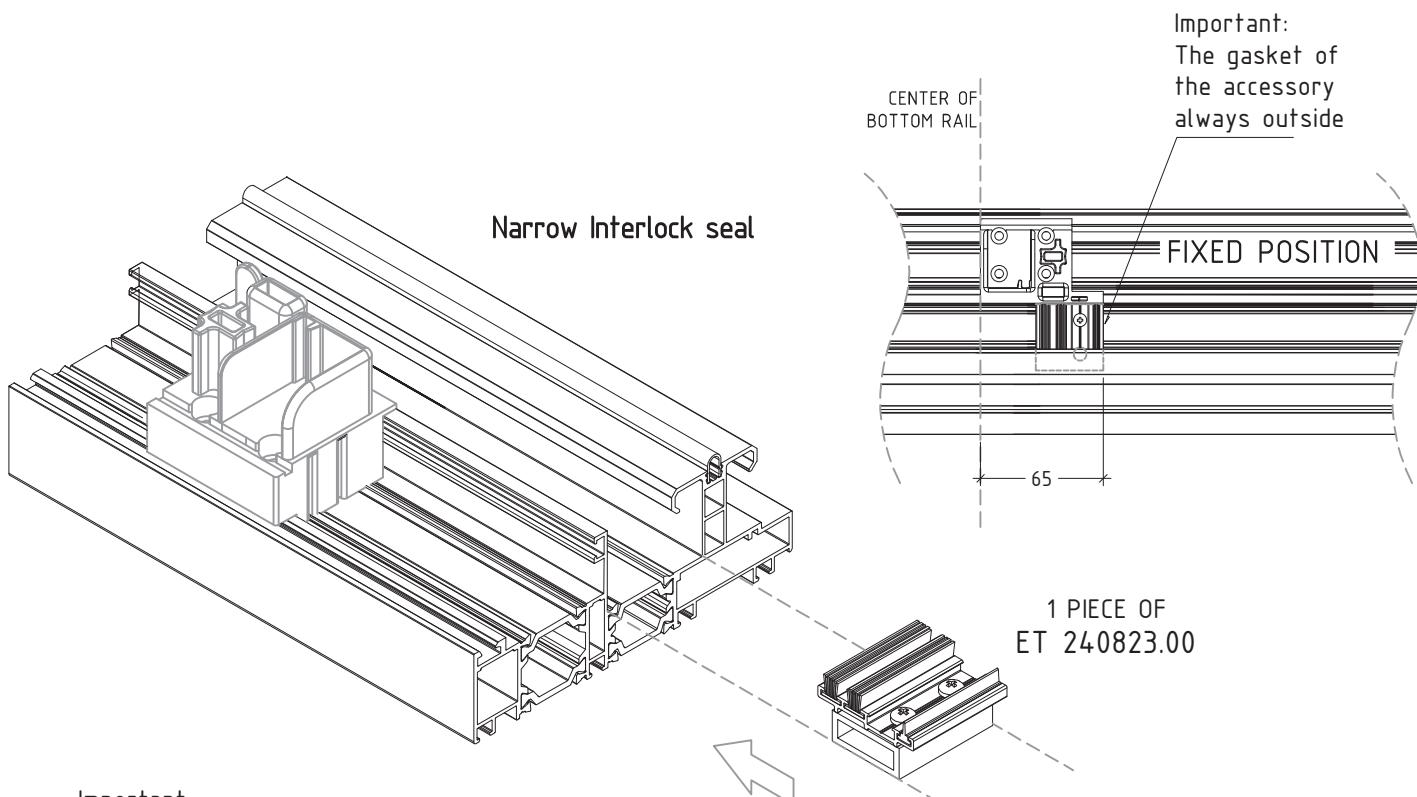

**IMPORTANT:**  
When need "T" profile E50301,  
always use sash E50203.

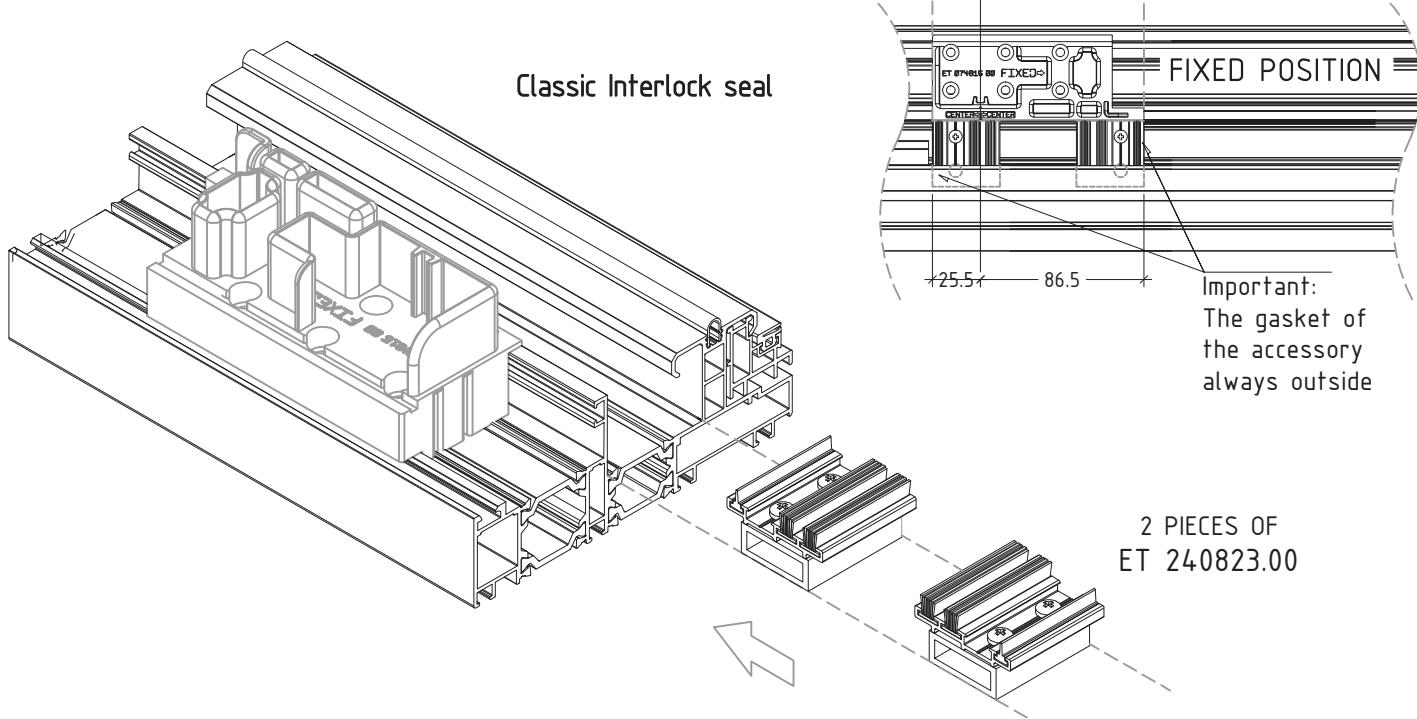

INSTRUCTIONS Monorail simple sliding (Not L&S) bottom interlock seal

M50-62

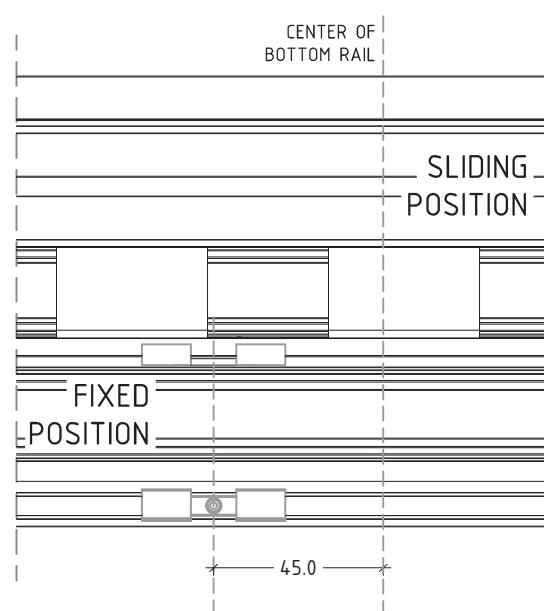

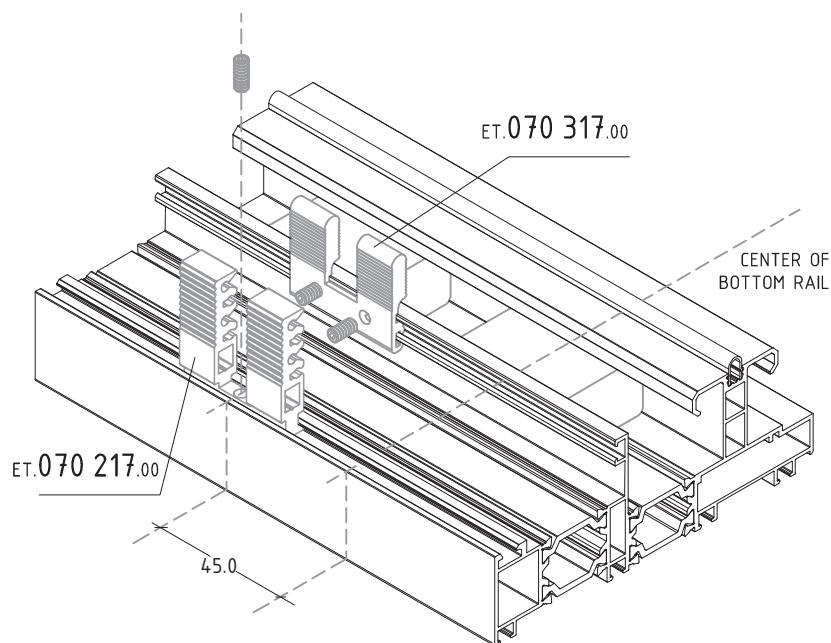

Important:  
You need to slide the accessories in the E-50150 profile before close the frame.  
Fix with glue and seal around with silicone

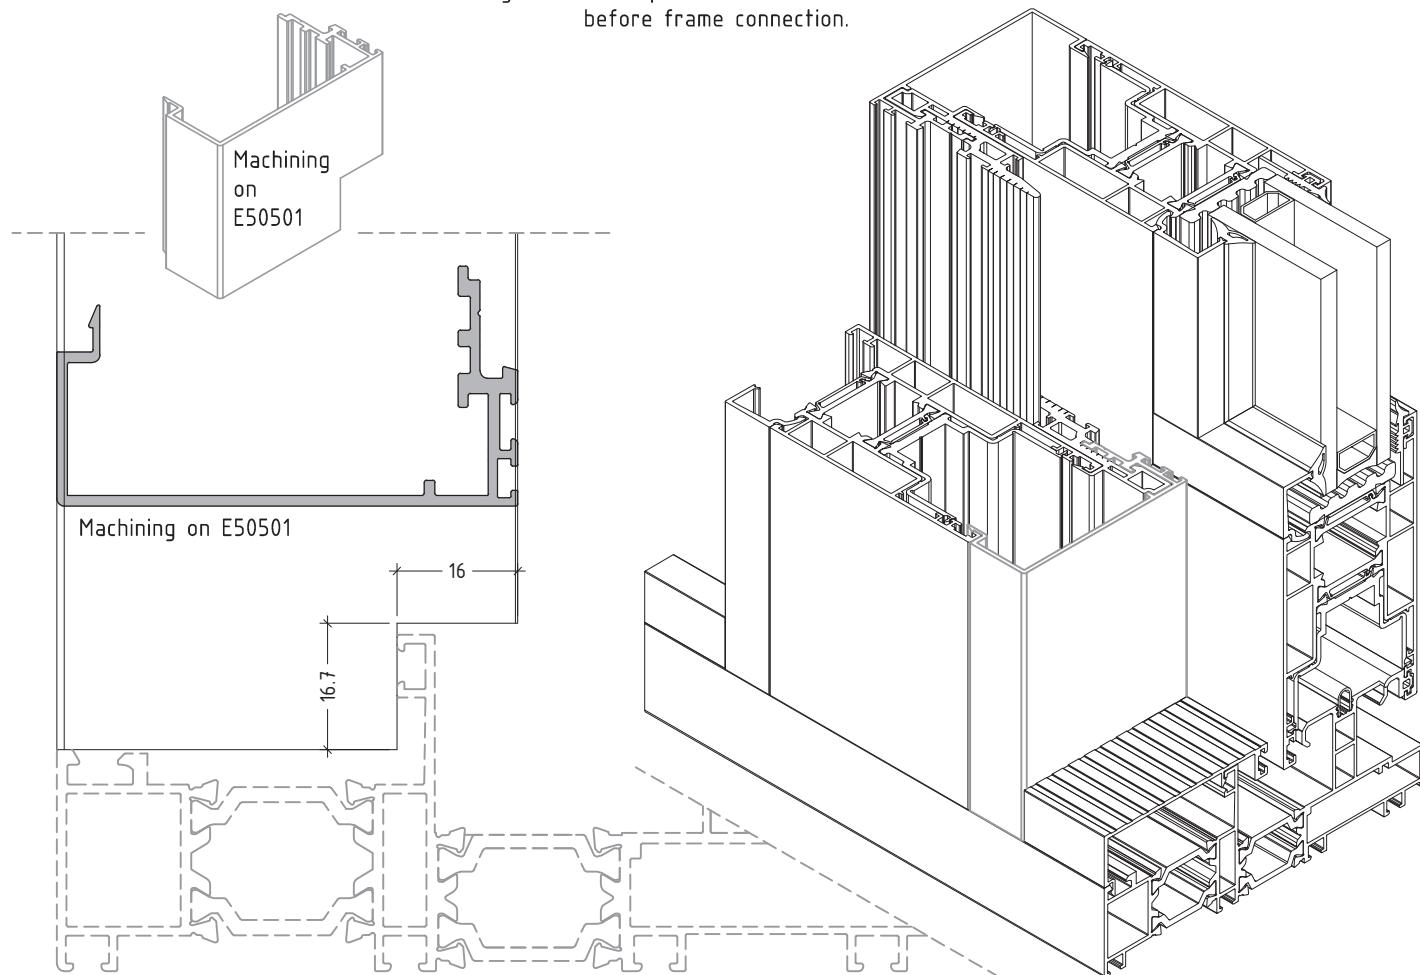

## INSTRUCTIONS Monorail - Alternative Connection through Aluminum brackets

M50-65

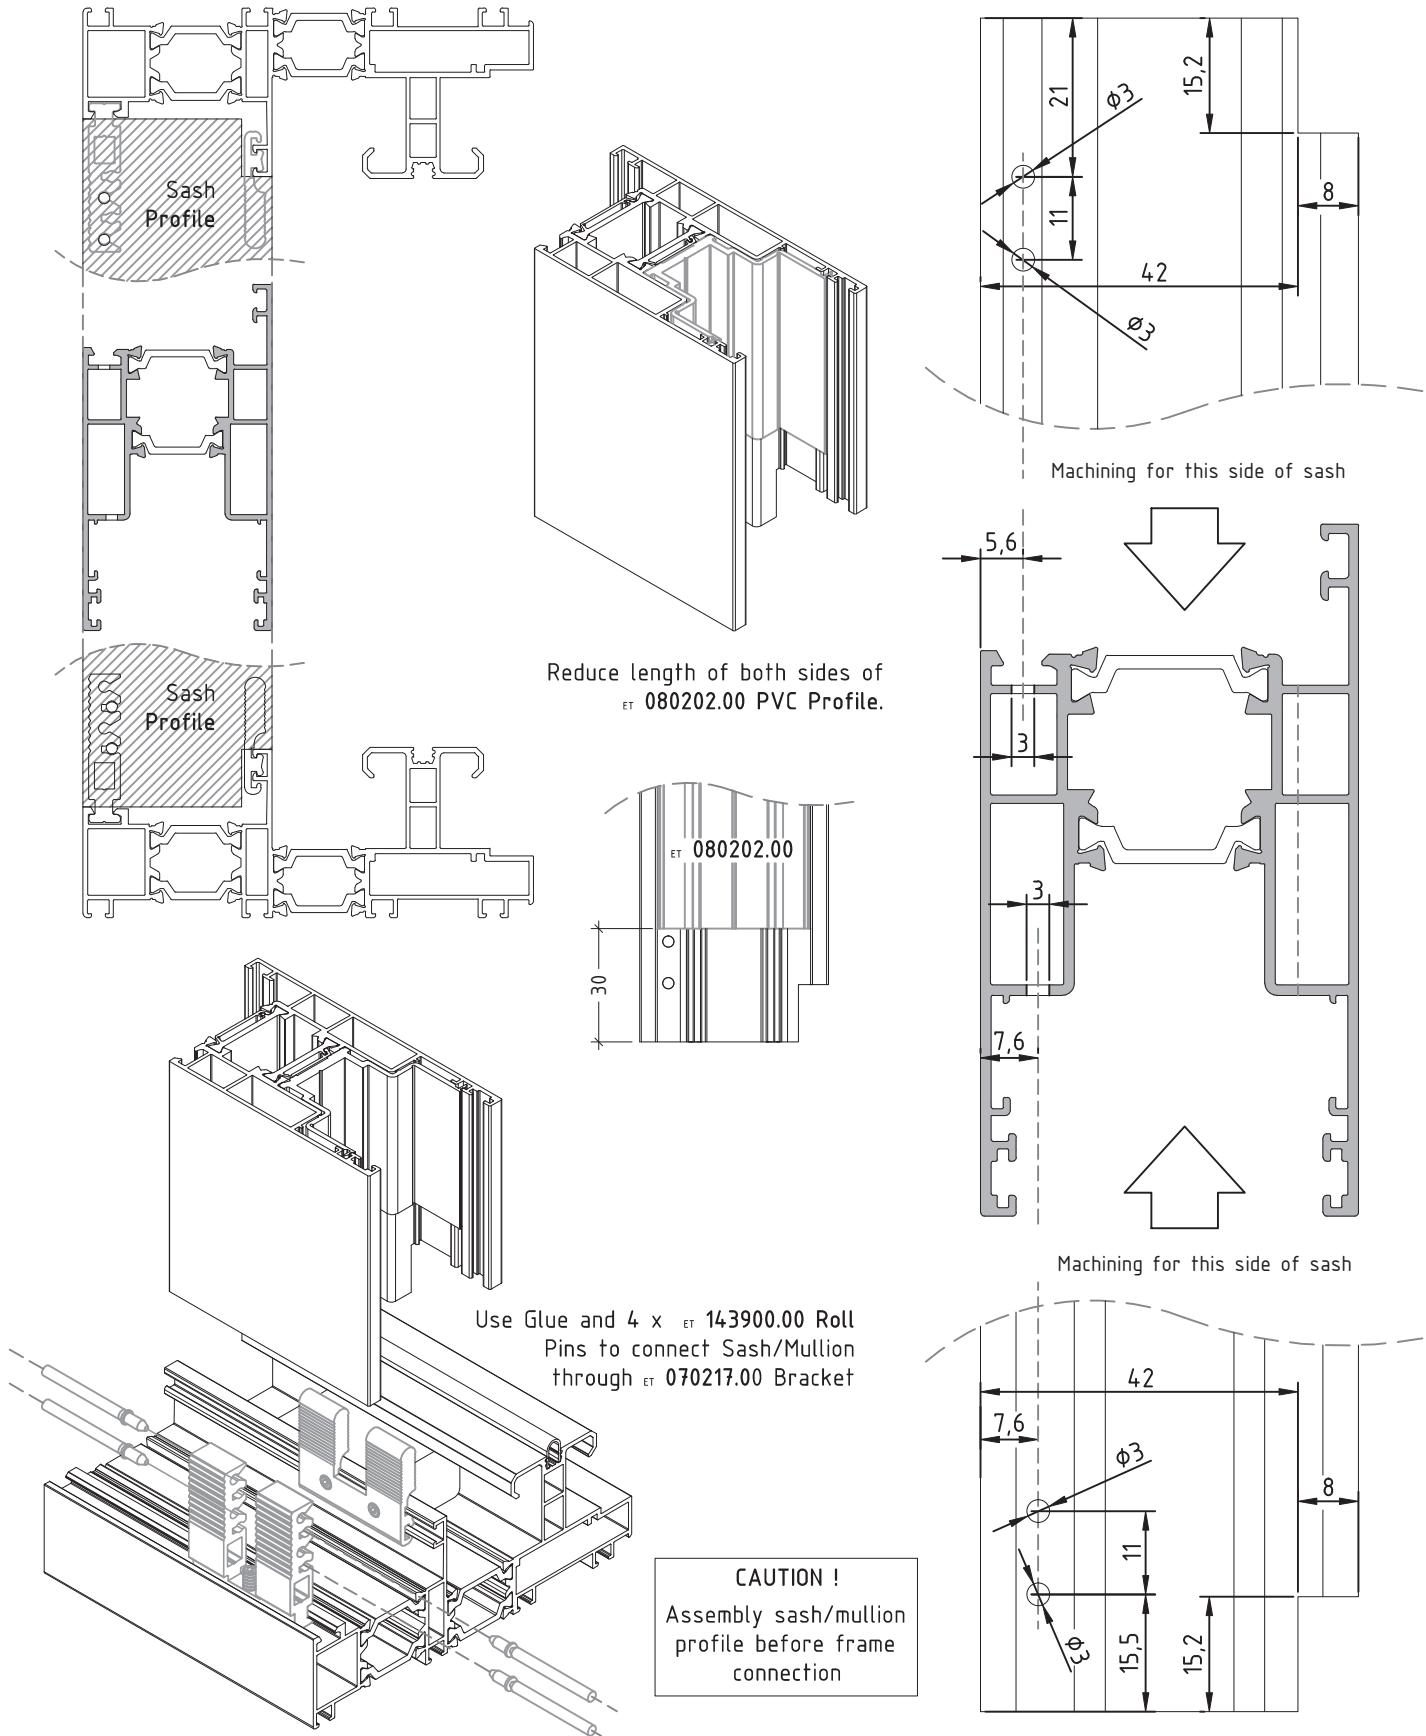

Slide Both  $\text{ET } 070217.00$  and  $\text{ET } 070317.00$   
in the grooves of top and bottom rails  
before frame connection.

# **CE MARKING**

STANDARDS / PERFORMANCE CHARACTERISTICS

# CE MARKING

## WHAT DOES THE SIGN CE MEAN?

It is an abbreviation of the French "Conformite Europeene" – i.e. European Conformity. By placing the CE marking the manufacturer declares that the product complies with the general safety requirements set out in the Construction Product Regulation 305/2011.

## WHAT IS THE PURPOSE OF CE MARKING?

The CE marking represents "the European passport" of the product, its main objectives are:

CE is a declaration by the manufacturer that the product meets the essential requirements of relevant European legislation relating to health, safety and environmental protection;

CE indicates to officials in relevant ministries and departments that the product can be put on the market lawfully in the country;

CE ensures free movement of goods within the EU and the European Free Trade Association (EFTA);

CE permits the withdrawal of products that do not meet the standards by monitoring and custom authorities;

Marking with the CE mark is necessary in cases where the product is distributed within the internal market.

## WHAT ARE THE REQUIREMENTS FOR THE CE MARKING?

Doors, windows and gates (except those intended to be used for internal communication only, for fire/smoke compartmentation and on escape routes) are covered by System 3 of assessment and verification of constancy of performance.

According to the Construction Product Regulation 305/2011, this system sets the following duties:

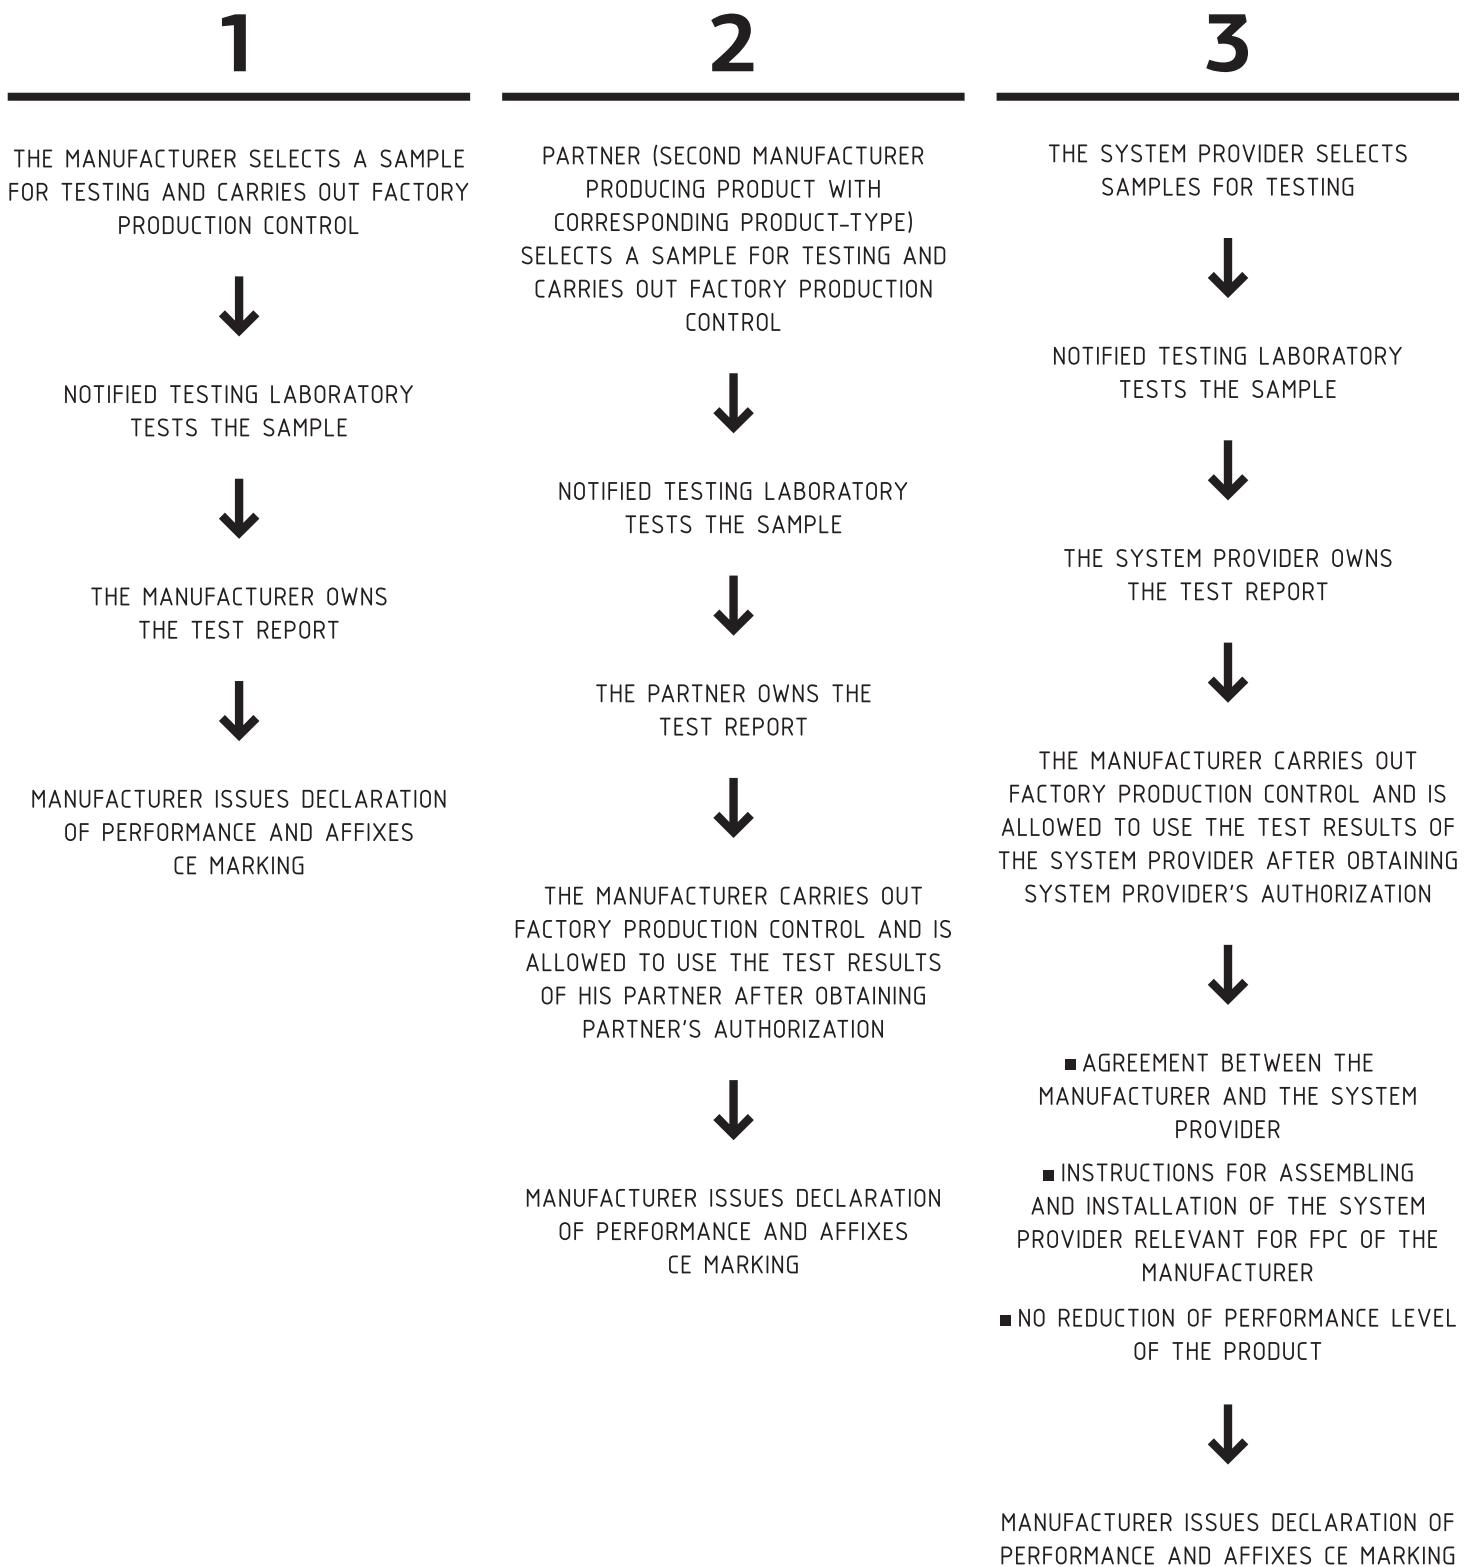

| Tasks to be performed by the manufacturer | Tasks to be performed by Notified testing laboratory   | Conformity assessment (the basis for CE marking, which is set by the final producer)                          |
|---|--|---|
| factory production control - FPC          | Determination of the product type on the basis of type testing, type calculation, tabulated values, etc. | Declaration of performance issued by the manufacturer or his authorized representative based on test results. |

## LEGAL ACTS

- Construction Products Regulation (305/2011/EU – CPR) – replacing the Construction Products Directive (89/106/EEC – CPD)
- EN 14351-1:2006+A1:2010 – Windows and doors – Product standard, performance characteristics – Part 1: Windows and external pedestrian doorsets without resistance to fire and/or smoke leakage characteristics

# MAIN METHODS FOR OBTAINING TEST RESULTS BY THE MANUFACTURER

According to the Construction Product Regulation 305/2011 there are three main options for the manufacturers of windows and doors to obtain test results.

# STANDARDS

## GENERAL

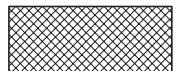

- EN 12020 (1÷2) – ALUMINIUM AND ALUMINIUM ALLOYS – EXTRUDED PRECISION PROFILES IN ALLOYS EN AW-6060 AND EN AW-6063
- EN 755 (1÷9) – ALUMINIUM AND ALUMINIUM ALLOYS – EXTRUDED ROD/BAR, TUBE AND PROFILES
- EN 573 (1÷3) – ALUMINIUM AND ALUMINIUM ALLOYS – CHEMICAL COMPOSITION AND FORM OF WROUGHT PRODUCTS
- EN 1990 EUROCODE – BASIS OF STRUCTURAL DESIGN
- EN 1991 EUROCODE 1 – ACTIONS ON STRUCTURES
- EN 1998 EUROCODE 8 – DESIGN OF STRUCTURES FOR EARTHQUAKE RESISTANCE
- EN 1999 EUROCODE 9 – DESIGN OF ALUMINIUM STRUCTURES

## WINDOWS AND DOORS

1. EN 14351 – WINDOWS AND DOORS – PRODUCT STANDARD, PERFORMANCE CHARACTERISTICS
2. EN 12519 – WINDOWS AND PEDESTRIAN DOORS – TERMINOLOGY
3. EN 12207 – WINDOWS AND DOORS – AIR PERMEABILITY – CLASSIFICATION
4. EN 1026 – WINDOWS AND DOORS – AIR PERMEABILITY – TEST METHOD
5. EN 12208 – WINDOWS AND DOORS – WATERTIGHTNESS – CLASSIFICATION
6. EN 1027 – WINDOWS AND DOORS – WATERTIGHTNESS – TEST METHOD
7. EN 12210 – WINDOWS AND DOORS – RESISTANCE TO WIND LOAD – CLASSIFICATION
8. EN 12211 – WINDOWS AND DOORS – RESISTANCE TO WIND LOAD – TEST METHOD
9. EN 1191 – WINDOWS AND DOORS – RESISTANCE TO REPEATED OPENING AND CLOSING – TEST METHOD
10. EN ISO 10077 (1÷2) – THERMAL PERFORMANCE OF WINDOWS, DOORS AND SHUTTERS – CALCULATION OF THERMAL TRANSMITTANCE
11. EN 12412-2 – THERMAL PERFORMANCE OF WINDOWS, DOORS AND SHUTTERS – DETERMINATION OF THERMAL TRANSMITTANCE BY HOT BOX METHOD – PART 2: FRAMES
12. EN 13115 – WINDOWS – CLASSIFICATION OF MECHANICAL PROPERTIES – RACKING, TORSION AND OPERATING FORCES
13. EN 1627 – WINDOWS, DOORS, SHUTTERS – BURGLAR RESISTANCE – REQUIREMENTS AND CLASSIFICATION
14. EN 1628 – WINDOWS, DOORS, SHUTTERS – BURGLAR RESISTANCE – TEST METHOD FOR THE DETERMINATION OF RESISTANCE UNDER STATIC LOADING
15. EN 1629 – WINDOWS, DOORS, SHUTTERS – BURGLAR RESISTANCE – TEST METHOD FOR THE DETERMINATION OF RESISTANCE UNDER DYNAMIC LOADING
16. EN 1630 – WINDOWS, DOORS, SHUTTERS – BURGLAR RESISTANCE – TEST METHOD FOR THE DETERMINATION OF RESISTANCE TO MANUAL BURGLARY ATTEMPTS
17. EN ISO 717-1 – ACOUSTICS – RATING OF SOUND INSULATION IN BUILDINGS AND OF BUILDING ELEMENTS – PART 1: AIRBORNE SOUND INSULATION
18. EN ISO 10140 – ACOUSTICS – LABORATORY MEASUREMENT OF SOUND INSULATION OF BUILDING ELEMENTS

# LIABILITY

The stated data and calculating methods are provided by ETEM as a guideline only.  
The information given in this catalogue does not substitute all applicable regulations –  
Eurocodes, harmonized European standards, national or regional building codes.

The specific conditions and technical details of every particular project have to be taken into consideration.

The right choice of all elements as well as any special requirements regarding stability of the structure must always be considered by the structural/façade engineer, responsible for the project.

The solutions presented in these pages are indicative and can not cover all possible project cases. Because of that every single project has to be evaluated by the structural/façade engineer in charge taking into consideration the specific features, such as climate conditions, location, orientation, etc.

ETEM is not liable for any calculations and conclusions made on the basis of the stated information. All calculations and specifications must be estimated, endorsed and guaranteed by architect, engineer, professional or legal entity authorized by law for such activities.

# COPYRIGHT
